The Supreme Court, in handing down its decision, said that the Minimum Wage Law discriminates in favor of women, and that discrimination is unconstitutional; and that, furthermore, women are now on an equal political basis with men and do not need special legislation.

There is, of course, no danger that conditions in America will become again as bad

as Dr. Ely describes, but women are the mothers of the race, and the whole future of civilization depends upon their physical, mental, and moral welfare, and upon the welfare of their children. Therefore, they do need special protection, and no reasonable legislation giving that protection to both farm and city women and children is out of place.

Another act that is before the New York State Legislature of special interest to women is the Sheppard-Towner Maternity Bill. The Sheppard-Towner Act is a Federal law which provides for Federal funds to those States which raise duplicate funds to help reduce the deaths of mothers in childbirth and their babies. Twenty-two States have already passed an enabling act to raise funds in cooperation with the Federal Government for this purpose.

The United States stands seventeenth in the list of civilized countries in its maternity death rate and sixth in infancy mortality. Two-thirds of the women who lose their lives through childbirth, and one-half of the babies who now die in the first year of life, could be saved, physicians estimate, if women had proper advice and care. Under the proposed legislation, the service to mothers would be furnished through the State Department of Health and the local health authorities.

Unfortunately, the bill has been defeated in the New York State Senate. It can be passed next year if the women insist on it.

A Curious Idea

WE have often wondered why the great majority of people seem to think that the editor's biggest job is to fill up space. As a matter of fact, each inch of space in any good magazine is worth many dollars, and it takes considerable thought to get material in that space which will justify the high cost of printing it. We have to laugh sometimes when some one thinks he is conferring a real favor upon us by handing us something "to fill up space." For instance, the editorial office of American Agriculturist receives each month one hundred or more well-written articles, most of them of considerable length, for which pay is expected. These articles are all carefully read, and a very few of the best, probably less than 5 per cent, are bought for publication. The mere task of reading them takes a great deal of time.

Most first-class publications also have a regular list of contributors who are paid by the month, or issue rather, than for each article. When the material from these writers comes in, it is all carefully read and often cut down to fit space requirements. Then, in addition to the material for which pay is expected, we receive several hundred articles every week, propaganda and publicity for one cause or another, that the writers hope we will publish to further the cause they are advocating. Very little of such material is printed in American Agriculturist, and none of it except that which is rewritten and reedited to make it more interesting and valuable to our own particular class of readers.

The difference between a good publication and a poor one is largely due to the care taken in the editorial offices to weed out the great mass of poor stuff and select from it a little material of high quality which is particularly adapted to the needs and the interest of the people of that particular magazine. We are always glad to give consideration to articles and to new ideas, but we have often wished, when some of our friends handed us something, that they could be in our office in the morning and watch the armfuls of mail coming from hundreds of writers, all having the same idea of helping "to fill up space."

The Abiding Place of Little Children

American Agriculturist Radio Address on Home Making and Home Bureaus

By MRS. A. E. BRIGDEN

IN these days of unrest and dissatisfaction, too much insistence cannot be put on the value of the home and of the home-maker's place in the scheme of life, in the community and in the nation. The finest palace filled with every luxury does not constitute the home, while a tent and unselfish love is the abiding place of happiness and a safe place for little children. As never before, home making needs to be dignified as a profession, and it will be only when the women themselves realize the importance of their own calling.

Eighty-five per cent of the girls in our schools will follow the occupation of making a home. Ninety per cent of men's earnings is spent by women dependent upon them, most of whom have never had any real training on how to spend money advantageously. Ninety per cent of legacies left to women is lost to them in seven years because they have never been trained in business habits. It seems a tremendous economic oversight that remedies have not been provided for situations like these upon which the success of the home is dependent.

Have Brought the Home Bureaus Into Being

These are some of the problems of concern, not only to those living on the farms, but to women wherever they may be, and it is problems such as these that first brought the Home Bureaus into being. The Home Bureau is not necessarily a rural organization, for it is concerned with the problems of home making which are fundamentally the same in both city and country. There are already three splendid city Home Bureaus in New York State, one of which is the largest organization of its kind in the United States. The Home Bureau is the partner of the Farm Bureau, and, being composed of women, it surely will never be a "silent partner." Indeed, as time goes on, one may expect to hear its voice more and more, calling attention to the importance of home making and its problems, the greatest profession in all the world.

Farming as a business is very intimately related to the farm home. No other business has such a peculiar relation to the home life. A man in the city may have his business in the most undesirable surroundings, but still have his home where life is full and rich. But on the farm the barn and the home are side by side, and cannot be separated. Hence, since the home cannot be moved to where fit living conditions exist, then such conditions must be brought to the farm home where they are not already present.

The Farm Home and the Farm Business

The thing of supreme importance to the welfare of the farm home, and therefore to the nation, is that farming be made a paying business. One class in society cannot expect to work eight hours a day at a living wage when another and important group work fourteen to sixteen hours for a bare existence at a business that requires skill and training, especially when that business is so closely related to the very future of our nation's existence. It is fundamental that farming be made to pay if the farm home is to be a permanent one and the right sort of people kept on the farm, for it is from the farm home of the past that the cities and the nation have drawn some of their best blood.

If living conditions on the farm are not such to make the farm a desirable place to give farm children their preparation for life, farm women are pledged through organizations like the Home Bureau to see to it, as

far as it lies in their power, that those conditions are changed. So wonderful is the contribution of the open country to living, however, that, in spite of all handicaps, it must still remain the best place for a real home and the best place to rear children.

The Primary Interest of the Home Bureau

In the Home Bureaus, as well as the Farm Bureaus, the primary interest is to bring about a better economic situation in rural life, for the first problem in raising the standard of life of any people is to give those people adequate pay for the service they render. But the Home Bureaus go beyond the economic situation to those problems of country life like the rural church, the rural

If You Like These Talks, Write Us

IF you like to read something that gets right down to where you live, you will like the splendid address of Mrs. A. E. Brigden, President of the New York State Federation of Home Bureaus, which is printed on this page. Mrs. Brigden broadcast this talk from the WEA station at 6:30 standard time, Wednesday evening, May 2d. In our opinion, Mrs. Brigden's talk on the farm home and its problems brings out some of the best things that have been said and read about the home in a long time.

This address is another one of the series of talks by farm and home leaders which is being given farm people through the cooperation of American Agriculturist with the American Telephone and Telegraph Company through the broadcasting station WEA. We are receiving a lot of letters. The questionnaires which we asked you to fill out about radio are being returned in good numbers. Folks all through our territory are talking about our radio service. All of which shows that farm people are tremendously interested in the possibilities of the radio and are willing to cooperate with us and with the broadcasting station to get radio programs which will be of special interest and value to country folks.—The Editors.

school, rural health conditions, rural libraries, and rural recreation. Most of these problems have already been solved in the city; they yet remain to be done in most country communities, and the rural women, through organization, are just beginning to set their shoulders to the task.

Not the least of the problems of rural women is that of isolation and loneliness, and the Home Bureau has helped to bring them closer to each other. Already in its early history it has developed initiative, latent talent for leaderships, and afforded opportunity for self-expression and a chance to voice efficiently opinions where such opportunity is desirable.

Three Years of Effort for Better Schools

The Home Bureau, through its representation on the Committee of Twenty-one, has worked for three years to bring about plans for the betterment of rural schools. The bureaus have rendered valuable service on this committee and are satisfied that there is no reason why a child in the country should not have the same educational facilities as the child in the city. For forty years the betterment of rural schools in New York State has been under consideration without any very special accomplishments. The women on the farms are insisting to-day that there should be no longer delay. They are urging with a greater persistence than

any other farm organization that the Downing-Hutchinson Bill, containing the suggestions for rural-school improvement made by the Committee of Twenty-one, shall be passed immediately.

Possibly all that I have tried to say about the home and what the Home Bureau is trying to do for it is summed up in the Home Bureau creed, which I wish might be hung on the wall of every home maker. This Home Bureau creed is: "To develop the highest ideals of home and community life; to count children the most important of crops; to so nourish them that their bodies may be strong, their minds clear, their spirits happy, and their characters generous. To place service above comfort, to let charity supplant hatred, to let loyalty to high purpose silence discordant notes, to be discouraged never, to believe one's community may become the best of communities, and to work together for a more abundant home and community life."

This creed visualizes some of the ambitions of the State Federation of Home Bureaus, which is simply a union of home makers, pledged to the enrichment of home life and to the betterment of that larger housekeeping which reflects itself in the home of the community. It has been said that the only difference between the difficult and the impossible is that the impossible takes a little more time. Then I suppose that the best thing that women can do as a factor in bettering living conditions on the farm or in the city is to attempt the impossible and work together to bring in the golden age when every home will be developed "into an institution economically sound, mechanically convenient, physically healthful, morally wholesome, mentally stimulating, spiritually inspiring, and socially responsible—a center of unselfish love."

Quotations Worth While

LET us try to remember through the whole course of this inquiry into the relations of States to States . . . that the prospect of improving the relations of States and peoples to one another depends ultimately upon the possibility of improving human nature itself. Communities are nothing at all except so many individual men and human nature will advance no further in communities taken as a whole than the members of the communities themselves advance. Human nature in the civilized nations—and international advance can only go on if it goes on simultaneously in many nations—human nature can only be raised and sustained by the efforts of individuals. The citizens of a democracy can do everything if they express their united will. The raindrops that fall from the clouds unite to form a tiny rill, and, meeting other rills, it becomes a rivulet, and the rivulet grows to a brook, and the brooks as they join one another swell into a river that sweeps in its resistless course downward to the sea. Each of us is only a drop, but together we make up the volume of public opinion which determines the character and action of a State. What all the nations now need is a public opinion, which shall in every nation give more constant thought and keener attention to international policy. . . . All nations are the children of one Father in heaven.—VISCOUNT BRYCE.

Concerning Hedgerows

"And The Stone Wall Thereof Was Broken Down"

"I WENT by the field By J. VAN WAGENEN, JR. them is becoming of the slothful and wonderfully large.

by the vineyard of the man void of understanding and, lo, it was all overgrown with thorns, and nettles had covered the face thereof, and the stone wall thereof, was broken down. Then I saw and considered it well: I looked

upon it and received instruction." — Solomon the Wise.

J. VAN WAGENEN, JR.

The bygone masters of Hillside Farm bequeathed to us along with the old fields some miles of rambling stone walls. I remember the Pennsylvania farmer who declared concerning his farm that "if all the dirt was salt and all the stone was pork, there wouldn't be salt enough to save the pork." I pass this on as a happy example of whimsical exaggeration. Well—Hillside Farm was never as bad as that. It was never stony as compared with many New England fields or with much of that belt of farm land that makes up the borders of the Adirondacks but it was at least sprinkled with "hard-heads,"—granite boulders brought down from the northeast by the glacial ice-sheet so that most of our fields were fenced with stone walls.

My father used to tell me that in his youth it was regarded as a rather

My father's memory ran back well before the middle of the last century and he told me that never within his time had any considerable number of rails been split on our farm. I feel sure that nearly all of them are at least a hundred years old and all that time they have lain out through summer heat and winter tempest. They are gray and bleached without. But within, they are as bright and fragrant as when the pioneers rove them in the days when the last century was very young. I wonder if we—you and I—are doing anything on our farms to-day that will cause men to remember us and to speak of us with tenderness a hundred years from now.

What wonderful wood that old pine was, light, elastic, fragrant, time-defying, with a grain like satin ribbon. We shall never see the like again. An oak rail sags in the middle and becomes crooked and warped with the years but a pine rail remains to the end as straight as an arrow and as elastic as a steel spring. I am told that there is absolutely no satisfactory substitute for white pine for pattern making and that this use alone will ultimately consume our reserve supply of this noble wood. What a pitiful remnant of our one-time forest remains in the eastern States. How we have squandered our imperial heritage. But after all we cannot blame our forefathers because for the first two centuries of American settlement men could regard trees only as enemies to be gotten rid of in every possible fashion. The greater part of the best of our eastern forests were never utilized. They were felled in

The Stone Wall—One of the monuments to the patient labor of our forefathers.

fortunate fact that our farm "had stone enough to fence it." Today I cannot but stand in wonder and admiration at the stupendous toil that went into those walls. Not only were the surface stone gotten out of the way but as far as possible all that interfered with the plow were dug and pried out and hauled to the walls, often by two ox-teams hitched tandem. Very many of them were first blasted with black powder long before the days of dynamite.

One of the very earliest recollections of my farm boyhood is James Barker patiently using the churn drill, taking several hours to get a hole a foot in depth, then loading it with powder, tamping it down with the dust from the drilling and firing it with the old uncertain fuse. I think a day was frequently given to the job of getting a single stone broken up enough so that it could be handled with a couple of teams. In those days there were not lacking men skilled in the rough masonry of laying stone walls.

Some of the walls on our farm were high enough so that nothing on top was needed but many of them were "staked-and-ridered" with pine rails. The farm once had thousands of these ancient rails and there are a good many of them left yet. But I note with sorrow that, like the veterans of the Civil War, the annual death-rate among

windrows, the fire run through the fallen mass, and then the blackened trunks drawn together in great heaps for the burning. The most inconceivable thing is how in the world a heavily wooded country was ever conquered for the plow.

Well, these musings have come about because during the last two weeks most of our spare time (if there is ever any such thing as "spare time" on a farm) has been devoted to getting rid of one of the long stretches of stone wall that my grandfathers piled up. From time to time we try to tackle this sort of a job because with modern machinery large fields are more important than of old, and because in the end, all stone walls tend to fall down and revert to hedgerows such as Solomon was thinking about in the quotation which stands at the head of this article. Then, too, during the years we have had the bad habit of picking off the loose stone and throwing them in a windrow against the base of the wall because it was the easiest way to get rid of them.

The worst enemy of stone walls is the heaving of the frost and because it draws out first on the sunny side while the shaded side remains frozen, our stone walls tend to topple over to the south at this time of year. A fallen stone wall not only ceases to serve its original purpose but becomes merely a refuge for woodchucks and a propagat-

J. KEIFFORD HALL, R. No. 1, REID'S GROVE, MD.

ing nursery for hedgerow plants that cannot be close cut or trimmed.

With us there seems to be about four species of hedgerow plants that are far more numerous than all the others. But I suppose that the number and the species will vary greatly in different localities. With us, everywhere and always when protected from grazing, the wild red raspberry runs riot although there are regions where it is an unusual plant. Then there is the so-called "red-willow," really a dogwood with very slender and at certain seasons almost brilliantly red branches. Then there is the humble but omnipresent choke cherry; and last the elm, —most beautiful and distinctive of all our native trees and yet the greatest nuisance when out of place. Raspberry bushes can be plowed rather more easily than heavy alfalfa. A good, steady, powerful team can rip and tear through almost any growth of red-willow or choke cherry but it takes only a small elm sapling with roots tough and fibrous as white-leather to hold up anything short of a locomotive.

So we have been wrestling with the destruction of this old wall which men once labored so hard and patiently to build. Where the bad habit of always plowing around a field and throwing the furrow against the fence has been followed it will often be found that there is more wall below the surface than above.

The stone we are putting to a new and I hope a better use by drawing them to the bank of the pasture brook where we have made the beginnings of an ice pond. This clearing up of walls and hedgerows is a job that we have done a good deal of within my memory. With us, clearing up a wall means first cutting down any brush that may be in the way, then drawing all the stone small enough to be readily loaded on a wagon. Then comes the digging around and prying up and loading on a stone boat all the big ones in sight, and then the use of the plow which never fails to reveal an astonishing crop of unseen stone. The plow should be accompanied by the bar and pick to get out of the way and throw to the surface all loose stone. Finally the ground should be harrowed and reharrowed many times and all fast roots cut off and the rubbish picked up and burned. With the best of effort it will not be very nice going for two or three years but ultimately you will come to forget where the old wall was.

Now measured in terms of dollars and cents I don't know that this work pays. In these days of high priced labor, it costs tremendously to reclaim land in this way—far more than to go out and buy it by the acre. Both Prof. Roberts and that later authority on farm management, Dr. Warren, agree that to paint a barn is a luxury and not an investment. I expect that clearing up old walls and hedgerows falls into the same category. But I confess to a keen sense of satisfaction as I see the fields widen and the corn rows run where once in the tangle, the woodchuck dug his hole. I find no work quite as fascinating as this expensive method of adding acreage to the old farm.

Famous Guernsey Cows

France's Bellinda of Big Spring farms is in seventh place in Class AA by producing 15,517 pounds milk and 782.76 pounds butterfat. The remarkable part of this record is that when she was purchased by Harry Atwood of Bolton, Mass., she was on test, and although he had never done testing before, he retained the cow on test. In addition to going through the moving process from Campton, N. H., to the Langwater Farm sale, thence to Bolton, Mass., she dropped a calf 17 days before the test was completed. During all these changes she showed wonderful peace of mind and persistency in production.

Plenty of space in your pocket for this compact model—an unusual opportunity to use it on your farm.

No. 1 Pocket Kodak Series II Fixed Focus Model

Pictures of ploughing, sowing and the growth of crops have worth while value not alone for immediate interest but for year to year record and comparison; while those that help sell live stock bring definite dollars and cents return. Pictures made the Kodak way are authentic records—you can date and title each film at the time through the agency of the Autographic feature.

No. 1 Pocket Kodak Series II gives you such pictures with a new convenience. Release the catch, pull down the bed and simultaneously the lens springs into position. All you have to do is trip the shutter and take the picture home.

Pictures $2\frac{1}{4} \times 3\frac{1}{4}$ inches—Price \$13.50

Like water off a duck's back, rain runs off the steel case of the Columbia Hot Shot Battery. Waterproof, storm-proof, rust-proof. Simple—Can't get out of order. Can't be bumped out of commission. Always a prompt, hot spark. Power in it for a good long time. Yet, the steel case Columbia Hot Shot costs no more than a fibre case battery. It's worth demanding.

Columbia Dry Batteries

—they last longer

Columbia Dry Batteries for every kind of service are sold at electrical, hardware and auto accessory shops, garages, general stores. Insist upon Columbia.

Saving Time and Space

Efficiency in Intercropping Vegetables

INTENSIVE gardeners frequently save land, labor and plant food by arranging for more than one crop to occupy the ground at the same time. One fairly common plan calls for setting early cabbage in rows, say 30 to 36 inches

By PAUL WORK

is \$18.25 and for three applications, \$27.38,

assuming 12,000 plants per acre. In the experiments the value of cabbage from treated plots was \$190 higher than untreated plots. This large increase was partly due to the fact that the treated plants were earlier and commanded higher price on the market. With 600 plants set in each area, the treated block gave 573 heads weighing 1,245 pounds, worth by actual sale, \$27.40. The untreated plot yielded 472 heads weighing 916 pounds which sold for \$17.62.

PAUL WORK

removed by the time the main crop reaches good size. Some even go so far as to plant radishes between lettuce and cabbage. The radishes are then removed at four or five weeks, the lettuce at eight weeks, and cabbage-cutting begins at nine or ten weeks.

Another plan of inter-cropping allows crops to overlap for a few weeks, thus allowing two harvests when but one would otherwise be possible. Muckland gardeners sometimes plant two rows of lettuce 14 inches apart, then skip one and repeat. As the lettuce nears maturity, celery plants are set in the vacant row.

Inter-cropping is not without its disadvantages, each crop being more or less in the way of the other. Also there is almost sure to be some loss of space. It would be hard to realize much more than half a crop of lettuce between the cabbage. If the season will permit growing lettuce to maturity before celery is planted, there will be 50 per cent more plants of the first crop and the inconvenience in planting the one and harvesting the other will be avoided.

It is hard to lay down rules. Those who like inter-cropping find almost countless combinations, each with its own advantages. Those to whom the idea does not appeal get along very well with one crop at a time.

Fighting Cabbage Maggots

Maggots seem to be growing more troublesome as time goes on. These tiny "worms," or grubs, are really the larvæ which hatch from the eggs of certain flies. There are many species, different ones for different plants. The cabbage maggot fly appears about the time early plants are set in the field, and the eggs hatch in time to do serious damage. It is only recently that a satisfactory control measure has been devised. Corrosive sublimate in the usual one-to-a-thousand solution is applied around the stem of the plant, using about half a cup each. The first application is made as soon as the plants are set and a second week later. Sometimes a third is advisable. The liquid may be poured on with a dipper or cup. Of late special devices with nozzle and valve have appeared on the market.

The cabbage maggot is one of the worst foes of the early cabbage crop. Years ago, protection by means of tar paper disks was proposed and this method has been rather widely practiced, although it is costly and it is difficult to make them effective. The disks must be close to the ground and yet must not have soil on top. More recently the use of corrosive sublimate has been tried in several States and is being widely adopted.

"The Cabbage Maggot," Cornell Bulletin 413, by G. W. Herrick and Wallace Colman, reports recent experiments on the control of cabbage maggot by means of corrosive sublimate. The authors advocate two to three treatments, a week apart, beginning a few days after setting, applying each time a quarter of a teacup of 1,000 to 1 solution around the stem. The object is to wet the soil and stem with the solution. The cost per acre for two applications, including labor,

Cabbage Seed Treatment

Black-leg of cabbage attracted a great deal of attention last year through its wide prevalence and the serious losses which it caused. Doubtless conditions were especially favorable in 1922, but even though the season of 1923 may be less favorable for the fungus, the very general infection of last year is likely to make the danger greater than usual.

Black-leg is carried on the outside of seed coats, and also within the seed. It winters on dead material of cabbage and related plants. It is readily carried from field to field by horses, men, and equipment. Seed treatment, planting in fields that have not grown cabbage lately and care to avoid carrying, are all recommended precautions.

Seed treatment by hot water is advocated by Cornell pathologists. Ordinarily, and for most diseases, the seed is immersed in water at a temperature of 133° F. for ten minutes. If it is suspected that the seed is infected with black-leg it is suggested that water at 122° F. for thirty minutes be used. This latter takes care of the disease both within and without the seed coats. At the same time, it is rather drastic and it usually reduces the germination somewhat—sometimes as much as half, depending upon the viability and vigor of the seed before treatment. Hence it is necessary to have an ample supply of seed and to make a germination test after treatment as a guide to the rate of sowing.

Finishing Off Tomato Plants

The care of tomato plants during the week or ten days before they go to the field is of great importance. At this time they become crowded, the weather is warm and there is every opportunity for them to grow soft and spindling, unless the watering is managed with skill. Plants ought not to be allowed to wilt but a surplus of water is even worse. A soft plant will not withstand chilly nights nor the whipping of hard winds. There is also reason to believe that well hardened plants are less attractive to cutworms.

Intensive vs Extensive Gardening

The view has been expressed in this column and elsewhere that the old-fashioned market garden, with its small area, large proportion of hand work, difficult manure problem and generally intensive and costly practices, is gradually passing.

C. E. Haw, a veteran and exceedingly skillful gardener at Syracuse, takes exception to this view. He says intensive gardening is still sound and will be largely practiced for a long time. His own place is his argument. Mr. Haw's farm consists of 13 acres, which has received no manure for 15 years save that supplied by two horses and a cow—now one horse and a cow. He specializes in early crops, tomatoes and sweet corn in particular, but others as well. All the land is seeded to rye in the fall, and the acres that are earliest free are seeded to vetch. He uses 2½ tons of acid phosphate and 1,500 pounds of nitrate. He has applied no potash for four years. Now he begins to see the lack, and is buying 1,500 pounds of muriate this season. He is confident that his soil is as good as 15 years ago, and he has fewer weeds. He plows under sweet corn stalks instead of feeding them, and so saves labor. Mr. Haw is using gasoline power, and he thinks the horseless garden is not out of sight.

You Get Results with SOLVAY

There's no years of waiting when you use SOLVAY PULVERIZED LIMESTONE.

This finely ground, PULVERIZED Limestone makes good the very first season and three or four years thereafter. Fields must be sweet to give bumper crops and SOLVAY makes them sweet,—brings the big profits. Economical, safe, non-caustic, easy to handle, in 100 lb. bags or in bulk. Place your order early for prompt shipment.

Many interesting facts are in the SOLVAY Lime Book—free! Write today.

Pennsylvania State Farm Council Now Organized

AS the outgrowth of the recent Pennsylvania Agricultural Conference, there has come into existence a body known as the State Council of Pennsylvania Agricultural Associations, which is composed of agricultural groups and organizations rather than of individuals. Its official purpose is to represent organized agriculture in the State and to bring together the various groups for a round table discussion on topics of mutual interest. It also desires to co-ordinate farm associations for definite action and to initiate and support legislative measures beneficial to farming. Its first official step was to urge economy upon the legislature in the expenditure of State funds.

Officers elected are: President, M. J. Phillips; Vice-President, Mrs. F. B. Black, President of the State Federation of Farm Women's Clubs, and Secretary-Treasurer, John D. McKee, Deputy Secretary of Agriculture. These together with Dean R. L. Watts, of the Pennsylvania State College, and Master John A. McSparran of the State Grange, make up the Executive Committee.

The Pennsylvania Farms Bureau Federation plans to start active operation on May 1, opening official headquarters at Harrisburg, Pa. Paul Hoffman, County Agricultural Agent in Adams County, Pa., has been chosen as Secretary for the body. Mr Hoffman has made an excellent record in the Farm Bureau work in his county and his appointment to the State Farm Bureau has been received with much favor.

The Pennsylvania State College of Agriculture is developing plans for a larger summer session this year than ever before. Applications from public school teachers and others interested in the summer training school have been pouring in rapidly at the college and an exceptionally large registration is expected. Almost 2,700 men and women were enrolled at the college last season. A faculty of over 200 has been engaged for the work, a number of which are coming from other schools and colleges.

CENTRAL PENNSYLVANIA NOTES

J. N. GLOVER

Farmers are busy seeding oats and plowing sod for corn. Many farmers have plowed sod before seeding oats on account of the cold weather, which will retard germination of oats at once. Since frost was only a few inches deep last winter, the ground plows harder than usual. Then, too, the ground has dried out lately, for no rain has fallen for nearly two weeks.

Clover seed has been sown and manure has been hauled to sod fields, instead of allowing it to rot in yards until fall seeding. Feed seems plentiful on farms and some hay will be baled later for sale. Apple trees are being sprayed for the first time.

Several carloads of Michigan seed potatoes have been shipped into Union County as disease-free seed. The Pennsylvania Farmers' Cooperative Federation of Philadelphia sold a number of carloads of fertilizers in this section, saving much of the dealer's profits.

Famous Guernsey Cows

Faith of Rockledge is owned by B. N. Dickinson, Chazy, N. Y., has a record of 13,999 pounds of milk and 663.6 pounds butterfat, giving her seventh place in Class CC. She carried a calf 273 days of her test period. Her record was made ON AN ORDINARY FARM and had several different milkers handling her during her test period. She has a very amiable disposition and is always ready for her feed.

They believe in square deal and expect to sell many carloads of dairy feeds this fall at a saving to farmers.

The eight months' term of school is up and farmers will get some help from children old enough to help on farms.

This may be a good year to stick to the farm, though the outlook is none too encouraging as to help and wheat crop prospects.

URGES PENNSYLVANIA FARMERS TO SUPPORT TRESPASS BILL

A bill has been introduced in the House of Representatives in the Commonwealth of Pennsylvania by Representative Woner from Butler County, which is designed to protect private

land against trespassing. The bill was prepared by F. M. Dean, Secretary of the Farmers' Game Protective League of Eldorado.

The bill provides for the posting of private land, calling for the use of printed signs not less than a foot square which shall be located at intervals not exceeding 40 rods apart and shall be posted at least 30 days before the open season for game and fish. Trespassing will only be permissible upon securing a permission from the owner or caretaker of such lands.

Persons guilty of trespass will under the law be liable to a penalty of \$50 or a jail sentence—one day for each dollar of fine or cost. One-half the fine, according to the bill, goes to the school fund of the district in which the offense

is committed and the other half goes to the general fund of the Commonwealth.

Mr. Dean in the letter to American Agriculturist urges all Pennsylvania farmers and landowners to write their representatives and Senators to support this bill. He writes: "If you will urge the farmers to write their representatives in your next issue of American Agriculturist, I believe we will be as successful as we were in defeating and securing the repeal of the Daylight Saving law." Be sure to write your representatives.

We are new subscribers to your paper, and do thoroughly enjoy the weekly visits of the American Agriculturist. —F. L. FOSTER, Oswego County, N. Y.

"—but Woman's work is never done"

Here's one of the 398,000 wives for whom the discovery of Union Carbide has brought an end to

the day's work — and hours for rest and recreation, vitally necessary to health and happiness.

Old tasks made easy

Can you imagine a gas well right in your own yard? Then you have a vision of the Colt Lighting-and-Cooking Plant—known everywhere

as the Colt "Gas Well." From it comes Union Carbide Gas, made automatically as needed—a gas for convenience and comfort—

—for lighting your house and barn!

no more lamps to clean and fill

—for cooking your meals!

—for ironing your clothes!

—hot water for washing!

The Colt "Gas Well" makes these tasks lighter—brings the relief your wife has always longed for.

Remember—your wife's kitchen is her workshop

How many summers has she burned of her health and courage in that stifling kitchen—overheated to exhaustion by the hot cook stove—facing the week's wash or an all

day's ironing! And the meals to be got, bar nothing! At bedtime mentally and physically exhausted—head aching—nerves on edge—and tomorrow all over again.

Let us help you change all this

Union Carbide Gas from the Colt "Gas Well" makes a cooler kitchen. Heats the water, or the iron, and cooks without heating up the room.

Instantly turned on or off—work shortened—an extra hour or two for rest and enjoyment of this greatest of all home improvements.

We make it so easy—a whole year to pay

Make this your first cool kitchen summer! Delight in the soft sun-like brilliance of Union Carbide Gaslight in every room. You'll read more and learn more; so will all

the children. Colt "Gas Wells" are helping farmers everywhere to make their farms pay. Surely you're interested—get the facts. Send the coupon today—NOW.

Comfort Shoe

Of Double-Tanned Horsehide

"I bought a pair of Wolverine 1000 Mile Shoes at Nevada last year and have worn them over 14 months every day. I wish to buy another pair for myself and family. Please give me the name of a dealer in Wichita, Kansas."

(Signed)
W. F. GRANGER,
Winfield, Kans.

Comfort Shoe

A shoe so pliable and soft, you can double it up like a moccasin. It wears like iron, yet you'll hardly know you have it on. For dry weather or if you have tender feet. Ask for Stock No. 750.

Double-Tanned Horsehide

Wears Like Iron—Stays Soft

We are the only makers of Wolverine double-tanned horsehide work shoes, the best wearing outdoor, or indoor shoe on earth.

In our own tanneries we double tan horsehide — the toughest leather known — by our secret, exclusive process, to the softness and flexibility of buckskin.

Then we make up this double-tanned horsehide into work shoes. We make no other shoes. All our resources are combined to make the best, longest wearing work shoe in the world.

Horsehide is known for its toughness of fibre. It is the only leather used to cover league baseballs because it is the only leather tough enough to stand the pounding. Treated by our process its toughness and ability to resist wear are increased. Yet we tan this thick, tough hide so that it is soft as velvet.

Our double-tanned horsehide

has another quality you will appreciate. It dries soft. Wet it, soak it in water, mud, then dry it out and it will be as soft as before. No other leather like it.

Ordinary leather dries hard as a board. But Wolverine horsehide shoes never lose their flexibility, ease and comfort.

Whether you get a Wolverine Hi-Cut, Wolverine Dreadnought, Wolverine Plowboy, Wolverine Planter, or a Wolverine Comfort Shoe you'll find it the best wearing and most comfortable work shoe you ever had on your feet.

All are horsehide through and through. And all are built to stand wear and tear and give double satisfaction. You'll find the Wolverine the most economical shoe you can buy.

If your dealer can't supply you with Wolverine Shoes, write to us and they will be furnished through our nearest dealer. Ask for our catalog.

We specialize in
Work Shoes
—a Work Shoe for
every purpose

All made of
double-tanned
horsehide

They wear and wear
and wear!

New Cooperatives Started

For Seed and Cherry Growers—Albany Farm News

ANOTHER New York State Co-operative association has been formed. It is called the New York Seed Improvement Cooperative Association, Inc., and its aim is the use of better seed by New York farmers. The association is now set up and ready to inspect and certify crop seed raised by members.

Every year in New York, as in other States, millions of dollars are lost through lessened production resulting from inferior seeds—Southern grown seed that cannot survive the Northern climate, seeds with a high percentage of impurity, seeds of low yielding ability. It is not unusual to find a statement like this with a bag of seed: "We give no warranty as to the description, purity, quality, or productiveness of these seeds and cannot be responsible in any way for the crop." Where farmers are using 5,000,000 bushels of grain and other seeds and 3,500,000 bushels of potatoes, investing annually close to \$20,000,000 in seeds, some guarantee of a crop might well be considered essential.

The principle of pure breeding may be applied to seeds as well as to cows. There are strains of oats that yield more bushels of grain per acre and withstand storms better than other strains. The same is true with wheat and barley. There are varieties of cabbage, potatoes, and beans which are particularly resistant to disease and yield more tons or bushels to the acre than do others not carefully bred or selected.

Membership Requirements

Any bona-fide grower, contract grower or prospective grower, of any crop seeds in New York State may apply for membership in the seed association. Cancellations will be received during a withdrawal period. When a grower is received in the association he receives the services of the organization, which is the only State-wide body prepared to officially inspect and certify New York State crop seeds.

While membership is on the individual basis, provision has been made for group representation by crops through advisory committees elected by the growers of the various kinds of crop seeds. Besides these crop committees there will be an advisory council made up of representatives of the State College of Agriculture, the Geneva Experiment Station, and such other persons as the board of directors may appoint. There will also be a committee of reviews to check all inspections and hear and pass upon complaints.

A board of directors of five has been elected for one year. Bruce P. Jones of Hall is President, and Elmer E. Hults of Marathon, Vice-President. The other members of the board are Lyman L. Foote, Malone, H. B. Munger, Bergen, and A. M. Reed, Cortland.

CHERRY GROWERS ORGANIZE

New York's cherry crop is the latest recruit to cooperation. Recently at a meeting of directors of the New York Canning Crops Cooperative Association, Inc., it was voted to handle the cherry crop of members of the association and pitters have already been secured which will be installed at certain points in cherry producing territory. After the fruit is pitted it will be put into gallon tins or barrels and placed in cold storage and frozen. Sales will then be made as the market price is right. During the past few years the consumption of cherries has been enormously increased by the fashion of adding preserved cherries to many drinks and ices. The great bulk of the cherry crop is canned and sold in the large cities.

New York growers are following a precedent successfully established by cherry producers of Wisconsin and Michigan where for the past two years the farmers have owned their own plants and factories. In 1921 a growers' organization in Michigan, known as the Grand Traverse Packing Company, canned 1,200,000 pounds of cherries, paying the grower at his

farm 10 cents a pound. About that time the New York growers were getting 5 or 5½ cents a pound.

The sale of the cherry crop in New York has been highly speculative, because growers have had no storage facilities and no sales organization to develop new markets. New York cherries have been sold to the canneries on contract annually and at the lowest price. The Canning Crops Association hopes to largely remove the speculative element by cold packing fruit and seeking new markets.

Association members have been asked to report an estimate of their crop to the organization, for control of the New York crop is essential to the success of the enterprise. Meetings are being called in the cherry producing sections of the State where plans will be discussed by the producers.

FARM NEWS FROM ALBANY

The Downing-Hutchinson Education Bill, which embodies the suggestions of the Committee of Twenty-one, passed the Senate Tuesday, April 23. Only six Senators voted against this bill. The bill is still under consideration in the Assembly at this writing.

* * *

A very important bill affecting the cooperative law provides for the issuing of bonds or preferred stock where new or additional capital is required, paying a rate of interest not exceeding 8 per cent. This would allow the establishment of some cooperative enterprises without the investment of so much capital by the farmers themselves.

* * *

A bill providing for the joint administration of the Cornell Agricultural College and the Geneva Experiment Station has passed the Assembly and is now pending in the Senate Committee. The only opposition to this bill comes from the city of Geneva which fears that some of the activities of the station might be removed from Geneva to Ithaca. The consolidation has the approval of Dean A. R. Mann, of the College of Agriculture and Dr. Roscoe Thatcher, director of the Experiment Station, and the trustees of both institutions.

* * *

A third bill bearing on indemnities for slaughtered tubercular cattle has passed both houses and is before the Governor for his signature. This bill provides funds for payment of slaughtered cattle during the fiscal year 1923 to 1924. It is expected that the three bills, the first two of which have been previously reported, will pay for indemnities for slaughtered cattle until June, 1924.

* * *

The Assembly has passed one of Governor Smith's reconstruction bills proposing the constitutional amendment to consolidate 180 State departments and bureaus into 20 major departments and reducing the number of elective State officers from 7 to 4. As this bill is recommended by the Governor, it is now certain to become a law so that the proposed amendment will be submitted to the people of the State.

* * *

A bill has passed both the Assembly and the Senate, amending the Farms and Markets Law relative to changing grade and packing labels on barreled or boxed apples.

* * *

The present automobile license fee system would be replaced by a one-cent tax on gasoline, according to the bill introduced into the Assembly. The measure also provides for a flat license fee of three dollars for pleasure cars and ten dollars for electric machines. This gasoline tax is a law in some States now, and has been discussed for some time as a possible law in New York.

* * *

One of the new laws of 1923 will provide for a hunter again wearing a button showing that he has a license. This button will be worn in a conspicuous place. The law will become effective January 1, 1924.

Spring Fires Severe in New Jersey

W. H. BULLOCK

NEARLY every section of New Jersey suffered from spring forest fires in late April. Some of the more heavily wooded sections have a damage estimated into the many thousands. In Atlantic and Ocean Counties the forest fire damage was particularly severe, destroying not only scrub pine growth, but wiping out some farm houses and seriously threatening a number of the small towns. Through the general farming and dairy sections of Somerset and Morris Counties considerable loss was reported. On both sides of the Delaware River in Warren and Sussex Counties, N. J., and adjacent counties in Pennsylvania, the fires were very severe. Even in Burlington County, considerable damage was suffered.

Lack of State Protection

The more than usual attention which was focused on fires in New Jersey this spring has occasioned considerable comment upon the lack of forest fire protection in that State, as compared to the quite generally adequate protection to forest and farm lands in adjacent States. The New Jersey State Department of Conservation and Development has been badly handicapped for years by lack of sufficient state funds for fire prevention, but the funds have not been forthcoming and the State has come in for considerable criticism in this regard during the past few weeks.

Newark Market Building Completed

A splendid marketing building, which is one of the best in the country, has just been completed in Newark, N. J. It will offer farmers and dealers a type of retail distributing service which has been badly needed in northern New Jersey for years. On the ground floor of the new building are accommodations for regular merchants' stands for handling all sorts of food commodities, while the second floor is turned into a municipal parking place for automobiles and farmers' trucks. A large refrigerating plant is located in the basement. The market will be open for operation early in the summer.

Advocating Standardized Containers

The question of standardized containers for fruits and vegetables has been given serious consideration at various farmers' meetings in New Jersey during recent weeks and sentiment is gaining for a standard size which will come into general use in all of the markets. The New Jersey State Department of Agriculture is working closely with the United States Bureau of Markets on this matter. The proposed containers which are larger than 1 quart would include the following sizes: 2-quart, 4-quart, 8-quart, 16-quart, 24-quart and 32-quart or bushel. This matter is extremely important to New Jersey growers since they buy containers in very large quantities. One association alone, in the southern part of the State, has placed one order for over 100 cars.

Famous Guernsey Cows

Criterion's Clara Bella, fifth in Class B, the 4½ year old division, produced 15,709 pounds of milk, 856 pounds butterfat in a year. She is owned by W. D. Mahony of Averill Park, N. Y. He purchased her from Mr. Buckley of Valley Falls, N. Y. In commenting on her performance Mr. Mahony states, "That at no time during her test did she go off her feed or was she in any way indisposed. She finished her test in better condition than when she started."

For the Man Who Is Buying His First Tractor

DON'T underpower yourself when you start tractor farming. Our dealers can sell you a 10-20 h. p. McCormick-Deering Tractor, but more than likely it will be far more practical to invest in the husky 15-30 h. p. size. Underpowering is a common mistake made on the farms today. If you could take a general canvass among tractor owners you would be surprised at the number who admit, "I ought to be pulling another bottom," or, "I can't touch that size belt machine," or, "I didn't realize how many more jobs I could have handled with a little extra power."

Don't make that mistake. Remember that when it is a McCormick-Deering Tractor you take home you are making a power investment to hold good for fifteen or twenty years, if you give it just ordinary good care. Be ready for all sorts of drawbar and belt power demands that will come along from now on. The extra power will pay for itself over and over again.

McCormick-Deering 15-30—the 1923 standard of farm power, developed by the Harvester Company's engineers—is a 3-plow tractor with liberal power in proportion for all-year-round farm work.

McCormick-Deering 15-30 Features

Ball and Roller Bearings at 28 points.

All wearing parts, including cylinder walls, replaceable.

Entire main frame in one sturdy unit.

All wearing parts enclosed, running in oil.

All parts easily accessible, easily removed.

Alemite lubricating system. Throttle governor.

Large belt pulley.

Adjustable drawbar.

Three forward speeds.

Water air cleaner.

Comfort and safety features, such as platform, wide fenders, adjustable seat and foot levers.

All these details and other features are built into the up-to-date tractor pictured above, and it is backed by McCormick-Deering quality assurance. You will agree that here is a practical farm power unit worth your close study. Stop at the McCormick-Deering dealer's store and get acquainted with the McCormick-Deering 15-30 Tractor.

MINERALIZED WATER ROUTS CHICKEN LICE

Tablets Dropped Into Drinking Founts
Banish Vermin, Make Fowls Grow
Faster and Increase Egg Yield

Any poultry raiser can easily rid his flock of lice and mites, make chickens grow faster and increase their egg yield by simply adding minerals to the fowls' drinking water. This does away with all bother, such as dusting, greasing, dipping and spraying. The necessary minerals can now be obtained in convenient tablets, known as Paratabs. Soon after the fowls drink the mineralized water,

all lice and mites leave them. The tablets also act as a tonic conditioner. The health of the fowls quickly improves, they grow faster and the egg yield frequently is doubled. Little chicks that drink freely of the water never will be bothered by mites or lice.

The method is especially recommended for raisers of purebred stock, as there is no risk of soiling the plumage. The tablets are warranted to impart no flavor or odor to the eggs and meat. This remarkable conditioner, egg tonic and lice remedy costs only a trifle and is sold under an absolute guarantee. The tablets are scientifically prepared, perfectly safe, and dissolve readily in water.

Any reader of this paper may try them without risk. The laboratories producing Paratabs are so confident of good results that to introduce them to every poultry raiser they offer two big \$1 packages for only \$1. Send no money, just your name and address—a card will do—to the Paratab Laboratories, Dept. 889, 1100 Coca Cola Bldg., Kansas City, Mo., and the two \$1 packages, enough for 100 gallons of water, will be mailed. Pay the postman \$1 and postage on delivery, and if you are not delighted with results in 10 days—if your chickens are not healthier, laying more eggs and entirely free from lice and mites—your money will be promptly refunded. Don't hesitate to accept this trial offer as you are fully protected by this guarantee.

The Hen House Rat

How To Combat It and Other Enemies of Poultry

ONE of the easiest places to catch and destroy rats is in the hen-house by the use of simple home-made devices or by turning feed hoppers or troughs into traps. The very fact that the hens eat from these hoppers or stand on the box traps seems to give the rats confidence, or else destroys the man scent so that they walk into them blindly. Of course, the work connected with these traps must be done by the poultryman at night, but, as the farmer or chicken man is generally around in the early evening, it is not a great hardship to pull a string if it results in killing a few rats.

One of these traps is made for rats especially. It is a box eight feet long, ten inches or more high and a foot wide. The cover is hinged along one side. To set the trap, a small piece of wood is placed to raise the unhinged side, and to this wood or prop is attached a piece of string leading away through a window or door, where the trap may be sprung without disturbing the rats. Bait the trap with corn of some sort, and be sure you spread this in the box with a shovel or pail. Under no circumstances use your hands.

By L. H. HISCOCK

distance. Set traps occasionally. A good set is made at the foot of a tree. Nail a piece of meat to the tree ten inches from the ground. The weasel will stand upon its hind legs and jump for the bait and be likely to get caught.

Around the stone walls, the traps are placed under stones that arch. It is a good plan to place a handful of poultry feathers under the trap, as these attract the creatures. Drop a few drops of blood from some animal about the trap whenever you visit it and that is all the bait needed. Traps for weasels need not to be fastened securely. Simply attach a small drag to the chain. The creature is very courageous but being so small is not very strong.

GAS 'EM

B. H. PAUL

A new use for the flivver but a practical one has been recommended by the poultry department at Wisconsin College of Agriculture.

Make a rat exterminator of your car if the rodents are causing your chick losses. The sure-fire rat exterminator

All set for Mr. Rat. He meets his end in the bag at the left.

Be sure the upraised cover is heavy enough to drop instantly. You have the choice of putting chloroform in the box to kill the rats, or you may make it with a spout on one end and set it up off the floor like the trap pictured.

In this case an open dry-mash hopper was the trap. The hopper had a high board in back, a low board in front and slats from one to the other through which the hens put their heads to eat. A hinged top was fastened to it, and a small prop with a string attached was used to spring it. But to get the rats out, a hole was cut in one end of the hopper and a four-inch stovepipe nailed to it with a good down pitch. Over the lower end of this a good, stout bag was fastened. When the trap was sprung, by beating on the hopper, the rats were driven into the bag, where it was easy to club them to death.

The beauty of these devices is that no rat is ever killed in the hopper, a thing which generally puts other rats wise. The man scent, caused by handling traps, is entirely lacking. The very fact that the hens eat from the hopper is enough to make the rats keep coming. The hopper as a sole source of feed brings the rats which never detect danger as long as no rats are killed in it.

HOW TO TRAP ANOTHER HEN-HOUSE PEST, THE WEASEL

C. H. CHESLEY

Every time the trapper captures a weasel he has the satisfaction of knowing that he has rid the earth of one of its most bloodthirsty creatures, one that kills great numbers of chickens, birds, squirrels and rabbits.

The weasel hunts about old stone walls and fences and it is in such places that we should set our traps. Small size traps should be used and a number of them should be placed in likely localities. Take the carcass of a muskrat or rabbit, after the animal has been skinned, hitch a string to it and drag it along the ground for a considerable

put forth by the college is safe, there being no likelihood of causing a conflagration or endangering anything other than the game sought. The method is described as follows:

Back your car up to the infested area, leave the motor running and attach a piece of hose to the exhaust pipe, then place the other end of the hose in the rat hole. Catch the rats when they try to escape from other holes or openings. Young rats will be killed by the exhaust fumes before they are able to escape and the older ones will make a hasty exit.

MORE ABOUT GIVING THE HEN A REST

A. D. BORNT

I read with interest the article by Mr. Mapes in the March 10th issue and feel impelled to make a few comments. Right here let me beg friend Mapes to take these remarks in the kindly interested spirit in which they are meant.

It is my experience that breeding and feeding go hand in hand. Neither the one or the other may be slighted except at the cost of production. It would seem, however, that the problem of feeding has been better worked out than that of breeding. Take, for instance the world's record pen of Leghorns at the Western Washington Contest, which averaged over 284 eggs for each hen. It seems to me these birds started to lay and kept it up with a vengeance. Several birds in this contest, ten to be exact, went well over the 300 mark. Could they have done it if poorly fed? Would it have been possible without breeding?

Of course lighting brings its own problems, but I doubt the wisdom of starving or under feeding a hen simply because she has stopped laying. It might be well to vary the rations somewhat, feeding more largely on whole grains and reducing the protein content, but in every case the hens should be well and abundantly fed. They have a hard year's work before them and they must store in their bodies, to the great-

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words: "Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 437, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

WALKER REMEDY CO., Dept. 437

Waterloo, Iowa

Send me the [] 50c regular size (or [] \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

est possible extent, the energy and materials for that production.

The ordinary commercial hen lays from 10 to 12 dozen eggs a year and this is the hen with which most of us have to deal. She will not stand a forced winter egg production. To avoid a spring slump she must be held back in winter. A 50 per cent production is dangerous except to an expert poultryman. Forty per cent is more nearly safe and as Mr. Mapes mentions, the hens at Storrs' are kept well within this limit. They may appear to him to be struggling to maintain this average, but remember these hens must lay for a year and a steady continued production is better than sudden spurts.

There is one question I would ask Mr. Mapes, but he will be unable to answer it before next November. "What is your average flock production per bird for the year?" This is the criterion by which all methods of feeding, breeding and housing must be judged. It is final.

Mr. Mapes' birds are starting late, he may be able to get them on range without a slump, but if they respond and go to 75 or 80 per cent in April and May, then I predict a mid-summer slump and a serious one. I doubt if anyone could hold them. It is within reason to expect them to go into molt during the last of July and August and refuse to lay until the next December. The culls selected by the Cornell expert are most sure to. I have followed their methods for several years and have practically eliminated early molting from my flock.

The winters in this particular corner of Chenango county are very long and severe and I find it more profitable and easier to secure fall eggs than winter ones. August eggs averaged 40 cents per dozen, September, 56 cents, and October, 71 cents, while I received for December eggs, 40 to 50 cents, January, 35 to 50 cents, and for February, only, 30 cents.

Thus it may be seen that my problem is to secure fall and early winter eggs and to do this I limit my production in spring. I use the Storrs' ration. In July, I add sour milk. In August a small per cent, about five, of linseed meal and from then on use every effort and device to hold and force egg production. Early pullets are the rule to begin laying in September and should some of them show a neck and tail molt in November they have already paid for themselves and begin laying again before January and continue through the winter.

WHO CAN ANSWER THIS?

I would like to hear from someone that has had experience with a home-made brooder. Also their best method of keeping away lice and mites during summer months. I know these are questions that are being discussed frequently. But very often the best method is not always given to the public.

I find that by inoculating the young turkeys when about eight days old is the best remedy to keep down blackheads, and make them grow. We also find the turkey hen an ideal mother for the young guineas. Last year there was so much dry weather that I believe many of the young guineas perished for the want of water in this section. But as an all-round mother, the turkey hen has proven herself worthy of a flock of guineas. She travels slowly and gives the little keets a chance to catch the bugs and millers flying around. Every one that has an orchard should have a flock of guineas to destroy the insects.—Mrs. G. LEHMAN, Pa.

A silo that locks together

THE Harder patented Spline Dowel, combined with a square tongue and groove on the staves, produce in the Harder a silo that will never lean or shear or lose its efficiency.

To be satisfactory, a silo must exclude air absolutely. That is the Harder principle.

When a Harder is built, it is there to stay. You will never find the name "Harder" on a leaning silo.

SILO BOOK FREE

OUR book, "Saving with Silos," was written for you. It is free. Send for it.

WHEN YOU TURN 'EM OUT ON PASTURE—

DON'T stop feeding your grain ration. Fresh spring pasture is fine for milk production, but for best results it should be helped out with grain, morning and night. By feeding Buffalo Corn Gluten Feed, in the mixture given below, your cows will produce enough extra milk to give you a good profit over the cost of feeding.

400 lbs. Hominy 100 lbs. Wheat Bran
300 lbs. Buffalo Corn Gluten Feed

This ration is a milk maker, easy to mix, safe to feed, palatable and inexpensive. It has not a very high protein content (13%) and this makes it an ideal ration for feeding on pasture.

You will find that its low cost and high productivity will make your farm show bigger milk profits than it ever did before at this season.

Mix the ration yourself or have your dealer mix it for you.

Guernseys—Why I Keep Them

(Continued from page 391)

and cream. This, coupled with a butter-fat test somewhere between 4.5 and 5.0 per cent, makes Guernsey milk the finest possible for table use. In addition, as I have said, the Guernsey cow is gentle and tractable, characteristics which one who has handled the nervous and high-strung Jersey, for example, will readily appreciate.

Originated as she was, the Guernsey cow will make a surprising amount of milk out of roughage—roughage on which, in our experience, a Holstein would dry up. This makes her a practical and valuable animal on farms where there is plenty of good hay and but little grain fed. In our work with our Guernseys this winter we have apparently discovered that, by limiting the silage feed to a rather small allowance, and increasing the clover and alfalfa hay accordingly, our cows have done much better than when fed heavily on silage. This change was not so noticeable when we tried it out in the case of the Holsteins.

Breed Limitations

To speak of the limitations of a dairy breed is dangerous, I know. Yet I believe that the man who starts breeding Guernseys without a clear understanding that there are certain handicaps which go along with the very fine qualities I have mentioned is doomed to disappointment.

To begin with, there are comparatively few Guernseys. This means that practically every pure-bred calf, bull, or heifer is raised and used for breeding purposes. What is happening now with Holsteins—countless numbers of pure-bred bulls being slaughtered and ordinarily good heifers not registered—is not duplicated with Guernseys, nor is it apt to occur.

Again, and this would seem to be borne out by figures, a Guernsey calf is harder to raise than a Holstein or an Ayrshire calf; and with us at least the cows are not so prolific, although they appear to breed longer, and thereby possibly make up in total number of calves.

Just as the sloper keeps bobbing up in the Holstein ranks, so the Guernsey with shy forequarters is constantly appearing. Happily, however, there are certain families of Guernseys which are strongly prepotent in good udders. Size, also, is likely to be lacking in the Guernsey cow, and a meaty udder which gives promise of a great deal more milk than you ever get from it cannot be entirely avoided.

None of these faults is entirely serious, but they are encountered frequently in the breed, and the man who shuts his eyes to them is liable to wake up some day to the fact that he has not been breeding the kind of cattle that he would like to own.

The Future of the Guernsey

Here my farm-management training is bound to triumph over my love for a good cow or my enthusiasm for the breed. Pretty generally, things that pay in farming endure, and those which do not are discontinued. In my judgment, the future of the Guernsey cow as an economic factor in America is going to depend entirely on her ability to pay in the hands of the average dairyman.

If she is to do this, the distinctive quality of her milk must be commercialized, because the Guernsey does not give enough more milk than the Jersey, nor nearly enough approach the production of the Holstein to win her an

undisputed place on production alone, unless the peculiar quality of her milk and milk products is recognized.

This means that those of us who are interested in the Guernsey cow must keep her milk separate from other milk and must sell it as Guernsey milk. I can speak from experience in this, because I believe I was one of the pioneers in doing it, and I know it has paid. Others are beginning to do the same thing. A number of large cities now have Guernsey milk routes; a big company in one of our own New York State cities is about to offer a special Guernsey milk service to its patrons. Reproduced in connection with this article is a page of their announcement to customers.

As I see it, the future of the Guernsey breed is the brightest of any dairy breed in America to-day, because the Guernsey cow is the one cow that gives a distinctive milk—milk which once used sets the standard for all other milk thereafter. At last the men behind her have appreciated this fact, and on the commercialization of it will rest, I confidently predict, a Guernsey milk distribution in every town and city in the United States. This means hundreds and thousands more Guernseys paying in the hands of practical dairymen.

Has any breed brighter prospects?

PERSISTENT MILKERS BEST

B. A. MACKINON

I have talked with many farmers about their cows. "How much milk does that cow give?" I ask. "Oh! A mighty good mess—about a pailful." "Does she keep it up through the year?" is my next question. "Well, sometimes," and then he wants to change the subject.

Every farmer knows how much he gets for his milk, and how much his feed bought at the feed store costs, but the average farmer knows nothing about his cost of production. It seems almost impossible to show him that daily milking records which take only a moment to post at each milking might increase his profits tremendously. Many farmers with 40 milking cows would make more money with 20. Of those 40 cows, 20 are eating feed which costs more than their milk pays for. Eliminate that 20, cut the feed bills in half and the labor in half and immediately the bank balance begins to grow. From the money realized from the sale of the 20 "lemons" go out and buy, say, 4 really good cows that will give as much milk as the whole 20 and eat only one-fourth as much.

But right here is where many farmers continue their error. When he sells off his "boarders" and goes out to buy four or five new cows he demands cows that are "fresh". Buying fresh cows is all right if they have an official cow testing association annual record behind them. But we all have known many wonderful appearing cows which milked like the very mischief for the first 60 or 90 days and were not worth their keep after that time. The really smart buyer looks for cows that have been milking for eight or nine months and are about to be dried up. If they are still turning out enough milk to pay for their keep the presumption is that they will be good producers throughout the year.

We have kept milking records at Westview Farm, Pawling, N. Y., ever since we owned the farm, and these

Rebuild The Old Stave Silo

ANY iron hooped, stave silo, if twisted, tipped or collapsed can be rebuilt into a beautiful new Craine 3-wall Silo at about half the cost of a new.

A Craine Silo gives 3-wall protection against wind and weather. The strong stave wall surrounded by Crainelox Spiral Covering with thick wall of Silafelt between, insures perfect silage and giant strength at every square inch of silo.

Craine Silos are different from any silo you see. Their smooth exterior is unmarred by hoops or lugs. They are as strong as they are beautiful. When you choose the Craine you decide on permanent satisfaction—the lowest yearly cost for silage making and keeping.

Fecundity!

Fecundity, the ability to produce strong, healthy calves regularly, is essential to a profitable dairy cow.

FECUNDITY IN HOLSTEINS MEANS:

Full value from prepotent sires --

Assurance of regular herd increases year after year -- Extra profit from sale of surplus stock --

Regular freshenings and consequent increased milk production for the whole herd -- Larger annual net profits.

Let Us Tell You About Holsteins.

EXTENSION SERVICE,
The Holstein-Friesian Association of America
230 East Ohio Street, Chicago, Ill.

HOLSTEINS

CATTLE BREEDERS

Glista Heifer Calves

SIRE: Korndyke Pontiac Glista, No. 268342, a grandson of the great Cornell cow, Glista Ernestine with seven records of over 30 lbs. butter in 7 days. Best record 677.3 lbs. milk, 34.22 lbs. butter 7 days.

These calves are from high producing dams, most of which have good A. R. O. records. Price ranging from \$50 to \$75 according to record and breeding of dam. Herd is T. B. tested.

BRADLEY FULLER, Utica, N. Y.

HIGH-GRADE HOLSTEIN COWS

fresh and close by large and heavy producers. Pure bred registered Holsteins all ages; your inquiry will receive our best attention.
Browncroft Farm McGRAW New York

When writing advertisers be sure to say
You saw it in the American Agriculturist

records have been of tremendous value. We keep pure-bred Guernseys, and we are well pleased with our first year of testing. Of 12 cows on test, every one has made over 10,000 pounds and over 500 pounds of butterfat. Our daily milk records have shown us that the cow which gives a big flood of milk when fresh, is not necessarily profitable, while another cow which gives less but is persistent throughout the year is a real money-maker. Only carefully recorded daily milkings will tell you the truth. You wouldn't keep a hired man around who ate you out of house and home and did only one hour's work a day; why keep a cow that runs up your feed bills and produces less milk than her feed costs? Make yourself a gift of a milk scale and a milk-sheet.

NEW YORK GUERNSEY BREEDERS HOLD FIRST ANNUAL MEETING

The First Annual Meeting of the New York State Guernsey Breeders, Inc. was held at the Ten Eyck Hotel, at Albany, N. Y., April 20. Approximately 100 Guernsey breeders from all over the State attended the meeting.

W. E. Davis, secretary of the state association gave a report on nine months work of the association. His report showed a rapid growth in the association which bids well for the future of the business in New York State. The two sales held during the last year resulted in financial returns to the association.

Plans were formulated relative to the coming National Dairy Show, which followed shortly after the State Fair. The entertainment of visiting Guernsey breeders at the show was discussed; as a result action will be taken to entertain visiting Guernsey men from other States.

The association has been asked to name a member to represent their interests on the cooperative council. A committee was appointed to confer with a committee from the American Guernsey Cattle Club relative to the adoption of a cap or seal for milk bottles containing Guernsey milk.

A new feature of the association is the Junior Association for boys and girls who are members of calf clubs. Their association will be known as the Junior New York State Guernsey Breeders' Association. The State association plans to furnish ribbons for junior project exhibitors who are members of calf clubs winning at county fairs.

Carl Musser, associate secretary of the American Guernsey Cattle Club, gave some interesting facts relative to A. R. work and a review of the official records.

Dr. W. W. Williams, veterinary surgeon of Springfield, Mass., and the son of Dr. Williams of the New York State Veterinary College at Cornell, gave an interesting talk on diseases, illustrating his discussion with slides.

The last feature of the program consisted of the distribution of the cups for 1922. Those who were awarded cups are as follows:

Class A—L. A. Toan, Perry, N. Y., cup donated by Woodland Farms, White Plains, N. Y.;

Class B—H. H. Hamond, Mt. Kisco, N. Y., cup donated by W. H. Gratwick, Linwood;

Class C—E. F. Price, Port Chester, N. Y., cup donated by Saugerties Farm, Saugerties, N. Y.;

Class D—H. W. How, Bedford Hills, N. Y., cup donated by C. L. A. Whitney, Albany, N. Y.;

Class E—H. W. How, Bedford Hills, N. Y., cup donated by H. M. White, Cossackie, N. Y.;

Class F—C. L. A. Whitney, Albany, N. Y., Cup donated by Chilmark Farms, Ossining, N. Y.;

Class G—Marion Lewis, Cameron Mills, N. Y., cup donated by Beaver Ridge Farm, Bedford Hills, N. Y.;

Class for Bulls—Taber & Mignin, Castile, N. Y. cup donated by Harbor Hill Farm, Roslyn, N. Y.

Right here I want to say that we have not been without your paper, the American Agriculturist, in over 12 years, and would not think of getting along without it on any account. We believe it is one of the best farm papers ever published. — Mrs. D. Hilliard, Croton, N. Y.

Cow Testers Know that De Laval Separators Skim the Cleanest

Statements from over half the cow testers employed by cow testing associations throughout the United States, reaching over 6000 farms, give additional proof of the superior skimming efficiency of De Laval Separators.

Cow testers know best of all what cream separators are used most, which skim cleanest and last longest, because they regularly test the skim-milk from the separators owned by their members. They say:

"I find on an average De Laval Separators skim cleaner—from a trace to .04 of one per cent. Thirteen out of nineteen separators here are De Laval." (.01 of one per cent equals one lb. out of every 10,000.)

"Out of 48 separator users 29 use De Laval. I've found them the best skimmers for the longest time."

"26 members have separators, and 22 are De Laval. They give the best satisfaction after considering all points."

"De Laval Separators have no equal for quality and efficiency. 15 out of 20 are De Laval."

"90% of the separators used by my members are De Laval. The majority skim closer than .02 of one per cent."

"The De Laval is a very close skimmer under any and all conditions. 95% of the separators here are De Laval."

"I have 25 members and 18 use De Laval. I have not had one test below .05 of one per cent."

*Authorities for these statements from cow testers, together with many others equally good, are contained in a booklet entitled "Cow Testers—What They Do and What They Say About De Laval Cream Separators and Milkers." Send for it—contains information about the value of cow testing associations.

Bull Calves at Farmer's Prices

We have two Guernsey bull calves with dark noses; one out of an A. R. cow that produced 12,480 lbs. of milk, another out of an A. R. cow that produced 11,170 lbs. of milk last year.

We have two more with dark noses out of two-year old heifers now on A. R. test that produced over 1,000 lbs. each in the month of March and will do as well in April.

These calves are well-grown, straight and right in every particular and they are priced to sell quickly.

THIS IS YOUR MARKET PLACE

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

LOOK AT THE EXPIRATION DATE ON YOUR ADDRESS LABEL

If your subscription has expired, you can show your appreciation of our courtesy in continuing to send you the American Agriculturist, by favoring us with your renewal at once.

There is no question as to your needing every coming issue of American Agriculturist, because some of the future numbers will contain facts that you would not willingly miss for any amount. The worst kind of economy in the world is to save \$1 by not subscribing for American Agriculturist and thereby losing \$10 or \$100 or even \$1,000 by not having the information that will be given in the next 52 issues of American Agriculturist.

If you were a doctor, you would find the best medical journal indispensable. If you are a real farmer who is out for 100% success and not merely a bare living, you owe it to yourself and family to read every coming issue of the American Agriculturist so that you can keep abreast of the times.

SPECIAL BARGAINS!

Fifty-two issues of American Agriculturist for only \$1 is a bargain, but we offer you even still greater value for your money if you accept one of the following special long-term bargains—

- 2 years for American Agriculturist only \$1.50
- 3 years for American Agriculturist only 2.00
- 5 years for American Agriculturist only 3.00

It has probably been merely an oversight if you are in arrears in your subscription. Before you forget it, mail your renewal for one of the above bargains and show your heart is still with us in our fight for your success and happiness.

MAIL THIS COUPON TODAY

AMERICAN AGRICULTURIST, 461 Fourth Ave., New York City.

I appreciate your sending me American Agriculturist after my subscription expired. Here is my check (or money-order) for renewal for.....years more.

Hang On To Your Dollar!

Recent Cases Handled by the Service Bureau

THE Chamber of Commerce of Montreal, Canada, has notified the Service Bureau that several of the silverware companies which had attracted attention through their spurious "premium" awards, have been prohibited from transacting their business through the mail. Just as this notice was received, a new firm cropped up, reported by one of our subscribers. It is undoubtedly a fake and our readers are warned against it.

Mrs. A. P. of New York received a postcard last October from The Community Sterling Company of Montreal, Canada, (note the use of a name resembling that of a reputable company in the silverware business). Mrs. P. was informed that she had won first prize in a puzzle contest and that if she would send a dollar she would receive a prize of seven pieces of tableware by return mail. She sent the money. Of course no "prize" ever arrived. Mrs. P. is out her money. The so-called company doubtless consisted of a clever rascal who took a post-office box, collected his gains until complaints began to come in from victims who had not received the promised articles, and then vanquished before postal and government authorities were informed of the trouble and got after him.

Moral: Hang on to your dollar. If you get such an invitation to part from it, invest one cent in a postcard and request the "company" to ship the prize C.O.D. You will have 99 cents left for something more worth buying than this sort of experience.

MONEY IN FULL FOR EGGS

Now that eggs are pouring into the city markets for the heavy spring trade, there are bound to be losses avoidable perhaps, but sometimes inevitable. However, it does not console the shipper who invested money and time in his poultry to know that his crate was the only one of a carload to be smashed. What he wants then is his money back, and that as soon as may be.

The Service Bureau therefore, is constantly pressing the claims of subscribers to whom express companies owe money for lost or broken shipments. With the unusually heavy traffic on the roads now, it is not always easy to rush an adjustment case through, but we have managed recently to speed up several which threatened to drag along some time.

One represented the loss of two cases of eggs, sent from a Pennsylvania farm to a New York City merchant. They disappeared en route. A claim for each case was filed. First, came a check for \$17.38 to pay for one; then, a few days later, the same amount for the other. The subscriber received \$34.76 in all, with the loss of only a short space of time. Needless to say Mr. J., the proprietor of the farm, was delighted to get his money in full.

"DOING A WONDERFUL WORK"

"I thank you for your kindness and appreciate the wonderful work you are doing for your subscribers." Mr. Petrishin of Pennsylvania wrote this after he received a check collected by the Service Bureau. He said he had been trying to get the money from a mid-Western mail-order house for almost a year, and finally, in despair, turned it over to the Service Bureau to collect if they could.

Only five days after our letter went to the office of the company the check came back to Mr. Petrishin. The company wrote that the amount had been credited to the account of someone else and that they were very glad to make the adjustment at our request.

"\$250 RECEIVED"

"I received the check of \$250," wrote Mr. L. A. F. of New York, "and would be only too glad to pay you for your trouble. You can count on me as a steady subscriber in the future for the good old American Agriculturist."

Mr. F. had agreed to sell a new type of motor car in his locality. He paid \$250 as a deposit, on the understanding that it was to be returned within a year if he resigned. Only a few months later, Mr. F.'s other business interests made it necessary for him to resign and he asked for a return of his deposit.

The firm at first ignored his letter, then made the excuse that the president was away. At this point, he placed the matter in the hands of the Service Bureau, which took up the matter directly with the New York headquarters of the firm.

Result, a check for the full amount, received and acknowledged within a week. Mr. F. expressed his deep appreciation in the letter from which we have quoted.

KNITTING COMPANY SETTLES

The check was for \$4.01 and it represented an effort of as many months to collect it. Mrs. M. F. of New York had sent baby sacques to a knitted wear company, but repeated letters brought no returns.

Then the Service Bureau took the matter up and found that a complete reorganization was going on in the company, against which several other claims were pending. It seemed for a while as though all trace of the different cases had been lost, but a little patience and persistence finally won out. Mrs. F. received her check and the other cases are well on the way to being settled.

THE RAILROAD MADE GOOD

A check for \$12 in full settlement for a shipment of pears was received by Mr. Albert Ink of Pennsylvania, after the Service Bureau took the matter in hand. The shipment was damaged by the railroad, but upon our bringing the matter to the attention of the proper authorities, they were very glad to make this settlement, which Mr. Ink considered a perfectly fair one.

The Valley of the Giants—By Peter B. Kyne

"WELL Rondeau," Bryce hailed the woods-boss cheerfully, "I see you have quite recovered. No hard feelings, I trust."

"By gar, she don' pay for have hard feelings wiz you, M'sieur," Rondeau answered bluntly. "We have one fine fight, but"—he shrugged—"I don' want some more."

"Yes, by gar, an' she don' pay for cut other people's trees, M'sieur," Bryce mimicked him. "I shouldn't wonder if I took the value of that tree out of your hide."

"I t'enk so, M'sieur." He approached Bryce and lowered his voice. "For one month I am no good all ze tam. We don' fight some more, M'sieur. And I feel ashame' for dose Black Minorca. Always eet is ze knife or ze club—and now ze rifle. *Cochon!* W'en I fight, I fight wiz what *le bon Dieu* give me."

"You appear to have a certain code, after all," Bryce laughed. "You're sporty in your way, you tremendous scoundrel!"

"Mebbeso," Rondeau suggested hopefully, "M'sieur likes me for woods-boss?"

"Why what's the matter with Pennington?"

The color mounted slowly to the woods bully's swarthy cheek. "Mademoiselle Summnair, he's tell me pretty soon be boss an' stop all thees fight. An' then good-bye Jules Rondeau. Thees country—I like him. I feel sad, M'sieur, to leave dose beeg trees." He paused, looking rather wistfully at Bryce. "I am fine woods-boss for somebody," he suggested hopefully.

"You think Miss Summer dislikes you then, Rondeau?"

"I don' theenk. I know." He sighed. "I am out of zee good luck now," he murmured bitterly. "Everybody, she hate Jules Rondeau. Colonel—she hate because I don' keel M'sieur Cardigan; Mademoiselle, he hate because I try to keel M'sieur Cardigan; M'sieur Sexton, she hate because I tell her thees mornin' she is one fool for fight M'sieur Cardigan."

Again he sighed. "Dose beeg trees! In zee woods, M'sieur, I feel—here!" And he laid his great calloused, hairy hand over his heart.

"That infernal gorilla of a man is a poet," Buck Ogilvy declared. "I'd think twice before I let him get out of the country, Bryce."

"Whose salt he eats, his song he sings," quoth Bryce. "I forgive you, Rondeau, and when I need a woods-boss like you, I'll send for you."

CHAPTER XXXI

AT eleven o'clock Saturday night the deputy United States marshal arrived in Sequoia. Upon the advice of Buck Ogilvy, however, he made no attempt to service that night. At eight o'clock Sunday morning, however, Bryce Cardigan drove him down to the crossing. Buck Ogilvy was already there with his men, superintending the erection of a huge derrick close to the heap of obstructions on the crossing. Sexton was watching him uneasily, and flushed as Ogilvy pointed him out to the marshal.

"There's your meat, Marshal," he announced. The marshal approached and extended toward Sexton a copy of the restraining order. The latter struck it aside whereupon the deputy marshal tapped him on the shoulder with it. "Tag! You're out of the game, my friend," he said pleasantly.

As the document fluttered to Sexton's feet, the latter turned to Jules Rondeau. "I can no longer take charge here, Rondeau," he explained. "I am forbidden to interfere."

"Jules Rondeau can do ze job," the woods-boss replied easily. "Ze law, she have not restrain' me."

The deputy marshal handed Rondeau a paper, at the same time showing his badge. "You're out, too, my friend," he laughed. "Don't be foolish and try to buck the law. I have one of these little restraining orders for every able-bodied man in the Laguna Grande Lumber Company's employ."

A gleam of pleasure, not unmixed with triumph, lighted the dark eyes of the French-Canadian. "I tol' M'sieur Sexton she cannot fight M'sieur Cardigan and win," he said simply.

"Shut up," Sexton roared. Rondeau shrugged contemptuously, turned, and with a sweep of his great arm indicated to his men that they were to go; then, without a backward glance, the woods-boss strode away in the direction of the Laguna Grande mill. Arrived at the mill-office, he entered, took down the telephone, and called up Shirley Sumner.

"Mademoiselle," he said, "Jules Rondeau speaks to you. I have for you ze good news. Bryce Cardigan, she puts in the crossing to-day. One man of the law she comes from San Francisco with papers, and M'sieur Sexton say to me: 'Rondeau, we are whip.' Deesmess your men. So I have deesmess

doze men, and now I deesmess myself. Mebbeso bimeby I go to work for M'sieur Cardigan. For Mademoiselle I have no weesh to make trouble to fire me. I queet. I will not fight dose dirty fight some more. *Au revoir, mademoiselle.* I go."

And without further ado he hung up. "What's this," Sexton demanded. "You're going to quit? Nonsense, Rondeau!"

"I will have my time, M'sieur," said Jules Rondeau. "I go to work for a man. Mebbeso I am not woods-boss for heem, but—I work."

"Then you'll wait till pay-day for it, Rondeau. You know our rules."

Jules advanced until he towered over the manager. "I tol' M'sieur I would

And he did. He proceeded to direct operations like the born leader of men that he was. With his late employer's gear he fastened to the old castings and the boiler, lifted them with the derrick on the wrecking-car, and swung them up and around onto the flat-cars. By the middle of the afternoon the crossing was clear. Then the Cardigan crew fell upon it while Jules Rondeau ran the train back to the Laguna Grande yards, dismissed his crew, returned to the mill-office, and released the manager.

"You'll pay through the nose for this, you scoundrel," Sexton whimpered.

Rondeau replied imperturbably, "who is witness Jules Rondeau tie you up? Somebody see you, no? I guess you don' feex me. *Sacré!* I guess you don' try."

CHAPTER XXXII

COLONEL PENNINGTON'S discovery at San Francisco that Bryce Cardigan had stolen his thunder was the hardest blow Seth Pennington had received throughout thirty-odd years.

On Tuesday he returned to Sequoia. Sexton related to him in detail the events which had transpired since his departure, but elicited nothing more than a noncommittal grunt.

"There is one more matter, sir," Sexton continued apologetically. "Miss Sumner yesterday instructed me to notify the directors of the Laguna Grande Company of a special meeting

ently his glance sought the carpet. Shirley continued:

"You had erected a huge sawmill and built and equipped a logging-road before you discovered you had been swindled. So you decided to unload your white elephant on somebody else. I was the readiest victim."

"I had my back to the wall," he quavered. "I was desperate. You had the money—more money than you knew what to do with—and with the proceeds of the sale of those cedar lands, I knew I could make an investment in California redwood and make big money for both of us."

"You might have borrowed the money from me. You know I have never hesitated to join in your enterprises."

"This was too big a deal for you, Shirley, I had a vision. I could see incalculable riches in this redwood empire. I dreamed of the control of California redwood; and if you will stand by me, Shirley, I shall yet make my dream come true—and half of it shall be yours. It has always been my intention to buy back from you secretly and at a nice profit to you that Caribou red cedar, and with the acquisition of the Cardigan properties I would have been in position to do so. Why, that Cardigan tract in the San Hedrin which we will buy in within a year for half a million is worth five millions at least."

She silenced him with a disdainful gesture. "You shall not smash the Cardigans," she declared firmly.

"I shall—" he began, but he paused abruptly.

"You are devoid of mercy, of a sense of sportsmanship. Now, then, Uncle Seth, listen to me: You have twenty-four hours in which to make up your mind whether to accept my ultimatum or refuse it. If you refuse, I shall prosecute you for fraud and a betrayal of trust as my father's executor on that red-cedar timber deal."

HE brightened a trifle. "I'm afraid that would be a long, hard row to hoe, my dear, and of course, I shall have to defend myself."

"In addition," the girl went on quietly, "the county grand jury shall be furnished with a stenographic report of your conversation with Mayor Poundstone. That will not be a long, hard row to hoe, Uncle Seth, for in addition to the stenographer, I have another very reliable witness, Judge Moore. Your casual disposal of my sedan will be hard to explain in view of the fact that Bryce Cardigan managed to frighten Mr. Poundstone into returning the sedan while you were away. And if that is not sufficient for my purposes, I have the sworn confession of the Black Minorca that you gave him five hundred dollars to kill Bryce Cardigan. Your woods-boss, Rondeau, will also swear that you approached him with a proposition to do away with Bryce Cardigan. I think, therefore, that you will not disagree with me when I suggest that it would be better for you to leave this country."

His face had gone gray and haggard. "I can't," he murmured, "I can't leave this great business now. Without my hand at the helm, things will go to smash."

"I'll risk that."

The Colonel raised his glance. She met it with firmness, and the thought came to him: "She is a Pennington!" Hope died out in his heart. He began pleading in maudlin fashion, but the girl was obdurate.

"I am showing you more mercy than you deserve—you to whom mercy was ever a sign of weakness. There is a gulf between us, Uncle Seth—a gulf which, because of my recent discoveries, has widened until it can no longer be bridged."

He wrung his hands in desperation; with hypocritical endearments he strove to take her hand, but she drew away from him. "Don't touch me," she cried sharply and with a break in her voice. "You planned to kill Bryce Cardigan! And for that I shall never forgive you."

She fled from the office, leaving him cringing on the floor. "There will be no directors' meeting, Mr. Sexton," she informed the manager as she passed

(Continued on page 407)

ANNOUNCING OUR NEXT SERIAL: THE BROWN MOUSE

WHEN Herbert Quick, from the depths of his experience with rural problems and his admiration for the people who are solving them, wrote "The Brown Mouse" he laid the scene of his story in a typical American rural community and drew upon life for his characters.

The result is a story which every farm paper in the country has wanted to obtain for its readers. American Agriculturist is therefore extremely happy to announce that the first serial release of this now famous story will be given through these pages.

The story will be illustrated by photographs from the moving picture made under the supervision of the American Farm Bureau Federation. And what is a Brown Mouse? Read the story and see!

have my time," he repeated once more. "Is M'sieur deaf in zee ears?" He raised his right hand, much as a bear raises its paw.

Without further protest Sexton opened the safe, counted out the wages due, and took Rondeau's receipt.

"Thank you," M'sieur," the woods-boss growled as he swept the coin into his pocket. "Now I work for M'sieur Cardigan; so, M'sieur, will have zee switch-engine weeth flat-cars and wrecking-car. Doze trash on crossing—M'sieur Cardigan does not like, and by gar, I take heem away. I am Jules Rondeau, and I work for M'sieur Cardigan. La la, M'sieur!" The great hand closed over Sexton's collar. "Not zee pistol—no, not for Jules Rondeau."

AS easily as a woman dresses a baby, he gagged Sexton, laid him gently on the floor and departed, locking the door behind him and taking the key.

In the round-house he found the switch-engine crew waiting for steam in the boiler. The withdrawal of both locomotives had caused a glut of logs at the Laguna Grande landings, and Sexton was catching up by sending the switch-engine crew out for one train-load, even though it was Sunday. The crew had been used to receiving orders from Rondeau; hence at his command they ran the switch-engine out of the roundhouse, coupled up the two flat-cars and the wrecking-car, and backed down to the crossing. Upon arrival, Jules Rondeau leaned out of the cab window and hailed Bryce. "M'sieur," he said, "do not bozzer to make zee derrick. I have here all you need; pretty soon we lift him off zee crossing, eh, M'sieur Cardigan?"

Bryce stepped over to the switch-engine and looked up at his late enemy. "By whose orders is this train here?" he queried.

"Mine," Rondeau answered. "M'sieur Sexton I have tie like one leetle pig and lock her in her office. I work now for M'sieur."

of the board, to be held here at two this afternoon. In view of the impossibility of communicating with you, I conformed to her wishes."

"What the devil do you mean, Sexton, by conforming to her wishes? Miss Sumner is not a director of this company." Pennington's voice was harsh and trembled with apprehension.

He rose and commenced pacing up and down his office. "You fool!" he snarled. "Get out of here and leave me alone."

Sexton departed promptly. It lacked five minutes of two. He passed Shirley Sumner in the general office.

"Shirley," Pennington began in a hoarse voice as she entered his office, "what is the meaning of this?"

"Be seated, Uncle Seth," the girl answered quietly. "If you will only be quiet and reasonable, perhaps we can dispense with this directors' meeting which appears to frighten you so."

He sat down promptly, a look of relief on his face.

"I scarcely know how to begin, Uncle Seth," Shirley commenced sadly. "It hurts me terribly to be forced to hurt you, but there doesn't appear to be any other way out of it. I cannot trust you to manage my financial affairs in the future—this for a number of reasons, the principal one being—"

"Young Cardigan," he interrupted in a low voice.

"I suppose so," she answered, "although I did think until very recently that it was those sixteen townships of red cedar in British Columbia in which you induced me to invest four hundred thousand dollars. You will remember that you purchased that timber for me from the Caribou Timber Company, Limited. You said it was an unparalleled investment. Quite recently I learned—no matter how—that you were the principal owner of the Caribou Timber Company, Limited! Smart as you are, somebody swindled you with that red cedar."

She gazed upon him steadily; pres-

How To Make A "Reflex" Radio Set

A Set That Is Well Suited To The Fan Who Likes To Experiment

By BRAINARD FOOTE

WHEN an impulse from a radio broadcasting station lands at the receiving aerial, it sets up currents vibrating in it at a frequency far above that to which the human ear will respond. For instance, a wave length of 300 meters means a frequency of one million per second, and since the upper limit of human audibility is about 15,000 vibrations per second, such a frequency can not be heard at all.

It is the function of the crystal detector or tube detector to so group the oscillations, that they are reduced to a frequency within audibility, or where the incoming wave carries voice variations as well, to bring these into the phones for understandable reproduction.

Where the impulses are weak, and fail to affect the tube or crystal de-

in the grid circuit the "R. F." impulses are impressed upon the grid of the tube and thence amplified at radio frequency. It is essential that the tube be of the amplifier type for such work, and the most suitable tubes at present available are the UV 199, the UV 201 and the UV 201 A. The WD-11 is fairly satisfactory but has more tendency than the others to do some of the detecting work.

Now comes the "trick" of the reflex. From the plate, the amplified radio frequency impulses pass through the primary of the radio frequency transformer. This little instrument is something like a vario-coupler, consisting of two windings placed upon a very finely laminated core of iron. It is the function of the core to "broaden" the tuning of the transformer or coupling device so that it is not necessary to adjust the wave length of it between the limits used by broadcasting stations. These are usually between 250 and 550 meters.

The by-pass condenser across the phones is needed to "pass by" the "R. F." oscillations along through the "B" battery and filament. As in the case of a vario-coupler, the current in the primary of the "R. F." transformer sets up a current in the secondary. Remember—this is still at radio frequency. Here is where the crystal comes into play. It is the detector, and it does its work very efficiently and clearly, too.

By the time the current reaches the primary winding of the audio frequency transformer, with whose operation most of us are familiar, the current has been "rectified" or brought within the range of human hearing. Again it is amplified, this time at an audible frequency, and the impulses once more strike the grid. Now the tube operates as an audio amplifier, and the results are most pleasing. Loud, and clear, far exceeding those obtainable with the ordinary one tube receiver.

How about the potentiometer? This is inserted for the purpose of applying

should be avoided if possible and the plan layout followed as much as possible. If it be found that the circuit functions fairly well with the cat whisker off the crystal, the leads from the secondary of the radio frequency transformer should be switched around to find the proper direction for current in that winding. The "A" battery is connected as indicated, and about 45 volts of "B" battery used with the tube. It should be pointed out, in closing, that an additional stage of audio frequency amplification, with which the same tube, "A" and "B" batteries may be used, will give results sufficient for the operation of the loud speaker ordinarily reserved for use with a three tube outfit.

The Valley of the Giants

(Continued from page 406)

through the general office. "It is postponed."

CHAPTER XXXIII

THAT trying interview had wrenched Shirley's soul to a degree that left her faint and weak. She at once set out on a long drive, in the hope that before she turned homeward again she might regain something of her customary composure.

Presently the paved street gave way to a dirt road and terminated abruptly at the boundaries of a field that sloped gently upward—a field studded with huge black stumps showing dismally through coronets of young redwoods. From the fringe of the thicket the terminus of an old skid-road showed and a signboard, freshly painted, pointed the way to the Valley of the Giants.

Parking her car by the side of the road, she alighted and proceeded up the old skid, now newly planked. On over the gentle divide she went and down toward the amphitheatre where the primeval giants grew. And as she approached it, the sound that is silence in the redwoods—the thunderous diapason of the centuries—wove its spell

Parts for Reflex Circuit

Vario-coupler.

3-.001 fixed condensers.
2-Switch knobs and points for coupler.

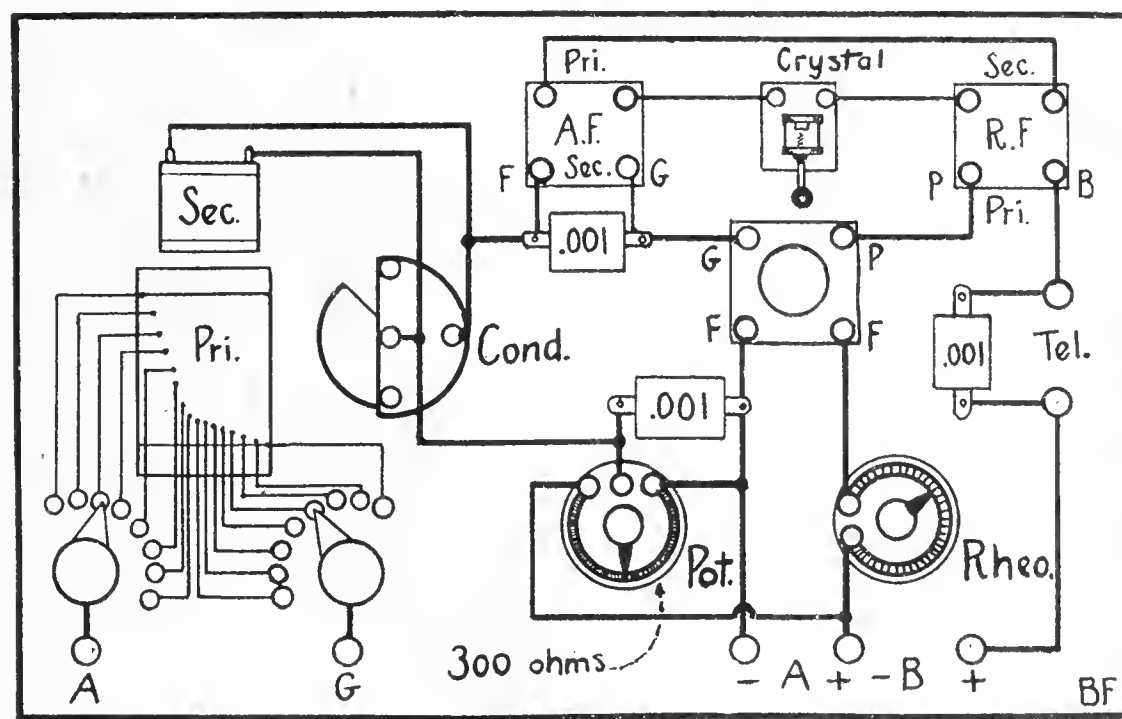

detector, it is utterly impossible, to add any form of audio frequency amplifier such as the "two stage" type recently described, in order to magnify the sounds. What, then, can we utilize to increase the strength of the incoming radio frequency impulses so that they may affect our detector?

There is a type of amplification known as "radio frequency amplification" which precedes the crystal or tube detector in order of sequence, and whose function it is to bring up the strength of very feeble impulses to a point where the detector is enabled to operate. The amplification takes place through one or more circuits and tubes which are not tuned sharply, but merely approximately, so that the circuit will respond over a fairly wide range of wave lengths without adjustment of the radio frequency amplifier itself. It is of course essential that the antenna and secondary circuits be tuned in the usual manner, by means of a vario-coupler, or honeycomb coils, or by any other means decided upon.

It is an abrupt step for the radio fan who has become acquainted with tube detection and audio frequency amplifiers, to add two or three stages of radio frequency to his set. "R. F.", as it is popularly termed, is a ticklish proposition to handle, and therefore it is advisable for anyone interested in learning about it to attempt some sure and certain variety of this interesting method of increasing the distance over which broadcasting may be received before starting off with the regular "R. F." hook-ups.

Perhaps the easiest scheme is that presented in the Reflex circuit. Not only has this advantages as far as increased distance and greater strength of signals are concerned, but it is also economical since one tube may be employed to do the work of two nearly as effectively. In the accompanying plan diagram is given the single tube reflex circuit as it is to-day adaptable for broadcast work. There is no question that it is superior in most respects to the average single to be regenerative receiver both for distance and for volume. And not only that, but the insertion of the crystal as the detecting medium adds wonderfully to the tonal quality of the music and speech.

It will be noted that the tuning of the antenna circuit is accomplished in the usual manner by the primary winding of the vario-coupler with its two sets of switch points. The secondary winding is tuned by a variable condenser of about 23 plates (.0005 mfd.). Through the fixed condenser

Here is the layout of the Reflex Set, which is well adapted for distance work.

a little voltage to the grid of the tube through the coupler winding. It is thus that the tube can be made to "oscillate" and produce almost as great an effect as that noted when a regenerative receiver is brought nearly to the point of oscillation. Thus it can be truly said that the reflex circuit not only amplifies, doubly, and detects, but also permits regeneration. And all with one tube.

One should be careful in purchasing apparatus for the circuit to select only the very best. A fairly good gauge of quality is the price, and the total cost of the outfit, not including phones, batteries and tubes, is approximately \$15. Including everything required from aerial to ground, the cost runs up to about \$35 or \$40.

In wiring the set, the parts should be placed in such a manner that connections are short. Parallel wiring

upon her; quickly, imperceptibly there faded from her mind the memory of that grovelling Thing she had left behind in the mill-office, and in its place there came a subtle peace.

A cluster of wild orchids pendent from the great fungus-covered roots of a giant challenged her attention. She gathered them. Farther on, in a spot where a shaft of sunlight fell, she plucked an armful of golden California poppies and flaming rhododendron, and with her delicate burden she came at length to the clearing where the halo of sunlight fell upon the grave of Bryce Cardigan's mother. There were red roses on it, and these she rearranged to make room for her own offering.

"Poor dear!" she murmured audibly. "God didn't spare you for much happiness, did He?"

Clothes For the Summer

Whether You Buy or Sell, Here are Smart New Styles

SOMETHING new is the apron frock, No. 1751, which slips over the head and ties about the waist, giving a neat effect but still being comfortable to work in. The design may be made up in gingham, voile, batiste or lawn, with embroidery on the pockets.

Pattern No. 1751 cuts in sizes 14 and 16 years, 36, 38, and 40 inches bust measure. For size 36, 4 yards of 40-inch material with $\frac{7}{8}$ yards of 36 inch contrasting is required. Price, 12c. Transfer pattern 626 (in blue only) 12c. extra.

A soft frock like this of voile, batiste or fancy lawn is certain to find a place in every woman's selection of Summer frocks. The waist just blouses the tiniest bit, for becomingness, and the sash ties in a perky bow to the side, for style. No. 1724 comes in sizes 16 years,

36, 38, and 40 inches bust measure and for the 36-inch size $3\frac{1}{2}$ yards of 36-inch material with 1 yard of 36 inch contrasting material is required. And most important of all—it can be made for little over a dollar. Doesn't that appeal to your sense of economy? Pattern, 12c.

the teen-age girl or the children of all ages.

A copy of this book is only 10c. In addition to the pattern designs, there are dressmaking hints, photographs of

made-up garments and other interesting features.

In ordering patterns, be sure name, address and numbers are clearly written and the proper amount is enclosed. Address Pattern Department, American Agriculturist, 461-4th Ave., New York.

PICTURE HANGING POINTS

One good picture is not only better than many poor ones, but is likely to be better than many good ones, hung

helterskelter. The Japanese hang but one picture on the wall at one time, and so enjoy it without being distracted by others near it.

The picture should seem to be part of the wall, not merely unconnected ornamentation, the home specialists at Cornell point out. The size and shape of the wall should be considered; if the space is long and narrow, a long and narrow picture should be used. It is hard to find a satisfactory place for a round or oval picture. A square frame is always easier to place.

A large picture needs to be hung in relation to the furniture; a table, chair or desk should be placed against the wall under it. Pictures should be hung flat against the wall and suspended from the moulding by two vertical wires.

The frame is supposed to relate the picture to the wall. Gilt frames almost never do this, but rather attract attention themselves, unless they have been much toned down. A frame slightly tinted in colors which repeat the colors of the picture and also of the wall is the best.

In general, the frame should be as dark as the middle tone in the picture. Most pictures are now framed without mats. If a mat is desired, black or white should never be used; it should match the tone of the frame and of the picture.

A SMART DRESS TO BUY

The fashion editor found this dress of mercerized cotton pongee and because it was good wearing material, made on simple lines and in a style becoming to all women, she chose it for American Agriculturist readers. The dress has diamond motifs embroidered

ered in the popular bright colors. The neck and slashed kimono sleeves are piped, and the full length panels blouse at waist and skirt hem.

The dress is R. W. 21. It comes in natural tan or copenhagen blue and in sizes from 34 to 46 inches bust measure (state waist and hip measure also). Price, postage prepaid, \$5.98.

Anything bought through the fashion editor may be returned to the store from which it comes for an exchange or refund if not satisfactory. Make out checks or money orders to the American Agriculturist. Be sure to give full name, address, size and color desired.

A HANDY KITCHEN DEVICE

The most pleasing and helpful thing in my kitchen is an enamel mixing bowl. It is so much lighter than a crockery ware bowl. One of mine is white enamel and holds six quarts, so that is ample for large amounts. The other is a three quart bowl. There is only one trouble with them—they are always on hand at dishwashing time, being used so often! These bowls can be had in many different sizes.—D. W.

Give a thought to Advertising

Baby chicks have become travelers. And all because of advertising.

In the old days, when a baby chick was hatched he spent his life right where he first saw the light of day, or anyway within a few miles of the place. But like most everything else, the life of baby chicks has changed and broadened with advancing times and methods. And the baby chicks of to-day can thank advertising for an opportunity to see something of their native country.

The chick born in Ohio is just as likely as not to spend its advancing years in New York or Massachusetts and vice versa. In fact he can go any place within a 72-hours ride of his birthplace.

Take a good look at the last pages of the American Agriculturist. What do you see? Maybe thirty advertisements of baby chicks. Advertisements from every part of the country east of the Mississippi. Probably your flock of hens is made up of chickens hatched as far as a thousand miles from your home.

So certainly advertising plays an important part in the lives of baby chicks. And a rapidly increasing part. In the last five years poultry—and especially baby chick—advertising has grown by leaps and bounds. Old copies of the American Agriculturist show only a very few poultry ads. Now they cover over a whole page. And the number is increasing every month. The poultry raiser's market has broadened from his local vicinity to over half of the country. He can raise his chicks in Maine and sell them in Florida. And advertising has made this possible.

Advertising has broken down the walls of distance. It has made neighbors of the rice growers of Mississippi and the potato growers of Maine. They shake hands through the columns of the American Agriculturist and other papers, profiting by their closeness and friendship.

Every little advertisement is equal to a whole army of messenger boys. One advertisement in the American Agriculturist is 120,000 messengers going to 120,000 different homes to take its message to the readers. And when you can send your message to so many people at the same time, you're bound to get results.

If advertising plays such an important part in the lives of poultry—and especially baby chicks—then think of what advertising means to us human beings. Just as much more at least as we are more important than baby chicks. And just as advertising has given baby chicks a chance to travel and see the country, so has it given the farmer a chance to take an increasingly active and profitable part in affairs of the whole nation. So who can deny that it pays to give a thought to advertising?

Advertising Manager

That Graduation Picture

Help the Photographer to Do You Justice

HUNDREDS of pictures of graduates from grammar, high school, and college will be taken this spring, and it is a safe guess that fully half of them will be voted "perfectly terrible," "a libel" and other unkind things by the subjects and their friends. But it will not always be the photographer's fault. There are simple rules for sitters to follow, which, if disregarded, may spoil the best effort of the most expert photographer.

Children should be simply dressed—the more simply the better. Light or white clothing is desirable. The hair should not be "slicked down" nor yet curled until frizzy. Sometimes a little disorder is most natural.

Don't make your child self-conscious by talking beforehand as though photography was an ordeal. Don't instruct the child how to pose or what expressions to assume. If necessary to call the attention of the photographer to a stiff or unnatural expression, do so if possible without letting the child notice it. Never have more than one person besides the photographer in the room.

raising them from seed, and found it could be done easily.

It is best to sow the Marguerite seed. This variety comes into bloom earlier than any other I know. If well cared for, the plants will blossom in four months from the time of sowing seed. I sow the seed in the hot bed, just about this time of the year, but they could be sowed in boxes of prepared soil in the house late in March. They should be kept moist until they germinate. When about one inch high, I transplant to another part of the hot-bed and the seedlings immediately begin to stock up and become thrifty plants.

They are left here and the dirt often loosened around them until they are about four inches high. They are then transplanted in the open ground and left until the latter part of September, when they are potted. They should be cultivated through the summer—the oftener the better.

When potting for winter use a rich, tenacious soil, having a good drainage, as the plants do not thrive in a soil that does not hold together well when

THIS IS WORTH MEMORIZING

PEOPLE try to persuade me out of farming. * * * Is there any other pursuit that furnishes one fraction of the joy, as a by-product, that farming does? Here I was just going out for posts, and what blossoms and poetry did I not come upon? No matter how exasperatedly one starts out, one returns rewarded, whether it is from a trip to the barn on a stormy evening, when your lantern makes a golden richness in the brown shadows, and everything smells of hay and milkiness, and the beasts are so sleepily pleased to see you that they quite melt your heart; or from a dash through a star-lit barnyard, on some anxiety or other, with a freezing wind blowing, but with Venus and a young moon putting your eye out over the top of the wall; or from a fagging jaunt in a twilight rain after escaped ponies, when the graying mountain world grows beautiful beyond any dream, and one pushes the soaked hatbrim away from one's eyes and thanks Heaven for sending one out to see it. We are too lazy or too busy, or too unrealizing, to get at beauty; we have to be shoved out into it, and if it is your vocation that does the shoving, thank it with all your soul. Give up farming? Not while I love air and moonlight and gray rain and birdsong and the woods—and a million other things.—From *THE LONE WINTER*, By Ann Bosworth Green.

Girls and women should also follow the rule of simplicity in dress and pose. Dress the hair as it is usually worn; don't use a net. Sit or stand comfortably; if you are in a strained position the picture will surely show it. Don't wear a dress of a decided figured material, one with many ruffles or any other pronounced feature that may soon go out of style. A smiling picture, though often attractive at first, is apt to grow wearisome after a while.

The stout woman should wear a dark gown, with downward lines, such as those given by long strings of beads or a lorgnette. Her thin sister may wear any light gown, short strings of beads, a fur neckpiece or a light tulle scarf.

Dignity and simplicity should characterize a man's portrait. Dark clothes and patterns are best, while checks, decided stripes or bright contrasting colors in tie or shirt should be avoided. Except for the simplest possible scarf-pin, jewelry is not good taste. Full-figure pictures of men are rarely good, with the possible exception of one in a uniform. A man, even more than a woman, must be simply photographed, with a natural, unaffected pose and expression.

After all, it is the person whose picture we want, and clothes, furniture, fans, diplomas and other accessories are not only unimportant, but often distract the attention from the subject. A good photographer puts the personality of the individual above every other detail, but the sitter should aid him by following the rules of simpleness and naturalness, which are, after all, only those of good taste.

RAISING CARNATIONS FROM SEED

I once thought that if I had carnations I must get them from the florist. At our house we are all very fond of the spicy beauties, so I decided to try

moist. To get bushy plants while in the ground, nip the tops off as fast as they shoot up.

At the time of potting for winter, the plants are loaded with buds and must be handled carefully. I get best results when I put them in tin cans, each plant then gets just the care it needs. If kept in a moderately cool, moist room they will bloom all winter.

The greatest error made in amateur carnation culture is keeping the plants too warm. An upstairs sleeping room is about the right temperature. If too warm, the buds will blight and the plants become infested with green aphids. In this event, moisture and frequent sprinkling are the best remedies.

From a package of seeds I have often raised twenty-five plants, the greater portion of them full and double. If I do not care to have them blossom in the winter I can transfer them to the cellar and put in the open ground the next season.—MRS. GEORGE GRAY.

A LIFE-GIVING MEASURE

"What is in the mind of the rural woman? She wants to know the physiological aspects of motherhood and to bear and bring up her children in an atmosphere of enlightened education rather than of ignorance and fear."

When E. C. Lindeman said this before an audience of farm women the sudden outburst of applause showed that he had touched a theme very near their hearts.

That education means health, for mother and child alike, is the underlying principle of the Sheppard-Towner act, passed by Congress and unwarrantably delayed in New York State by legislative inaction. Eighty-six of every thousand babies in the State die in their first year and the death-rate is highest in the country.

The act will actually save life. There is no excuse for sacrificing it to politics.

18 EVER-BLOOMING ROSE BUSHES YOURS

AS A GIFT For Only 2 Yearly Subscriptions for *American Agriculturist* at \$1.00 each. Your own renewal may be sent as one of the two subscriptions required.

No reader can afford to miss this mammoth gift offer—the greatest collection of plants we have ever given.

What can add more to the charm and beauty of your home than bowers of exquisite fragrant roses? Roses breathe sentiment and happiness. No home is complete without this remarkable collection of 5 pink, 4 white, 5 red and 4 yellow roses. One of them is a climber. These rose bushes are guaranteed to reach you in good condition in proper time for planting in your locality.

The entire lot of 18 rose-bushes will be sent you, postpaid, for only two yearly subscriptions at \$1.00 each. Address

Reviewing the Latest Eastern Markets and Prices

HAY-PERMIT SYSTEM ABUSED

ATTENTION has frequently been called on this page to the abuses that were possible in the administration of the permit system that has been used by the railroads for controlling hay shipments to the New York City market. Under this system the railroads, particularly the New York Central, have issued quantities of permits to receivers of hay in the market proportionally, supposedly, to the amount of business these receivers did, and these permits were then forwarded to the shippers. They were used quite generally by receivers as a means of soliciting business for themselves, it being impossible for shippers to send hay here on consignment without having such a permit.

A few weeks ago, when the New York Central ceased to issue any more permits because of congestion, the hay shipments continued to come in with very little difference. Complaints were made to the New York Central, and an investigation revealed that permits issued as far back as early in 1922 had been altered and used for present shipments.

As a result of the discovery of this condition, a conference was held this week between the receivers and representatives of the N. Y. C. R. R., at which the railroad agreed to begin a new system of issuing permits in May. This new plan involves the issue of a certain number of permits to each receiver, probably on the 1st and 15th of each month, these permits to have time limits of fifteen days. There will be a system of checking to prevent duplication or other misuse.

This may be an improvement over the old system, but it will still permit of favoritism and a great amount of abuse, and makes it practically impossible for any independent shipper who is not working with an established receiver here to send hay into this market. In our judgment the hay producers and shippers should protest against the continuance of the permit system at all.

The local hay market dragged along last week, and prices tended lower on medium and low-grade hay. A shipment of two river barges arrived early last week containing chiefly lower grades. It is reported that there is a large quantity of hay on hand at country points and an abundance of Canadian hay, which would be sent here at the first opportunity.

Rye straw continues scarce, selling generally at \$32 per ton for either State or Jersey.

POTATO MARKET WEAK

Heavy arrivals of old potatoes in New York City yards, over 300 cars, and a good supply of new have made prices react sharply. Warmer weather has a tendency to slow up the trading.

States are offered in car lots, delivered not freely at prices ranging from \$3 @ \$3.50 per 150-lb. sack; Idahos at \$2 cwt. in uneven-weight sacks; Wisconsin round whites at \$2.80 per 150-lb. sack.

Maines in the yards are selling from \$4.50 @ \$5 per 180 lbs. bulk; Long Islands, same amount, \$6; States, \$2.75 @ \$3.50 per 150-lb. sack. Floridas on the piers are selling at \$9 @ \$10 bbl.

Many buyers will feel inclined to favor new potatoes if the arrivals continue to increase.

The Crop Reporting Board of the United States Bureau of Markets estimates that the planting of Irish potatoes this year will be 90.9 per cent, and will be 99.6 per cent of the average annual acreage in the last five years. The decreases in planting are noted in Maine, New Jersey, South Dakota, Nebraska, New York, Wisconsin, Virginia, Michigan, Colorado, North Dakota, and Idaho.

EGG SUPPLIES INCREASING

The more seasonable weather has brought a larger production of eggs, and the movement to the large markets is steadily increasing. There was a much heavier supply of average quality near-by eggs in the New York market last week, and there were liberal offerings at 29 @ 31c. Fancy near-by hennerly white and brown eggs were relatively scarce, however, and the mar-

ket was steady for them. Prices in general showed very little change during the week, but a considerable proportion of average quality eggs were probably sold at prices somewhat below quotations.

The movement into cold storage has increased, but the supplies are still much shorter than last year. Buying for storage purposes was not as brisk last week as the week previous. Many operators held off expecting lower prices in May.

GOOD DEMAND FOR BROILERS

Receipts of spring broilers were light last week, and the demand for them continued very active. Prices continued at previous levels, the best colored stock bringing 65c. each and leghorn broilers 55c. Some leghorn broilers of lighter weights sold at 40c. and col-

than last year, and the indication is that the large purchases for storage will be around 38 @ 39c. seaboard.

CHEESE MARKET STEADY

The wholesale cheese market was firm last week. Prices on State whole milk, held; flats, average run, held steady at 27½ @ 28c. lb., and fresh flats, average run, sold ½c. higher.

Storage stocks in the four large markets, April 26, amounted to 4,616,551 lbs., compared with 3,889,618 lbs. at this time last year. Receipts at New York last week were over 60,000 lbs. in excess of the previous week.

Production in Wisconsin is still running slightly ahead of last year, the increase being estimated at about 8 to 10 per cent. It is reported that many more up-State factories have contracted their entire output for the

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on April 26:

Eggs, Nearbys (cents per dozen)			
New Jersey hennerly whites uncandled, extras...	38 @ 39½
Other hennerly whites, extras.....	35 @ 36
Extra firsts.....	32½ @ 34	30 @ 31	28½
Firsts.....	30 @ 32	26½
Gathered, whites, first to extra firsts.....	30 @ 34

Sheep, common to good ewes.....	3½ @ 5½	6½ @ 7½
Hogs, Yorkers.....	8½ @ 9	8½ @ 8¾

ored at 60c. With larger receipts these prices would probably decline somewhat, but the condition of the market is very good.

The market for fowls was quite irregular last week, and all sales were not made at the publicly quoted prices. The demand is chiefly for fairly light stock, and express shipments of light fowls sold at 29c., with the heavier at 28c. per lb.

BUTTER CONTINUES LOWER

Wholesale butter prices continued to decline last week and were on April 26 2½c. per lb. lower on all grades of creamery. Creamery extras, 92 score, were quoted April 26 at 42c., compared with 44½c. a week previous. It is the opinion of the New York wholesale trade that prices are still several points above the level at which it is practical to put much butter into cold storage. It is expected that another week or two will pass before still larger production results from turning stock on to pastures, and large storage movement will begin.

Last week the movement out of storage at New York exceeded the movement into storage. The amount on hand in cold storage in four large markets April 26 was only 1,379,908 lbs. compared with 2,420,816 at this time last year. The receipts of butter at New York last week were only 500 lbs. in excess of the week previous, and were 7,000 lbs. below the receipts in the same period last year.

The Boston and New York markets were about the same in price last week, but Philadelphia was about ½c. lower at the end of the week, and Chicago 2c. lower. A number of fairly large sales of creamery extras for June delivery have been reported at prices ranging from 39½ to 41c. per lb. Undoubtedly the prices this summer will be higher

season, and the shipments of uncontracted State cheese to New York will be very small.

HONEY PRICES FIRM

The New York market on honey last week was rather quiet and trading principally in small job lots, but prices were firm due to a very light supply of domestic honey and still lighter supply of foreign goods. New York comb buckwheat remained steady at \$3 @ \$4 per crate and extracted at about 9 @ 10c. per lb. Clover in the comb per case \$3.50 @ \$4.50, extracted per lb. 9½ @ 10½c.

MAPLE PRODUCTS HIGHER

The high price of sugar may tend to help the market for maple sugar and maple syrup. The bulk of the sale of blended syrups comes in the fall but since the prospect is for even higher prices of cane sugar in the fall, it is possible that the demand for maple sugar at better prices than last year will be active before then.

Farm packed pure maple syrup of irregular quality is quoted at New York at \$2 per gallon and maple sugar at 25 @ 30c. lb. The best graded uniform quality No. 1 syrup from both Vermont and N. Y. State is selling in a limited way in gallon tins at higher than \$2 per gal. wholesale. No firm price yet established on Vermont sugar.

LIVE CALF MARKET STEADY

Although very heavy receipts of live calves at New York on Monday, April 23, caused a sharp break in the market, the receipts were very much lighter the rest of the week, and the market tended to be generally steady. Prime live veal calves sold per 100 lbs., April 26, at \$11.75 @ \$12; fair to good, \$10.50 @ \$11.50; common to medium, \$7.50 @ \$10.50; and culls, \$6 @ \$7. Quality

had to be choice to command the outside figures. At the end of last week there were no live sheep and lambs on the commission market, all consignments being direct. The tone appeared to be steady to firm. Spring lambs, if prime, would bring about \$19 @ \$20.

DRESSED VEALS LOWER

Country dressed veal calves declined considerably last week, choice bringing on April 26 only 14c. per lb., compared with 16 @ 17c. last week; good to prime on April 26, 11 @ 13c.; poor to fair, 8 @ 10c., common, 4 @ 7c. All these prices are considerably below last week. There is a shortage of really choice and fancy veals, but an abundant supply of ordinary quality dressed lambs were fairly plentiful last week and in good demand when of desirable weight. Prices, April 26, for poor to good country dressed lambs were \$3 @ \$9 per carcass; choice hothouse, \$10 @ \$11.

WHEAT-FEED TRADE BRISK

Lighter offerings and brisk demand brought higher prices on wheat feeds last week. Trading in other feeds was quiet. Buffalo market prices, April 26, on carlots, Buffalo rate basis in 100-lb. sacks, sight draft, were as follows, per ton:

Gluten feed, \$39.55; Cottonseed meal, 36%, \$47.25; Cottonseed meal, 43%, \$53.25; Oil meal, \$43; Dried brewers grains, \$34; Standard spring bran, \$35.25; Hard winter bran, \$35.75; Standard spring middlings, \$34.75; Choice flour middlings, \$37; White hominy, \$34.80.
Corn advanced one-half cent per bushel. No. 2 yellow corn sold per bushel at 95c; No. 2 white oats, 53½c; Barley, feed, 73 @ 77c; No. 2 rye, 95c.

CASH GRAINS IN NEW YORK

Cash grain quotations at New York, April 26, were as follows:

"They Ain't Goin' To Be No Core"

The Festering Sore in Civilization—By Henry Morgenthau

The Good Old Reliables

A. A. Radio Talk on the Benefits of Greater Consumption of Bread and Milk

WHEN I was a boy, the Sunday dinner hour was half past one o'clock. The time between breakfast and that belated meal was so long that every Sabbath day I nearly died of hunger. This inordinate appetite of the occasion caused such gorging of the stomach as to make another regular meal out of the question. Therefore, the evening meal of Sunday was always bread and milk.

There is a saying old as the hills, that "bread is the staff of life." In certain age groups milk is almost as essential as air and water. Without doubt the old-fashioned dish of bread and milk is one of the best that can be planned.

To eat too much of too many kinds of food is a common fault. We should strive to make our lives simpler and there is no better place to begin than by eating simpler meals.

Bread and milk, if we never took any other food, would restore waste, supply energy and accomplish practically everything food is expected to do for us. Add to this dish a few green vegetables, a leafy salad, or a little fruit, and we require nothing else.

There are three kinds of food—protein, fats and carbohydrates. Bread and milk supply them all. If I had my way I would include in every daily dietary a quart of milk and a half loaf of bread. If this were the practice of each of us, kidney, liver, intestinal and other ailments would be much less frequent.

When I speak of bread in this enthusiastic way I refer to the product made from a flour unrobbed of its mineral and rougher portions. I cannot get pleasantly excited over the denatured and bleached flour of commerce. There is no particular harm in them, but neither is there any particular good. One might as well eat candy and call it the staff of life. In its place candy is a desirable food, but no one pretends that it supplies anything but the energy-needs of the body. Real flour made into wholesome bread is invaluable to our welfare.

When I refer to milk I speak of clean, bacteria-free, whole milk. It must come from healthy cows. It must be received and transported in clean receptacles. It must be handled by clean persons. If not pasteurized it must be delivered immediately after milking. It must be kept in a cool, clean place.

There is no other article of food so delicate and easily contaminated. On this account, unless properly kept, this precious food may be changed into a poisonous and dangerous article.

But when the milk is properly prepared and unrobbed of its butter fat, it must be counted first of all our foods.

In normal time the United States ships abroad a tremendous amount of wheat. Our exports are about 170,000,000 bushels. Poverty and currency depreciation make it impossible for Europe to buy our products.

What is to become of the surplus grain? This is a serious problem and it must be solved. Otherwise, agriculture, the foundation of American prosperity, will suffer untold damage. Unless the farmer prospers, the national welfare declines. There must be found some means of absorbing this surplus of wheat. The happiness and well being of the Nation demand it.

A few days ago a great expert told me the whole problem would disappear if everybody

By DR. ROYAL S COPELAND

would eat an extra slice of bread at every meal. To do this would require an extra annual supply of 170,000,000 bushels of wheat.

My first thought was this: If we eat more bread we will eat less meat and other farm products; therefore, we would help the farmer one way and damage him another.

But the expert had a very convincing answer. If the surplus wheat were converted into flour and then baked into bread, the process would require great quantities of other products.

For instance, to make the necessary yeast to prepare this vast mountain of bread, would require 1,500,000 bushels of corn. An equal quantity of corn would be needed to fatten the four million hogs from which the lard would come. The pastries made from the flour would increase the demand for corn

A Boost For Farm Products

THE address on this page by Dr. Royal S. Copeland, United States Senator from New York State, is another one of the American Agriculturist farm radio talks which are attracting so much attention throughout the East. Dr. Copeland was formerly Commissioner of Health of the City of New York, and knows whereof he speaks. He had an audience of 500,000 people when he broadcast for us from the WEAf station on Wednesday evening, May 9, at 6:30 P. M. Standard time. With such a great audience you will see, when you read his address, what a strong argument he has given for a larger consumption of milk and other farm products.

We ask you again if you like these talks to let us know. Give us suggestions as to what you would like to have broadcast, and whom you want to hear speak.—The Editors.

starch, another corn product. The farmer would be called on for at least three and a half million bushels of corn for these purposes.

To bake the surplus wheat into bread would require an ocean of milk. The daily consumption of milk in New York City is three million quarts. Poured into quart bottles and then placed side by side these would make a line 167 miles long. To make the surplus wheat into bread would require the amount of milk used by New York for 220 days, or almost four thousand miles of milk. Two hundred million pounds of milk powder or condensed milk would be used if one of these products were substituted for fluid milk.

Greater Market for Butter

A billion pounds of butter would be called for to spread on the bread. Great quantities of rye and barley, in addition to the corn, would be needed to make the yeast.

Sugar, jams, cheese and sauces would be demanded. Fruits for the pies and all the other ingredients used for fillings would be increased in consumption.

To carry all the flour made from the surplus wheat, there would have to be cotton sacks. This demand would require forty million yards of cotton goods, creating a demand for the cotton growers' crop.

Think what a lot of good would be done for the farmers of America if we were to help them by consuming the wheat normally sent abroad. But we would be doing ourselves a lot of good. There is no better food than bread when made of the whole grain and not from denatured and devitalized flour.

The national health would be benefitted and each of us would add to the expectation of life. This plan to eat the surplus is well worth while. Let us go ahead with it.

In bread and milk we have a combination of foods, possessing all the elements for health and growth. The mother who learns these truths and applies them in the home, has started her children on the way to a vigorous life. Strong bodies, good brains and pure blood are made by bread and milk.

Let us aid the farmer and promote health by consuming quantities of these simple, but essential food stuffs.

* * *

I have filled out the Radio Questionnaire and am sending it in. I enjoy the program from station WEAf and every Wednesday evening I hear your fine program. Keep it up, you are doing fine. Indeed, I think your program the best of any that is broadcast on Wednesday evening.—O. H. F., West Valley, N. Y.

* * *

We do not feel one bit isolated in our country home. We enjoy the broadcasting from WEAf. It is fine. We have a three tube set and have listened in on the program of 38 different stations from New York to Los Angeles.—W. W. H., Canfield, Ohio.

* * *

Your radio lectures are excellent. Keep them coming. We are most interested in marketing, feeding and cooperation.—E. L. B., College Park, Md.

* * *

I had the pleasure last Wednesday evening of listening to the radio address of Enos Lee of the New York State Farm Bureau Federation on Cooperative Marketing. It seems to me that this address is worthy of still further

broadcasting. I would appreciate it if you would send a copy of Mr. Lee's address to a number of persons whose names I am enclosing on a separate sheet.—H. B. A., New Brunswick, N. J.

Quotations Worth While

Our principles should not be like the slender cornstalk which the north wind will blow one way, and the east wind another, and which the first storm will blow over; but they should be like the mighty oak, with its roots so firmly spread out in the earth that no wind can shake it, and no storm fell it to the ground. If our principles should have similar firm roots, deeply planted within our hearts, no temptation, however strong, will allow us to waver for a moment in doing our duty.—M. L. M.

* * *

I expect to pass through this life but once. If therefore, there be any kindness I can show, or any good thing I can do to any fellow being, let me do it now. Let me not defer or neglect it, for I shall not pass this way again.—STEPHEN GRELLET.

* * *

Lying is trying to hide in a fog; if you move about you are in danger of bumping your head against the truth; as soon as the fog blows up, you are sure to be discovered.

* * *

A man should never be ashamed to own he has been in the wrong, which is but saying in other words that he is wiser to-day than he was yesterday.—POPE.

* * *

Hate is a bad spirit to face the world with, my boy. Hatred is heavier freight for the shipper than it is for the consignee.—AUGUSTUS THOMAS.

The Festering Sore in Civilization

Three Hundred Million People Facing Ruin

THE present European population is about 450 millions, or more than four times the population of the United States. Of this vast number over three hundred millions are in a worse than subnormal economic and social condition as a result of the World War.

Those of you who have been reading the newspapers know that the finances of practically all the European countries are almost hopeless. It takes 33,000 German marks or 71,000 Austrian crowns to make one dollar; and it takes 5,400 Hungarian crowns or 45,000 Polish marks to do the same; as far as Russia is concerned, it takes an inconceivable amount of rubles to equal a dollar. Even in the countries that are not so badly off, like Italy, France and Belgium, the present currency is from one-fourth to one-third of its par value. I give up the attempt to make my readers understand what it means to live under a currency so changed as Germany's, where it is 1/8000 of what it formerly was; but we can try to grasp conditions in France, Belgium and Italy.

Just to bring this home to you: What would it mean to you if the dollars that you have in your bank, or that you have invested in first class securities, or in your farm, should suddenly depreciate so that they would be worth only one-fourth of their former value? Suppose your former income was \$800 a year, and that you were suddenly confronted with the necessity of adjusting your expenses to an income of one-fourth of this, or only \$200. The question would not be what would you deprive yourself of, but what your reduced income still permitted you to spend for yourself, your children and your family, and for your farm to use.

The difficulties in these countries with the declining currency are simply heart-rending. All the people of the middle class have been compelled to dispose gradually of most of their furniture, extra clothing, jewelry, silverware and pictures, at very insignificant prices. So that millions are living in bare rooms with empty larders and without more clothes than they have on their backs; and I am reliably informed that in Berlin alone every day at least fifty of these much-to-be-pitied high spirited middle-class people, incapable of soliciting charity, are driven to commit suicide.

By HENRY MORGENTHAU

But the picture is still incomplete without considering what becomes of these people's children who would have been their successors, who would have made up the middle class of the future, and carried on the civi-

about suffices to buy them one suit of clothes or ten pounds of butter.

But recently I had verbal reports from a man from Petrograd. He told me that its 3,000,000 inhabitants has shrunk to about 700,000; that hardly a single structure in the city has had any repairs since 1915, that the numerical as well as the physical decline of the population has been followed by the still greater decay of the great city itself. To a greater or lesser degree, this prevails all over Europe. The picture painted by Goldsmith, of "The Deserted Village," though drab indeed, shrinks into a poetic effusion when compared with the tremendous tragedy that has just been enacted in Europe.

Last year I had a conference with a group of Germans. They all were leaders in their various trades or professions. These men

were between fifty and sixty years of age. Each one admitted that he had lost all hope of ever recovering from his present depressing financial status. The general story was that they had accumulated during their long active career by careful saving and judicious and fortunate investments from two hundred to three hundred thousand marks, and that their annual income from this amount

was about fifteen thousand marks. Before the war, this was a competency; now it means just one half a dollar!

I asked the doctor present whether it affected him, and I stated that he no doubt was an exception because he could charge his patients modern fees. He answered me, "Would you have the heart to charge your friends anything, when you know that they have nothing?" No doubt some of us have despondent moments, but these men, and all of their kind living in most of the European countries, are suffering from permanent despondency.

If one reads an account of the Thirty Years' War, when Germany's population was reduced to one-third and its wealth to one-fourth, and the terrible results that followed this economic decline, famine and disease, he will be struck by the similarity of those awful times to those that now prevail in Europe. It is conditions such as these, just a few of which I have mentioned, that constitute a problem that is troubling every thinking person in the world, including our American financiers,

(Continued on page 418)

The Truth About Europe

IF you want a clear-cut, concise picture of the European chaos, you will get it in this article by Ex-ambassador Morgenthau. It is another one in the series that we are giving to state and interpret the plain facts about great world events in which farmers are interested. These articles are attracting a great deal of attention. We have received many letters, a few of them criticising, but the most of them commending our idea, that one purpose of an agricultural newspaper is to discuss and interpret some things besides farming in which farm people are interested.—The Editors.

zation. These children are not sent to school because they cannot be fed nor clothed by their parents. They are compelled at ten years of age to go and attempt to earn a living. Though they have inherited the taste for education, music, painting and other high attainments, they are absolutely and completely deprived of developing this tendency and of perpetuating the bulwark

As has always been the case in history, the castle dwellers of Europe started controversies and wars that the middle classes had to finish and pay for

of Europe, which has been the middle class.

The teachers and scientists, and in fact almost all of the entire vast class that did the brain work of Europe (and do not let us forget how much they have contributed towards the progress of arts and sciences, and what tremendous benefits we have had therefrom), have had almost to cease their activities through inability to secure books and instruments to pursue their studies and experiments, and food to keep them alive. Their entire yearly compensation now just

Rural School Bill Carried Over

THE bill known as the Rural School Bill, which contains the suggestions for rural school improvement made by the Committee of Twenty-one, will not pass this session. The New York State Senate voted for it with only six votes in the negative. It then went to Rules Committee in the Assembly, which committee decided not to report the bill out.

The bill was defeated on the grounds of expediency, for the Assemblymen adopted a resolution commending the principles of the bill. The most of the opponents of the bill in the Legislature and out of it, admit that it is right—a rather strange situation, for if it is right, what real defense is there for not passing it now?

As we have before stated, the Rural School Bill would have provided for a larger local control of the schools, would do away with compulsory consolidation, improve the qualifications of rural school teachers, and in many other ways would have led to a much better rural school system. We believe that farmers will be bitterly disappointed that this bill did not pass when they realize that, had it passed, the school taxes in a majority of the districts of the State would have been materially reduced. This lower tax rate would have come about in most districts because of the equalization provisions of the bill, and especially because the cities would have paid a greater portion of the larger aid which would have come to the rural school districts from the State.

The cities voted for this bill this year. Whether they can be convinced again that it is to their interest to support a bill for improving rural schools, which will mean more taxes for the cities, is, of course, problematical. In the meantime, because of the failure of the Legislature to accomplish much this year along educational or other lines, except to quarrel among themselves over political issues, the farmers will continue to pay the large school taxes without adequate results in school facilities for country children.

American Agriculturist will continue to discuss the educational provisions of the

Rural School Bill so that next year the demand for it will be so strong no legislature will dare to turn it down.

"The Brown Mouse"

IT is with considerable pleasure that we are able to announce that we have secured a serial story, "The Brown Mouse," by Herbert Quick, for publication in American Agriculturist. The first installment will begin in our May 19th issue. Because this story is of particular interest to farm people it was sought for by several farm papers, and we happened to be the lucky one to secure the rights for publication in this territory.

Herbert Quick is also the author of "Vandermark's Folly", one of the best stories that has ever been written of farm life and conditions during the early days of this country. Mr. Quick was formerly a member of the Federal Farm Loan Board, and was once editor of "Farm and Fireside", so his viewpoint enables him to write with sympathetic understanding of country life.

"The Brown Mouse" is a story of a hired man who became a school teacher with the strange idea that the schools should teach in the terms of life and of the farm, instead of theories that may never have practical application.

We have often said that people who live in the country have too little opportunities for recreation. It is with this thought in mind that American Agriculturist carries one first class serial story all of the time. We wish we had more room for fiction. Most country housewives do not have time to read books even if there is money to buy them, but a few moments can usually be found each week to read an installment of a good continued story. Hundreds of women have told us that this feature of American Agriculturist was worth more than the price.

Martyrs To Principle

OVER in Russia the other day the Soviet Government tried some Catholic priests for treason. They were not guilty of treason as normal men understand treason, but in Russia the Red Government frowns on all religion, and these priests had insisted on preaching and practicing the tenets of their faith. The bearing of these Christians during their unfair trial is one of the sublime events of history. No soldier going into battle, or Christian martyr on the way to the stake, ever faced certain death for a great cause with more calm courage.

There was little or no evidence against them, and their own clear-cut and positive answers in regard to their religious practices, which were against the Bolshevik law, sent them to their death or to long imprisonment. Every one of the clerical prisoners were asked whether they taught the catechism to children, and every prisoner answered "Yes." Under the Bolshevik law, it is a crime to impart any religious teaching to anyone under eighteen years old. When asked if they would continue such teaching, the reply in every case was the same.

In describing these answers, an American reporter who was present said: "The archbishop's face lit up with pleasure and surprise when he answered. It was as if he could see the way to accept a miraculous gift of health, youth, and unlimited riches."

"Behind the archbishop was the young priest, Edward Yunevitch. Joy flashed in his eyes and irradiated from his whole countenance when asked if he would cease teaching children their catechism. Joyousness so marked his voice in his answer, 'No,' that the three Bolshevik judges, who were all smoking cigarettes, looked up simultaneously in surprise. The priests were asked if after the churches had been closed they had con-

tinued to say mass, and they answered, yes, of course, they had all said mass."

On the day when the death sentence was passed on the archbishop, he was asked if he had anything to say. Again we quote the American reporter: "The archbishop rose to his full height and delivered an address so touching and so simple that a profound hush, with something of awe in it, settled down upon the hostile audience of Red soldiers, atheists, sneerers, and demoralized students. The archbishop denied, as did all those who spoke after him, that he had belonged to any political organization or had engaged in any counter-revolutionary intrigues. He had confined himself to teaching his people the truths of his holy religion, the same truths which the church had taught for nearly two thousand years."

"The church had never taught the people to do wrong; he had never taught wrongdoing; he had never taught anything that did not tend to good morals and good citizenship. 'To-day,' concluded the archbishop, 'I stand before a temporal judge; to-morrow maybe I shall stand before an eternal judge, and I hope the temporal judge may be just to me and the eternal judge merciful.'"

The sentence of death was pronounced against the archbishop and one of his priests, Butchkavitch, and his companions were all sentenced to prison. World-wide protest led to the commutation of the archbishop's sentence to ten years solitary imprisonment, but Butchkavitch was shot by a firing squad.

There are times in human affairs when one needs all his philosophy, all his faith in humanity, and all his belief in the ultimate triumph of right to keep from cynically thinking that the whole world is rapidly becoming evil and that everything and everybody are going bad. The period since the war is such a time. The amount of ignorance, prejudice, selfishness, business trickery, and immorality, which seem so rampantly on the increase, is particularly disheartening and disillusioning.

But always at such times there are examples of sublime living and sacrifice for high ideals which far outbalance the evil and renew our faith in the ultimate goodness of our fellow men and in the whole general scheme of things.

The Instinct for the Soil

"A MORAL crisis," says Mr. Herbert Quick in his story "The Brown Mouse", "accompanies the passing of a man from the struggle with the soil to any other occupation, the productiveness of which is not quite so clear. I believe that this deep instinct for labor in and about the soil is a valid one, and that the gathering together of people in the cities has been at the cost of an obscure, but actual moral shock."

"I doubt if the people of the cities can ever be at rest in a future full of moral searchings of conscience until every man has traced definitely the connection of the work he is doing with the maintenance of his country's population."

Mr. Quick is right. The change from agriculture to a less productive occupation is a moral shock seldom realized, but there just the same; and because this is so, we cannot look with any pride upon the great change that has taken place in our country from an agricultural to a city population. Because of our modern methods of living there is no way for a nation to avoid the packing of dense population into the city. But the fact that a majority of our people now do live in the cities, makes it all the more necessary for the nation to do everything possible to maintain upon the land the same strong, prosperous, intelligent people that the American farmers have been in the past, so that through them the whole nation may receive the purifying influence of the soil.

One Year's Stewardship

Publisher of American Agriculturist Reports to 120,000 Reader Owners

IT is just a year ago that I purchased the American Agriculturist. Never has a year passed so quickly or been so full of important events. At the time of the change of ownership, I said "I intend that the welfare of my readers shall be the controlling consideration in the direction of the affairs of this publication. I propose to command your support by deserving it. I shall hope to strengthen the ties that have bound you to this publication." Let us stop a minute and consider whether or not, as a steward of your paper, I have hewn close to the line of my pledge given you one year ago:

The first move that I made to improve the paper was to strengthen the staff and to secure the best writers in their particular field as regular contributors to the American Agriculturist.

Mr. George T. Hughes, on May 20th, joined the Contributing Staff of the American Agriculturist, and through his articles and advice on financial matters, has been able to render a real service to our readers and has saved them thousands of dollars which otherwise might have been invested in questionable securities.

Miss Gabrielle Elliot, on June 3rd, became Household Editor. Under her direction the Household Department has become a very important part of the magazine. She inaugurated a shopping service for our women readers whereby they could buy through her, the latest New York styles at reasonable prices. She introduced Aunt Janet to our readers. She has developed our patterns to a point where we sold 24,000 last year. Her recipes have made many a husband happy.

The next move was to secure Herschel Jones. His weekly market review and forecast have steadily grown in interest and importance and are a daily help to our readers in guiding them in the sale of their produce.

An epoch in the history of the American Agriculturist during the past year was when on September 2, 1922, Jared Van Wagenen, Jr., consented to write exclusively for the American Agriculturist. His column has won for him a warm spot in the hearts of thousands.

Paul Work joined the paper on September 9, 1922, and since that time has been writing on truck, vegetable and market gardening—a department which has grown to be a very important one during the past year.

E. R. Eastman Becomes Editor

During the first three months that I owned the paper, I hunted high and low for a man who would stand out head and shoulders above the crowd as the best editor available in the United States for the American Agriculturist. In E. R. Eastman, our present editor, I felt I had found this man, and on October 14, 1922, I announced that he had accepted the position of editor. Now in looking back over the six months that he has been with the American Agriculturist, I know that the readers have many times and in many ways heartily endorsed my judgment and their approval of the choice of Mr. Eastman.

Birge Kinne became advertising manager in December, and under his forceful, clean leadership, the number of columns of advertising in the American Agriculturist have steadily grown. The fakirs in advertising give Mr. Kinne a wide berth.

We began the New Year by interesting H. E. Babcock, of Ithaca, formerly county agent leader and college professor, now General Manager of the G. L. F. Exchange, to write on livestock, the dairy industry, and cooperative marketing for the coming year. Mr. Babcock's writings have been particularly useful and practical, as they are

By HENRY MORGENTHAU, JR.

based on his experiences on his own farm, coupled with a thorough theoretical grounding.

Dean Cook continues to write his Plow-handle talks and his host of old friends still enjoy his sound philosophy.

Under the careful guidance of Fred Ohm, our Associate Editor, the paper goes to press each week. Notwithstanding the heavy responsibilities which have been placed on his shoulders, he still continues his interest in the boys and girls back on the farm.

The American Agriculturist family has grown under the direction of H. L. Vonderlieth, Circulation Manager, until we have over 120,000 members, and he is so encouraged that he has promised this family will exceed 130,000 by the 1st of September.

Thus the American Agriculturist has surrounded itself with a group of writers who, collectively, are unsurpassed.

Editorially we have fought and helped to get passed legislation of great importance to farmers.

Results Accomplished

In our June 3rd issue, Henry S. Graves, former Chief Forester of the Department of Agriculture, told the inside story of how the Department of Interior was trying to get the Bureau of Forestry transferred from the Department of Agriculture to the Department of Interior. The result of this controversy was that Secretary Fall of the Department of Interior resigned and the Bureau of Forestry remained in the Department of Agriculture where it belongs.

Shoulder to shoulder with other friends of the cow we fought for the passing of the Voight Anti-Filled Milk Bill which became a law under the last Congress.

We were successful with other agencies in advocating that potash should be permitted to enter the United States free from any tariff.

The Editorial Staff consistently cooperated with the Committee of 21 to educate the farmer on the Rural School Bill, and we are now doing everything in our power to assist the Committee in their endeavor to have the new school bill become a law.

Our columns assisted the New York Market Growers' Association in their fight against the City of New York to secure the farmers' market place in New York City.

In the August 26th issue, we pointed out editorially that there would be a great shortage of coal for the coming winter, and that there would be a real opportunity for the farmers in making money out of cord-wood.

In September, we were amongst the first to point out the fact that it would be the world conditions that would control the disposal of the surplus of American agricultural products.

In the October 2nd issue, we announced that President Livingston Farrand had accepted from the American Agriculturist a \$200 scholarship in the winter course at Cornell. It was Raymond Phillips of Victor, N. Y., who won the scholarship.

The American Agriculturist in the November 11th editorial columns, was the first agricultural paper to urge the World's Dairy Congress and National Dairy Show to choose Syracuse as its next home. Members of the staff worked constantly to bring this great exposition to New York and also advocated the building of a Coliseum which was necessary as a part of the plan. We were very happy when Syracuse was finally chosen as the location.

On December 9th, we began our editorial policy of urging continued restrictions on

immigration, which we have constantly pursued up-to-date.

In the latter part of December, we first took up the question of the radio and the farm which was shortly followed on January 13th, by our securing Brainard Foote, whose articles on how to construct various radio receiving sets have proven most valuable to our readers.

In our December 16th issue, we began a series of charts on the production of agriculture in the United States, and showing the fact that in many crops New York State ranks first and that in a total crop production New York State ranks fourth in the United States.

On December 30th, we urged the constructive building program for the College of Agriculture in both New York and Pennsylvania.

On January 13th, the present state of the Country Church, as described by Jared Van Wagenen, Jr., was pointed out to be a grave problem of the countryside to-day.

In the January 20th issue, we urged that the farmers stand by the Dairymen's League.

At the annual meeting of the New York Holstein-Friesian Association, held on January 16th, I spoke on the present delay in compensating the farmer for his condemned cattle under the accredited herd plan, and strongly urged that the State Legislature appropriate sufficiently large sums to pay the farmer promptly. This suggestion has been consistently followed up in our editorial columns. Recently the New York State Legislature has appropriated five million dollars, the largest sum in history for this purpose.

In the March 17th issue, we drew attention through our columns to the country doctor of the old school. The question of the country doctor is a very important one, and we have urged discussion of this question through our columns with the hope that we might possibly help in the solution of this difficult problem.

More recently, we endorsed the plan to hold a great eastern apple exposition and fruit show at the Grand Central Palace, New York City, during the week of November 3-10, 1923.

First To Broadcast Farm News

Broadcasting to the farmers by radio in the North Atlantic States was inaugurated by the American Agriculturist on April 11th in cooperation with the American Telephone & Telegraph Company. The first address was given by E. R. Eastman, our editor, and has been followed with talks by Enos Lee, President of the New York State Federation of Farm Bureaus; John D. Miller, President of the National Milk Producers' Federation and General Counsel for the Dairymen's League Cooperative Association; Mrs. A. E. Brigden, President of the New York Federation Home Bureau; and United States Senator, Dr. Royal S. Copeland, former Health Commissioner of New York City.

In an editorial in the April 21st issue, we endorsed the suggestion of Senator Nathan Straus, Jr., that the New York State Legislature appoint a joint legislative committee to study the marketing conditions this coming summer.

This concludes my report to you, as publisher, of one year's hard work. I sincerely hope that you will approve of it and any suggestions or criticisms that you may have to make will be greatly appreciated by me.

Looking into the future, I assure you that the efforts of the staff, contributors and myself, will be to give you each week a better and more useful magazine than the week before.

Are Tillage Methods Changing?

Due to the Introduction of the Modern Disk and Spring Tooth Harrows

By H. E. COOK

SEPTEMBER 1, 1819, marked the opening of an epoch in farm life; for it was then, Jethro Wood, the originator of the modern iron plow, gave it, perfected, to the world.

From the original crooked stick the evolution had proceeded until Wood's plow laid the foundation for our present highly developed plow construction

H. E. COOK

and adaptability to our many types of soils; plows for stony land, for clay land, for sandy land and for hilly land. I may be within the bounds of truth to say that the introduction of the modern disk and spring tooth harrows has somewhat interfered with a like development in the art of using the

plow. So poorly is much plowing done, that the fields would have been more productive if left untouched. We plow primarily to reduce the sod, stubble and root growth to become decomposed, and to pulverize the soil. The decomposition of organic matter and its mixture with the potential, but not available mineral matter, gives a more fertile soil for the forthcoming crop. Through the decomposition, soil bacteria are also multiplied and chemical forces by the stirring and mixing are set to work.

The ordinary inversion of a sod as seen in fields all around does very little of what we have mentioned. It's not the fault of the plow. It was Professor Roberts, the father of our modern agricultural teaching, who said repeatedly, "hot plowshares, boys, hot plowshares." And he was right if we are out to improve our soils.

Harrows Cannot Replace Plow

Although we have heavy disk harrows that do, if heavily weighted, almost plow the land, they cannot take the place of the good old plow. I have planted potatoes following a plowing because in no other way could the land be made as friable and as fit for the

potato seed. The proverbial onion bed couldn't compare. The surface could have been as finely fitted but hardly deep enough for level culture potato growing.

I am sorry the old fashioned summer fallow has become unpopular. It was here that the plow was at its best. The land was pulverized, not just scratched on the surface, but to a depth of from 6 to 10 inches depending upon the brain power and vision of the farmer and the horsepower attached and what crops followed. Can't our readers of 60 to 70 years remember? But the plan is no longer in style. Of course one can approximate the summer fallow by once plowing in the fall, and twice in the spring, with harrowing enough between to loosen the form of the furrow slice, but most folks won't do it. I suppose for two reasons, it costs money and we don't think we get pay enough out of the crop or produce sold to warrant this extra labor.

Depth Often Neglected

Then again the depth is many times neglected. No doubt we have some hardpan subsoils that ought not to be turned on the surface but sparingly at each plowing. However, I am inclined to think that no one need remain sleepless on this account. The supposed danger often makes a good excuse for not trying it out.

Deep plowing is important. Land plowed deep will hold moisture better than shallow plowed just as a dirt mulch. Two inches deep is better than one inch deep. No argument is needed to demonstrate that 8 inches of finely mixed surface soil will be a better feeding ground for plant roots than when only 6 inches deep, one third more in volume. Isn't it worth while? No extra charge for seed and seeding and for the harvesting.

There is only one place for shallow plowing. If a sod is to be reduced in a short time by the twice plowing system, the first plowing can be around 5 to 6 inches followed by thorough disking and the second plowing two or three inches deeper. The chance to reduce this thin slice by the cultivation given will be more favorable.

Twenty to thirty years ago spring plowing versus fall plowing was a first line subject. To-day we hear very little. Some one said—I think it was Professor Bailey—that the time to trim a tree was when your saw was sharp, and there is a lot of truth in the answer. I am inclined to say the same about plowing for loamy soils. Clay soil must be plowed when just wet enough, and a clay farmer learns when that time is and not from looks either. In the northern sections, and all of New York State can be classified under the north, fall plowing is desirable.

Fall Plowing Essential

On farms where there is any considerable acreage, we are obliged to fall plow or the plowing wouldn't be done. Some years we have plowing weather in the spring, but as a rule we have winter and before we are aware of the change, spring has come and we can begin seeding. Furthermore fall plowed land holds moisture better, for the very obvious reason that capillarity has been thoroughly established. My judgment would be that more will be gained by having the work done than by its increased water supply if we measure differences over a period of years. I am speaking now of the early planted crops.

If land is weedy and filled with quack roots, fall plowing without cultivation or replowing in the spring will make a muss. When one sees the green streaks between the furrows before winter begins and the spring is a late one, may a kind Providence help the owner because he won't get much help from this piece of land. If the owner intends to follow that kind of farming he would be far better off to put on light top dressing of manure in the fall and grow hay. If he could only have a vision and begin a systematic system of plowing and harrowing until every quack root was dead and

converted into plant food then the plow would have become his best servant and friend.

And so I pay my respects to the good old plow that has made the feeding of our millions possible.

The Festering Sore of Civilization

(Continued from page 415)

Government officials, and our entire people. It is a problem of special interest to our farmers both economically and socially.

We here in America can talk about the danger of entangling alliances and the need of keeping out of European affairs, but let us not live in fancied security and think that these 450,000,000 people who have millions of relatives and connections in our country can long be permitted to live on in their present condition or to drift into the still worse condition that is now facing them, without affecting us economically, socially and morally. I do not think that we can become so hardened and indifferent to the welfare of our own kith and kin, to the people from whom we have inherited our language, our laws, our art, our literature and our blood, to remain indifferent to their fate. It only takes a few rotten apples in a barrel in time to destroy all of the good ones. Europe is the infectious and contagious sore spot in the world's civilization to-day.

No man nor nation can either create, control or command general forces and natural laws that always determine the collective and individual prosperity of a country. It is fraught with great danger to any man to possess the conceit that he is sufficient unto himself, and this is not only true of individuals, but in this modern age, it is true also of nations. Times have changed within a hundred years. Rapid transportation and inventions in fast communication have brought the world nearer together physically and made it a comparatively small place. If it were possible years ago to declare and maintain an attitude of isolation, the rapid progress of invention has made that policy physically impossible now.

As to the actual method of how we shall work with the European nations to straighten out the chaos, it matters not so long as the method be effective and so long as it does not injure our own nation. An attempt was made following the war to lift the poor old world of ours to a higher plane. Those who led that attempt thought that the terrors of the war had taught the folly of settling international disputes by force. It was hoped to supersede the rule of might by the reign of justice. Because this effort failed is one reason why the chaos still exists in Europe. No set of men and no individuals are to blame for failure. It was simply that the entire world was not yet ready to abandon rivalry and suppress hatred.

I have always felt that any man or woman who is endowed with superior intellectual powers should voluntarily and freely use some part of them for the benefit of the entire community. Why does not the same logic apply to the nations? Our country at present is possessed of greater reservations and resources than any other. Our country is the only one that has been untouched by the destructive flood that has resulted from the war. We have been spared. We have in an orderly manner and without serious disturbances again adjusted ourselves to non-war conditions. Has not the time come for us to lend a helping hand to those who are still submerged by the flood?

This does not mean that we should run the risk of drowning ourselves. As I have tried to point out, we are running a greater risk by doing nothing. In rendering help we can do so with such precaution that we will not in the least possible way expose ourselves to being engulfed. We have listened all of our lives to preachings that all men are brothers. Is all of this talk preaching and theory only, or are we willing to demonstrate our sincerity by actual practice of the greatest of all principles, human brotherhood?

Nitrogen, Organic or Mineral?

A Review of the New Jersey Experiments

THE common assumption that the organic sources of nitrogen in fertilizers have a more permanent and lasting effect upon the average soil than the mineral sources, such as nitrate of soda or sulfate of ammonia, is not borne out by the results of experiments at the New Jersey Agricultural Experiment Station.

The influence of nitrogen from mineral and from organic sources upon yield, and the relative proportions of these two forms that are "recovered" from the soil by assimilation

eliminate other influences each cylinder received annually an adequate supply of acid phosphate, muriate of potash, sulfate of potash and ground limestone. So far as it was possible to control conditions, then, the only differences between the cylinders was in the proportion of sand in the soil and the sources of nitrogen.

Averaging all results, nitrate of soda gave a higher average yield than dried blood—132.6 grams per cylinder to 120 for the latter. Not only this, but the percentage of nitrogen recovered also

ation into the plant tissues, have been studied at this station a number of years. Recently a 10-year experiment was brought to a close which revealed some interesting contrasts between the two types of nitrogenous fertilizer.

The object of the study, which was begun in 1911, was to determine the relationship of these two sources of nitrogen with special reference to the mechanical composition of the soil. For this purpose 60 metal cylinders, about two feet in diameter and four feet deep, were sunk into the ground so that only about 4 inches of one end projected above the surface. They were arranged in 10 series of 6 each, the soil of the different series varying from a heavy loam to pure sand. That is, the first series contained 100 per cent heavy loam (no sand), the second, 10 per cent sand, the third,

was larger, 52.7 per cent for the nitrate to 44.4 for the dried blood.

Considering alone the second crop of the season, buckwheat, the average yields of dry matter were actually greater with dried blood than with nitrate of soda, but in both cases they were more than from the check cylinders. The larger yields from the dried blood indicate a greater residual effect from this than from the nitrate, which is reflected also in the percentage of nitrogen recovered—an average of 10 per cent for the dried blood as compared with 3.96 for the nitrate of soda. This difference, however, is not sufficient to offset the much greater recovery of nitrate of soda in the first crop; so that when the two crops are considered together, nitrate of soda outranks the dried blood.

Comparing next the series of cylin-

* From the Annual Report of the New Jersey Agricultural Experiment Station for 1921.

20 per cent, and so on, up to 100 per cent sand. Within each series, two cylinders (the checks) received no nitrogen, two were treated with dried blood, representing organic nitrogen, and two with nitrate of soda, the mineral source. Each cylinder of both sets received sufficient of the respective materials to furnish an exactly equivalent amount of nitrogen—12 grams of the dried blood (about 2-5 ounce) and 10 grams of the nitrate of soda (about 1-3 ounce).

Two crops were grown each year, barley followed by buckwheat. The fertilizer was applied every year, always on the first crop. In order to

ders which contained varying proportions of sand, some more interesting facts are revealed. The 10 per cent sand mixture gave the highest yields, on the average, though not the highest recovery. The yields did not vary greatly up to 50 per cent sand, but showed a more marked falling off with the increasing sand proportions in the case of dried blood and of the checks than occurred in the nitrate of soda cylinders. Of special interest is the fact that the yields from the 40 and 50 per cent sand mixtures are almost as large as the yields from the loam soil, although the percentage of nitrogen in (Continued on page 422)

Average Potato Crop in 1923

New York Reports Dangerous Increase in Cabbage

THE Empire State Potato Growers' Cooperative Association with headquarters at Rochester, N. Y., has been conducting a survey of New York State with reference to the proposed planting of potatoes and cabbage for 1923. Upwards of 800 replies were received from potato growers in New York who report only a slight decrease in acreage proposed this year. Compared to last year—approximately only 3½ per cent. "In other words," writes L. J. Steele, manager of the cooperative, "present indications point to a normal planting of potatoes in New York this season."

According to the report of Mr. Steele, in which he summarized the survey, on April 1, the potato growers of the United States expect to plant 91 per cent of last year's potato acreage which was 9 per cent above the 5 year average. In other words potato growers of the country contemplate planting a normal acreage in spite of the fact that last year's crop brought ruinously low prices. As a part of his report, Mr. Steele included an analysis of the causes of the rather sudden advance of potatoes in March and April when last fall and winter all indications pointed to a lower price this spring. Mr. Steele gives the following factors that were responsible for the sharp advance:

The unusually severe spring frosts which not only delayed but severely damaged the early southern potato crop. Prior to April 15, Florida had shipped only one-tenth as many cars compared to the same period last year.

Thousands of Bushels Undug

Shrinkage had its effect upon prices. There was excessive rotting and severe frost losses in storage and transit. When prices took such a sudden drop last fall, thousands upon thousands of bushels of potatoes rotted in the ground because it didn't pay to dig them and haul them to market.

Speculative buying was increased due to the fact that potato supplies in the East had been supposedly cleaned up earlier than usual, leaving many buyers to believe that there was going to be a shrinkage. This boosted the price for a time to a higher level than remaining supplies really warranted, primarily to lack of knowledge of stock on hand.

Cabbage Situation is Dangerous

In addition to handling potatoes, the Empire State Cooperative handles cabbage, which also was the subject of a survey. The cabbage situation is vastly different from the potato situation and a great deal more serious. Something like 300 cabbage growers in New York replied to Mr. Steele's questionnaire, signifying that they expected to increase their acreage on an average of approximately 30 per cent over last year.

This increase is dangerous. In view of the fact that the acreage of New York last year was larger than normal and the yield was better than average, resulting in a heavy crop, taking the State as a whole. In fact the crop was so large that thousands of tons were never harvested and thousands of tons were fed to livestock.

According to Mr. Steele, if New York cabbage growers plant 31 per cent increased acreage, and the season turns out to be a normal cabbage season, New York should have about 21,000 cars of cabbage to market compared with a normal production of about 12,000 cars. If the season of 1923 turns

out to be as good a cabbage season as last year, it would mean a crop of over 23,000 cars, approximately double the average number which the State usually produces.

Latest information received from Michigan, indicates about the same as last year's big acreage, which was the biggest crop that State has ever produced.

In concluding his report on the early season situation, Mr. Steele emphasized the fact that the

proposed acreage figures are what farmers expect to do on April 1. However, spring is very backward, farm labor is scarce and most farmers expect to do a little more than they can actually accomplish. In commenting on the cabbage outlook, he calls attention to the fact that growers should not let the high prices of February and early March influence their planting of this season.

The Florida and Texas crop were the smallest and poorest in many years. Had the southern crop been normal there is

no question but what northern cabbage would have been a drug on the market during February and March.

AMONG THE FARMERS ALONG THE SOUTHERN TIER

The maple sugar crop was scarcely half as much as usual. Farmers attribute the shortage to lack of frost in the ground. Such a heavy body of snow lay on the earth in the woods that frost did not go down very deep. At the Endicott-Johnson markets, syrup sold for \$2.75 a gallon and sugar for 35 cents. Many sugar bushes were not tapped at all. Those who were compelled to hire help paid 30 cents an hour.

Indications are that about the usual acreage of potatoes will be put in in the Southern Tier. It takes more than one year of low prices to scare our farmers out. Seed potatoes are bringing about \$1.25 a bushel.

Our farmers are showing more interest in sheep. The better price wool has been commanding and the outlook for more efficient cooperative marketing has a good deal to do with this. Some are hesitating about buying sheep because of dogs. My remedy is for every man to invest in some sheep. Then the dog problem will solve itself. —E. L. V.

TOO MUCH CABBAGE

A QUESTIONNAIRE sent out by the Empire State Potato Growers' Cooperative Association to some three hundred cabbage growers in New York State indicates that the growers are planning an approximate 31 per cent increase in acreage over last year. This is an extremely dangerous situation to which every prospective grower should give careful consideration.

Last year's yield was better than the average. Thousands of tons were never harvested, and thousands more were fed to livestock. As Mr. Steele, manager of the cooperative, so clearly points out in the article on this page, if there is a 31 per cent increased acreage and a normal cabbage season, New York State would grow 21,000 cars of cabbage, or nearly double the normal yield. There can be but one result of such great overproduction, and that is heavy loss for everybody concerned.—The Editors.

Open to you— Real sales opportunity

Even with no previous sales experience, you can make good money selling R. H. Co. Lightning Rods.

These "Rods of a Better Kind" have been giving perfect lightning protection for 74 years, and bear the official approval of the U. S. Department of Agriculture and the Underwriters' Laboratories.

New Way to Rid Poultry of Lice

Rev. G. R. Mente Tells of Amazing Discovery Which Keeps Hens and Chicks Free From All Vermin

"I have used your remarkable Lice and Mite Remedy with fine results," writes Rev. G. R. Mente, Methodist Parsonage, New Washington, Ohio. "It has put a stop to the poultry losses in this community. You are a great benefactor to poultry raisers."

Lice and Mites Go Like Magic

This amazing new discovery is Imperial Lice and Mite Remedy. Comes in condensed liquid form, to be used in fowls' drinking water, a few drops at a time. No more Dusting, Spraying or Greasing.

Makes Lice, Mites, Ticks, Fleas, Blue Bugs and other vermin positively leave fowls like magic. Renders entire flock, old and young, immune to these expensive pests. Equally good for Chickens, Ducks, Turkeys, Geese and Pigeons. Guaranteed not to affect eggs or flesh of fowls in any way. Makes Hens, Pullets and Chicks healthier, sturdier and grow faster. A splendid summer egg tonic and blood purifier. More than 100,000 Poultry Raisers now keeping their flocks free from vermin, this new easy way.

No Wonder She Doesn't Lay or Set

You Can Get Yours Free (Regular \$1.00 Size Bottle)

Imperial Laboratories, the manufacturers, are now making a Special Introductory Offer whereby you can obtain, absolutely free, a season's supply, for the average size flock, of this amazing new Lice and Mite Remedy.

SEND NO MONEY. Just your name and address to Imperial Laboratories, Dept. 7589, Kansas City, Mo., and they will send you by return mail, two regular \$1.00 bottles of Imperial Lice and Mite Remedy (double strength). When the package containing the regular \$2.00 quantity arrives, pay the postman only \$1.00 and a few cents postage. Use one yourself to rid your own flock of these pests, and sell the other to a neighbor—thus getting yours free. Or, a large size Trial Bottle for only 50c.

If you have a large flock, or have neighbors who wish to go in with you, this Special Introductory Offer applies on 4 of the regular \$1.00 size bottles, at an additional saving. A large size Trial Package of Imperial White Diarrhea Tablets, Included Free. Just state you want the regular \$1.00 quantity, for only \$1.75. Readers risk no money, as Imperial Laboratories are fully responsible and nationally known distributors of poultry remedies. They will refund the cost on any of the above quantities ordered, promptly on request, any time within 30 days.

Sugar Prices Hit Berries

New Jersey Growers Hard Hit If Prices Keep Up

STRAWBERRY growers throughout Central and Southern New Jersey are watching the sugar market more closely than crop prospects, in view of a generous crop of berries in sight and of the widely discussed consumers' boycotts against high prices for sugar. Rhubarb which is now being cut in quantity has already felt the effect of the consumer reaction to sugar prices. Peaches which will begin to go upon the markets from this State in early July will also feel the effects unless the sugar situation clears up meanwhile. Publicity and advertising to show that such food products as strawberries, rhubarb and peaches can be used without large quantities of sugar are already being discussed by the growers.

The Federal quarantine on the Japanese beetle, affecting the Burlington and Camden County areas of New Jersey and territory along the Delaware River in Eastern Pennsylvania, has now been modified so that products for immediate consumption from the farms in this section will have free movement into the Philadelphia area. This zoning system was provided to meet the need of farmers local to Philadelphia for an easier distribution for their crops. The new plan allows the movement of locally produced food products, but prevents the spread of the beetle to new areas by the exportation of farm products to points outside of the free area only under rigid inspection.

The Agricultural Contest Committee of Somerset County, N. J., has enrolled a large number of boys and girls in the contests which began in the county on May 1. The contest club work centers around the raising of calves, corn, chickens and vegetables and home economics.

Dr. W. H. Whiton is Chairman of the Committee working closely with H. C. Krebs, Superintendent of Schools, the Y. M. C. A., and the women's clubs of the county. The contest work is supported entirely on private funds. Even the county Holstein Association, the Granges and the New Jersey Guernsey Breeders' Association actively support the club work.

Following the very successful beekeepers' courses at the New Jersey State College of Agriculture in February and March, a second unit in these short courses is announced for the week of June 4 to 9. The courses are practical rather than theoretical and the instruction and laboratory work will be held in the apiary on the College Farm.

Those attending the courses learn from the experts at the college about the control of swarming, the handling of bees and summer management, which are topics uppermost in the minds of beekeepers in early June.

Although many cannery tomato growers are sitting tight and waiting further development on the cannery situation in Southwestern New Jersey, reports of \$15 per ton on the farm or \$18 delivered at the factory are heard as contract prices this year. Some growers claim to have made contracts

around these figures although many are insistent for a quotation of at least \$20 at the factory.—W. H. BULLOCK.

PENNSYLVANIA GETS BEHIND STANDARD HAY GRADES

The move for standardization of market hay grades which has been advocated in a number of Eastern States is rapidly gaining ground in Pennsylvania, which markets outside of the State several thousand cars of which the New York City market alone absorbs more than 6,000. A recent investigation by the State shows that much of this market hay is graded low because it contains foreign material and an excessive amount of brown leaf surface. More careful grading which would bring more of the hay into the best grade, would not only increase the net return to the farmer, but it would relieve somewhat the surplus in second, third, and fourth grades which make up the bulk of hay offered.

The U. S. standard hay grades as adopted on the New York market are being very generally advocated and the following requirement for U. S. No. 1 timothy is being called to the attention of Pennsylvania growers: "Shall be cut not later than when in full bloom and may contain not more than 4 per cent of brown leaf surface, 2 per cent of brown or bleached heads and 5 per cent of bleached or off-colored stems. To be designated as Choice, No. 1 timothy, must have not more than 5 per cent brown leaf surface and no brown, bleached or discolored heads or stems."

Change in State Dog Law

Following an amendment to the Pennsylvania dog law at the current session of the State Legislature, the duty of appraisal of damage done by dogs goes back to local officials instead of resting in the personnel of the State Bureau of Animal Industry. Adjustment is now being made throughout the State in accord with these new provisions. If faithfully carried out the changes should be beneficial since the Bureau officials can confine themselves to the administration of the law and to the tightening up of loose enforcement in important counties.

Despite the existence of the dog law the number of the flocks in Pennsylvania has shown a decline within the last year and this in spite of the fact that prices of sheep and wool are considerably better than a year ago. Assistance is being given to local organizations and to live stock and poultry owners in protecting property against attacks of dogs.

More Steers Fed this Year

Steer feeding has been on the upgrade in Pennsylvania during the last year and data just available shows that 2 per cent more of the farmers of the State fattened steers this last winter, than in the previous season. Lancaster County comes first where over 50 per cent of the farmers fed steers this year. The counties of Adams, Perry, York and Dauphin have steers on a large per cent of farms; the State average shows that 7 per cent of the farmers are feeding steers.—W. H. B.

UNADILLA SILOS

Easy to Use

A Silo is in use twice daily for 6 or 7 months. Convenience and labor and time saving is important. In a Unadilla, silage is shoved out at the door level. Gravity carries it "like water over a dam". The air and water-tight doors cannot stick. There is, therefore, no pitching of tons of silage overhead. The door fasteners form a permanent safety ladder—convenient, secure.

Write today for big, new illustrated catalog which shows Unadilla features of convenience not found in any other silo. Get our special early order discount offer.

specialists at the colleges
of agriculture in the
territory served by the
Cooperative Grange League
Federation have approved
the formulas of G.L.F. Rations.

Practical Poultrymen
using the rations the year around
report excellent results.

Feed G.L.F. Rations and
you will know just what your
birds are eating.

See your G.L.F. Agent or write
for booklet of formulas.

The Coop. G.L.F. Exchange, Inc.
Syracuse, New York

Five Distinctive Features:

1. G.L.F. Poultry rations contain a larger variety of ingredients than is usually available in your locality.
2. The quality of the ingredients and the pounds of each are stated.
3. The digestible nutrients in each ration are high and the fibre content is low.
4. Dried buttermilk and dried skimmed milk are used and the animal proteins are high.
5. Accurately operated mechanical mixtures make a thoroughly mixed and uniform ration.

4 TIMES Around the World with ONE OILING 100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The Auto-oiled Aermotor after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting windmill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

\$500 TRAVEL AND FARM SERVICE ACCIDENT INSURANCE POLICY

YOURS as a Gift for only 2 yearly subscriptions for AMERICAN AGRICULTURIST at \$1.00. Your own renewal may be sent as one of the two subscriptions required.

This policy will give you financial protection for a full year against death or injury from accidents under the conditions set forth below.

THIS TELLS WHAT THE POLICY WILL PAY YOU

If the Insured shall, by the wrecking or disablement of any railroad passenger car or passenger steamship or steamboat, in which the Insured is traveling as a fare-paying passenger; or, by the wrecking or disablement of any public omnibus, street railway, taxicab, or automobile stage, which is being driven or operated at the time of such wrecking or disablement, by licensed driver plying for public hire, and in which the Insured is traveling as a fare-paying passenger; or by the wrecking or disablement of a private horse-drawn vehicle or motor-driven car in which the Insured is riding or driving, or, being accidentally thrown from any such vehicle or car; or, if the Insured shall, while actually engaged in farming, by actual contact with and while operating a threshing, mowing, reaping, or binding machine, harrow, drag, or plow tractor, hay rake, hay loader, cultivator, corn shredder, silo filler, pulverizer, corn planter, seeder, roller, hay or straw baler, or as a result of handling live stock while on the farm, suffer any of the specific losses set forth below in this Part, The North American Accident Insurance Company, Chicago, Ill.

—WILL PAY THE SUM SET OPPOSITE SUCH LOSS FOR LOSS OF—

Life.....	Five Hundred Dollars (\$500.00)
Both Hands.....	Five Hundred Dollars (\$500.00)
Both Feet.....	Five Hundred Dollars (\$500.00)
Sight of Both Eyes.....	Five Hundred Dollars (\$500.00)
One Hand and One Foot.....	Five Hundred Dollars (\$500.00)
One Hand and Sight of One Eye.....	Five Hundred Dollars (\$500.00)
One Foot and Sight of One Eye.....	Five Hundred Dollars (\$500.00)
Either Hand.....	Two Hundred Fifty Dollars (\$250.00)
Either Foot.....	Two Hundred Fifty Dollars (\$250.00)
Sight of Either Eye.....	Two Hundred Fifty Dollars (\$250.00)

Indemnity for loss of life as above set forth shall be payable to the Estate of the Insured.

The above indemnities will be paid, subject to the provisions and conditions of the policy. A complete numbered and registered Policy will be mailed each person insured. Be sure to read it before filing away.

SEND ONLY TWO YEARLY SUBSCRIPTIONS

at \$1.00 each or one two-year subscription at \$2.00 and you will receive one of these valuable \$500.00 Travel and Farm Service Accident Policies free, postpaid. Be sure to mention your age. Policies will be issued to any man or woman over 16 and not over 70. Address

Too Few Nests

One of the Reasons for Hens Becoming Egg-Eaters

SOME time ago I visited the poultry farm of an acquaintance of mine. This consists of half a dozen buildings; the larger ones of which are divided into compartments. The old hens are in pens by themselves, as are also the laying pullets. Those that have not yet reached the laying age are in another building and then there is also a place for the breeders, roosters and hens.

I could see at a glance that everything was in first class order. The floor was covered with clean litter into which every grain of feed was thrown, thereby making the hens scratch; there was a finely balanced dry mash in the hoppers, there was grit, shells, charcoal, each at its proper place and there was good fresh water in the different fountains. In short, there was nothing that I could have done better or improved by rearrangements or changes. While I was taking note of the various equipment and their contents, I had been watching sharply for nests. Not a single one could I see. Finally, for I knew they were laying quite well at the time, I was forced to ask: "Where are the nests? I know they are laying and yet there are no nests in the buildings?"

Then even just as the owner was starting to point them out to me I perceived them hidden cunningly under the roosts. This in itself was good, if only the number had been doubled. How much better it would have been. I started to count the nests. There were a dozen, yes, about a dozen to a pen, this makes about six dozen nests in all for about 600 hens.

Few Nests Well Patronized

Then we went and lifted the board which hid the nests and I saw that most of the eggs were laid in a few nests. In each pen I found the same condition. The eggs were laid in a few of the nests. Seeing a china nest egg, I asked "Have you nest eggs." "Yes, for some of the nests," he answered. Most of the nests were not made as I would have made them. The hay was not padded and smoothed in the beautiful, cozy and inviting fashion which a hen likes and which makes her gurgles and nestle and snuggle with satisfaction. Other nests did not have enough hay, some was so fine in a few that it invited scratching on the part of inquisitive young pullets. Many others were almost bare.

After I reached my home I thought a long time about what I had seen. The chickens, as a breed, were all that could be desired, for they were all bred after the most up-to-date methods of selection and breeding, the equipment was of the very finest, the attention was all that could be desired and yet these beautiful White Leghorns had the reputation all during last winter of being egg eaters. At least I blamed this bad habit on the small number of nests, on the bad condition of most of them and on the few nest eggs.

When the Pullet Starts

When a pullet feels the time approaching for the laying of her first egg, she spends part of the preceding day, or two of them, in investigation. We commonly say "She's hunting a nest." I need not go into details about this, for everybody has seen it. It is a very pretty and pleasing sight. Then, she always wants to and expects to lay in this nest, her first love, every time.

How indignantly she looks and eyes her nest when she comes the next day to lay her egg if she finds it occupied by one or two or more of her sisters. She, if she is timid, will patiently wait her turn, but if she is of a pugnacious disposition she will try to forcibly take possession of her property. Many times a nest is filled with as many hens as can find a hold to cling thereto. All this results in crowding, suffocation, fighting—broken eggs in the nest and out because eggs laid in a crowded nest often fall outside and are broken. It also results in egg suppression. This is not good for the hen and causes fewer eggs or it causes the egg to be deposited on the floor or in a strange nest which also affects the hen badly.

If nest eggs are being used, see that every nest has one. If some nests are made beautiful and inviting, make all nests that way. If the material has become fine in some nests, remove it and replace it with some of the right kind. Then and only then will each nest stand an equal chance of being used and being the repository of the things we like to find. Let there be enough nests. Even if the nests are so small—only large enough for a hen to turn around in it—as they can possibly be, there will always be room enough for one or two others to try and crowd in. Let nothing worry or excite the hen or stay the singing of her laying song and there will be no losses caused by suppression, by broken eggs or egg eaters.

Nitrogen—Organic or Mineral?

(Continued from page 419)

the former was only about half as much as in the latter.

The highest percentage of nitrogen recovered from the nitrate cylinders was from the 40 per cent sand mixture, 62.05 per cent nitrogen. In the case of dried blood it was the 20 per cent sand mixture, returning 47.65 per cent of the nitrogen. The lowest recovery for both sources was in the 100 pure sand cylinder—25.49 per cent for nitrate and 36.41 for dried blood.

The yield of dry matter in all series but 100 per cent sand was greater from the nitrate-treated cylinders than from those which received the dried blood. Likewise, nitrate surpassed dried blood in the proportion of nitrogen recovered up to the same point with the exception of the 80 per cent sand, where the latter has a very slight, practically negligible, advantage.

Plants Took Up More Nitrogen From Nitrate of Soda

It is significant that nitrate of soda showed an average annual recovery of 47 per cent in the 80 and 90 per cent sand mixtures, and that for the 90 per cent sand mixture it exceeds dried blood by 5 per cent. It suggests that even in quite sandy soil the nitrate may be used to as good advantage as the organic sources of nitrogen if crops are kept on the land to utilize the nitrogen fully.

The danger of loss of nitrate of soda through leaching, therefore, does not appear to be so great as is commonly believed. Its great advantage seems to lie in its easy availability, and consequently the quick start which it gives the plant.

In reporting the results of the experiment, Dr. J. G. Lipman and Prof. A. W. Blair, under whose direction the work has been carried out, say:

"The reason for the superiority of the nitrate over the blood seems to be its ability to give the plant a good start during its early growth. With such a start it is able better to utilize soil moisture and the natural plant-food of the soil than the plant which, on account of having a slowly available source of nitrogen, gets a slow start. This interpretation seems to be borne out by the fact that in some cases the check cylinders gave a larger residual crop than the nitrate cylinders.

"It has been quite common to regard the organic sources of nitrogen as having a more permanent and lasting effect than the mineral sources, the latter having been regarded as subject to rather rapid loss through leaching. The results of this experiment do not bear out this idea, except in the case of soils which are almost pure sand. It would appear that the young growing plant rapidly utilizes the nitrogen of soluble nitrates and thus forges ahead of the plant which is depending upon sources not so readily available. It is possible that during the transformations of the nitrogen of these slowly available materials into soluble forms there is considerable loss."

*From the Annual Report of the New Jersey Agricultural Experiment Station, for 1921.

Abortion—A Warning

A Disease That Is Universally Prevalent

I KNOW several owners of pure-bred herds who declare they have never had abortion in their herds. When they lose a calf, the cow "must have slipped on the ice." Why try to "kid" oneself and the public?

We recently sold a man five pure-bred Guernsey cows. While we were making the deal we told him the breeding record of each cow and figured out for him the percentage of abortion losses which our experience taught us he might expect. We did this because after we had once sold a novice a few cows he had some abortion and a prominent breeder proceeded to tell him what crooks we were.

Abortion is almost universally prevalent, I am convinced, I believe in accepting this condition as a fact with which dairymen, and particularly pure-bred breeders, have to deal.

Accepted as such, abortion loses much of its terror, and becomes an economic factor which adds to the expense of producing cattle and milk. We should deal with it in terms of percentages and make calculations accordingly.

Personally, my observations lead me to place no confidence in the advertisement of the man who advertises, "no abortion," and to extend little encouragement to the man who writes for animals out of herds "free from abortion." The sooner the real truth is out and met, the better.

Meanwhile the beginner in pure breeds had better definitely recognize and face the abortion risk.

The editor's request for an article on abortion prompted these few paragraphs. But I cannot write an article. I never read a good one. The best authority I know is a good veterinarian, and he is none too good for the job at hand. May science make him better, and teach us all. In the meantime, the less laymen say about abortion control, the better.

* * *

TWO DOLLARS OR SIXTEEN?

RECENTLY I reported in the American Agriculturist upon our experience in removing the pure-bred Guernsey cow, Lady Rilma, on A. R. test, from a box stall to her old accustomed place in the stanchion row. The figures which I gave at that time showed that this cow gained slightly after the change. Of course, this gain may have been due to other facts than the shift to the stanchion row; on the other hand, the production figures quite clearly indicate that the cow did not suffer from the change. Meanwhile the time consumed in taking care of her was cut down very materially.

This experience, together with the growing demand for labor outdoors, led us to decide recently to take all of our other test cows out of box stalls and put them in stanchions.

Buy or Build?

There were, however, no stanchions available in the barn in which we wished to keep the cows, and it therefore became necessary to put some in. As the barn is equipped with patented steel stalls, we naturally went to our local dealer to find out what similar stalls would cost. As I recall it, the kind of stall we wanted figured something over \$16. This cost was prohibitive, yet we wanted as comfortable a stall as possible, and so hesitated to go back to the old-fashioned rigid wooden stanchions.

In the emergency, my partner remembered a stall he had seen somewhere, which seemed to him to fill all our requirements. He built similar stalls, and we are so well satisfied with them that I am passing on the general instructions for what they are worth.

To construct them he set up 2x4's, the same as they would be were they uprights in the old-fashioned wooden stanchions. These 2x4's were set about 2½ feet apart, and along the inner side of each a steel rod was offset 2 or 3 inches. These steel rods came down within about 6 inches of the stanchion curb, and ran up about to the height of an ordinary cow's withers. On each rod was strung a short piece of chain. These two pieces of chain

By H. E. BABCOCK

were then joined in the ring of a big snap. Each cow was provided with a leather collar with a big ring in it.

When the cows come into the barn they walk up and stick their heads between the 2x4's and the snap is snapped into the ring on the collar. The pieces of chain slide freely up and down on the steel rods, permitting the cow the utmost freedom, but they form a barrier which prevents her stepping into the manger. She can, however, by pulling back throw her head around and lick herself, and in fact have all of the freedom possible in the finest sort of a steel stall.

The rods, collars, and snaps cost slightly in excess of \$2 per cow. We have just as comfortable—if not as slightly—a stall as the one for which the dealer wanted \$16, and we are \$14 per cow to the good.

* * *

DRAGGING ALFALFA

IN growing alfalfa the worst thing we have to contend with is smothering. New seeding put in with grains kills out completely whenever the grain lodges; cocks of alfalfa left too long on the ground kill out the plants under them; big snow banks do the same.

Worst of all, however, is the smothering that comes from the gradual encroachment of a grass sod. If we could control this I am certain that we would never need to plow up our alfalfa fields. There are places on our farm so stony that grass cannot grow there; three or four cuttings of alfalfa have been produced on these places each year for the past twenty years. Our trouble in holding a stand is not in these gravelly places, but in the more fertile soil.

Last year we plowed up eight acres of Grimm alfalfa; it took four big horses on a sulky plow to do the job. The plowing was done in the fall and we did not get to work on the piece until late the next spring. By that time there was practically as good a stand of alfalfa as though the field had never been plowed. In fact there was so much of it that we abandoned an attempt to control it and plant corn on the field as we had originally intended.

This experience with true Grimm alfalfa convinced me of its toughness; accordingly, this spring when I discovered that one of our best alfalfa fields was pretty well sodded over with grass I decided to give it a good dragging.

I had a big team and set a spring-tooth drag down to the last notch. Halfway across on my first bout I stopped and looked back. The demonstration was so awful that thereafter I kept my eyes on my team. Some spots I went over twice. Fortunately darkness came on and obliterated my handiwork, and the next morning I left home for a three-days trip.

When I returned I found on the dragged portion of the field scarcely a blade of grass showing green, but the alfalfa crowns stood up clean and thrifty. Apparently dragging did the work. I hope so, anyway, for I know that if I can keep out the grass my fields of Grimm alfalfa will last me my lifetime. This means less and less money for fertilizer and grass seed and less laborious plowing and dragging to reseed meadows.

If You are Milking 10 or More Cows By Hand You Are Paying For a De Laval Milker

10% DOWN
6% a month

There are now more than 10,000 De Laval Milkers in use, and their owners are almost unanimous in their agreement that the De Laval is better, faster, cleaner and cheaper than any other method of milking. With a herd of 10 or more cows a De Laval Milker will soon pay for itself in the saving of time and labor, increased milk production which its uniform and stimulating action usually brings, and through the cleaner and improved quality of the milk.

You can buy a De Laval Milker on any terms you desire—for cash, on time, or on installments.

For 10% down you can start using a De Laval Milker, and 6% a month for 15 months pays for it.

On such extremely liberal terms you can get the use of a De Laval while it actually pays for itself. In many cases the saving in labor alone will more than meet the monthly installments as they come due.

Ask your De Laval Agent for complete information or write us now. Get your De Laval in now before your rush season, so that you will receive its full benefit when you need it most.

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week.

Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest.

We positively guarantee to our readers fair and honest treatment in dealing with our advertisers.

We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised.

To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

BRED TO LAY—Day-old chicks, S. C. White Leghorns: May, \$15 per 100; June, \$12 per 100. Barred Rocks, Reds, White Wyandottes: May, \$18 per 100; June, \$14 per 100. Eggs at \$5 per 100. STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of American Agriculturist published weekly at 416 W. 13th St., New York, N. Y., for April 1, 1923.

State of New York, County of New York, ss.

Before me, a notary public in and for the State and county aforesaid, personally appeared Henry Morgenthau, Jr., who, having been duly sworn according to law, deposes and says that he is the president of American Agriculturist, Inc., and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and address of the publisher, editor, managing editor and business managers are:

Publisher, American Agriculturist, Inc., New York, N. Y.; Editor, E. R. Eastman, 1503 Miller St., Utica, N. Y.; Managing Editor, None; Business Manager, Henry Morgenthau, Jr., New York, N. Y.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and address of stockholders owning or holding 1 per cent or more of the total amount of stock.) American Agriculturist, Inc., New York, N. Y.; Henry Morgenthau, Jr., Hopewell Junction, N. Y.; Henry Morgenthau, New York, N. Y.; Elinor F. Morgenthau, Hopewell Junction, N. Y.; E. R. Eastman, Utica, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is..... (This information is required from daily publications only.)

Henry Morgenthau, Jr., President.

Sworn to and subscribed before me this 2nd day of April, 1923.
(Seal) Elsie B. Ganz (Weiss).
(My commission expires March, 1925.)

"ALL IN A LIFE-TIME"

By Henry Morgenthau

Contains his vivid memoirs of:

A German Childhood; emigration to America.

A New York boyhood; at the Fifty-first Street School; law at City College.

Feelers in Real Estate; great days in Wall Street; historic episodes in finance.

The Public Ledger—

Making Wilson President.

Ambassadorship to Turkey during the war.

Special Mission to Poland.

World Affairs in New York.

The reasons for his startling exposé of the fallacies of Zionism.

"He tells of all these things in an entertaining narrative, written in a simple and colloquial manner, with an adequate appreciation of the importance of what he did. His book is a valuable contribution to the history of the period which it covers."

Some Service Bureau Cases Are Long Time Affairs

WE have all heard of the famous law cases which drag along year in and year out until they become so involved that no living person can tell how they ever began, much less try to bring them to an end!

We really thought that the case of Mr. J. L. K. vs. a New York commission house, would outlast this generation and go on to the next. But a few days ago, the last letter came in and the clerk wrote closed across the folder when we filed it away.

Yet the whole matter was the sort that is nobody's fault and that everybody wants to straighten out. Fortunately, no tempers were lost, there was patience enough to go 'round and in the end everybody was happy including the Service Bureau, which played the part of the untangler of the puzzle.

An Old Story

It happened this way: Last Spring, over a year ago, an A. A. subscriber, shipped a case of eggs. He had shipped cases often to the New York house; so had his neighbors and relatives and no one had had any trouble. He sent other shipments before and after. The other shipments were paid for, but not that particular one. He complained to the company. The company answered politely but firmly that the case had been paid for. After about the fifth letter, the company decided that the wrong person must have received the check.

About this time, the Service Bureau took a hand. We asked for express receipts and found the case had been signed for. But still the company said their records were clear and evidently honestly felt that they had no responsibility. They, however, made a suggestion. In the same town lives a man with the same last name. One initial is also the same. He ships eggs to the same company.

A clue! We were off like Sherlock Holmes after it. But we were disappointed. The other Mr. K. produced checks, receipts and other proof to show he had been paid for cases he shipped but no more. After spending several weeks, in fact months, in correspondence, we were back where we started.

Then we tackled the express company. They were sure they had made no mistake. But like both Mr. K. and the company, they were willing to have their records examined and to answer questions patiently.

One Grand Mixup

To make a long story short, we gathered up proof here and there—our subscriber's story, the other Mr. K's receipts and statements, the express company's delivery sheets and the records of the New York commission house. Throughout it all we were convinced that it was simply a natural mix-up, with no intention to defraud anywhere and the results proved our belief.

The extra shipment was traced, signatures were compared and the mistaken credit corrected. Mr. K. received his check, the commission house thanked us for aiding them in solving the complications, and our subscriber, too, wrote that he gave us all the credit for making the adjustment and that he fully appreciated the trouble it had involved.

It was a case of "all's well that ends well", and as a matter of fact after it was closed and the letters filed away, we rather missed our old friend!

CHECKS LOST IN THE MAIL

Mr. J. O. B. of Pennsylvania lives some distance from his bank, and consequently mails checks for deposit. In August, 1921, he sent six checks in this manner, the money representing remittances from three different firms. The checks were lost in the mail between his post office and the bank. Two of the firms made no trouble in sending duplicates, but from one of them, a New York produce house, he never received any answer or attention.

Although the complaint had dragged along for two years, we undertook to obtain duplicates for Mr. B., and took

up the matter with the New York firm. As a result, only a short time after the case came to our attention we had the pleasure of sending him the two checks, one for \$12.84 and one for \$12.24, in full settlement of the complaint.

Mr. B. said he had about given up the money, but nevertheless was extremely glad to have it, as we can well understand!

"AMAZED AND DELIGHTED"

After selling eggs to a nearby city market for some time, Mr. A. L. of Ghent, N. Y., unexpectedly had trouble with the firm.

The order was telephoned him, and the buyer promised to pay cash, as had been done before, on receipt of the goods. After waiting several days, Mr. L. reminded the concern of the transaction, and kept on reminding them without result.

Finally a check arrived. It was put through the bank, protested and returned to Mr. L. who had to pay the protest charges.

Then Mr. L. put the matter into our hands. We were able to send him, within a very short time, a check for \$51.76—and it was certified.

As a result he wrote: "I am amazed and delighted to find how quickly you settled this claim, which would have cost me much in time and money to collect, and like many other readers of the American Agriculturist, I am deeply grateful for your kind interest and effort."

INVEST—DON'T SPECULATE

Financial Department:—Would you think an investment in the National Life Preserver Company safe? Also please give me information concerning the American Bond and Mortgage Company, Inc. of New York.—W. B. S., New York.

Shares in the National Life Preserver are not investments at all; they are speculations. American Bond and Mortgage sells bonds based on real estate, which vary in merit according to the property on which they are a lien. They cannot be passed upon as a whole. If you will name any specific issue, we will give our opinion.

* * *

Financial Department:—Two years ago I purchased some stock in the Crusader Film Corporation, 25 West 43rd Street, New York City. Could you inform me if this company is reliable and if the stock is worth hanging on to? I have never received any interest. The agent says that he will sell my stock for me, but insists that it will be paying big in a very short time?—E. P., New York.

Stock of this kind is speculative in the highest degree and in no way suitable for investment. Unless you can afford to assume the risk involved in the moving-picture business, which even with the best of companies is very high, we think you ought to dispose of the stock if you can.

* * *

Financial Department:—Please let me know if the Yerkes Coupling Steel Tie Co., stock is O. K. Also if the Automatic Transportation Company shares are all right? (Circular attached)—C. E., Pennsylvania.

We have no information about Yerkes Coupling. Automatic Transportation stock is speculative in our opinion. Unless you have large resources it is very foolish to buy stock of this kind.

* * *

Financial Department:—I have 25 shares in the M. V. All-Weather Train Controller Company, Inc. (Letter attached) and am about to buy 25 more, but I would like to ask you about this company first. Do you think shares in this company are a good business risk?—F. S. W., New York.

We think these shares are highly speculative and advise against their purchase. As far as we know the stock has no market value.

CHARGE TO PROFIT AND LOSS

Financial Department:—Would you please give me information in reference to the Cain Oil Company of Texas? (Circular attached)—J. N. H., New York.

We never heard of the Cain Oil Company, but we should guess it was well named. As far as we are aware there is no more certain method of losing money than buying stock in oil promotions.

Advertisement

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 437, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

WALKER REMEDY CO., Dept. 437

Waterloo, Iowa

Send me the [] 50c regular size (or [] \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

The Valley of the Giants—By Peter B. Kyne

A VOICE, deep, resonant, kindly, spoke a few feet away. "Who is it?" Shirley, startled, turned swiftly. Seated across the little amphitheatre in a lumberjack's easy-chair fashioned from an old barrel, John Cardigan sat, his sightless gaze bent upon her. "Who is it?" he repeated.

"Shirley Sumner," she answered. "You do not know me, Mr. Cardigan."

"And why did you come here alone?" he queried.

"I—I wanted to think."

"You mean you wanted to think clearly, my dear. Ah, yes, this is the place for thoughts." He was silent a moment. Then: "You were thinking aloud, Miss Shirley Sumner. And I think you rearranged my roses. Didn't I have them on her grave?"

"Yes Mr. Cardigan. I was merely making room for some wild flowers I had gathered."

"Indeed. Then you knew—about her being here."

"Yes, sir. When I was a very little girl, I met your son Bryce. He gave me a ride on his Indian pony, and we came here. So I remember."

"Well, I declare. Ten years ago, eh? You've met Bryce since his return to Sequoia, I believe. He's quite a fellow now."

"He is indeed."

"It was mighty fine of you to bring flowers," he announced presently. "I appreciate that. I wish I could see you. You must be a dear, thoughtful girl. Won't you sit down and talk to me?"

"I should be glad to," she answered, and seated herself on the brown carpet of redwood twigs close to his chair.

"I hadn't been up here for nearly two years until recently. You see I—I don't own the Valley of the Giants any more," he went on.

"Indeed. To whom have you sold it?"

"I do not know, Miss Sumner. I had to sell; I sacrificed my sentiment for my boy. However, the new owner has been wonderfully kind and thoughtful. If that new owner could only understand how truly grateful I am—how profoundly her courtesy touches me—"

"Her courtesy?" Shirley echoed.

"Did a woman buy the Giants?"

He smiled down at her. "Why, certainly. Who but a woman—and a dear, kind, thoughtful woman—would have thought to have this chair made and brought up here for me?"

Fell a long silence between them; then John Cardigan's trembling hand went groping out toward the girl's. "Why, how stupid of me not to have guessed it immediately!" he said. "You are the new owner."

SHE took his great toil-worn hand. "Oh, you must not tell anybody! You mustn't," she cried.

He put his hand on her shoulder as she knelt before him. "Good land of love, girl, what made you do it?"

"I knew it hurt you terribly to sell your Giants. I understood, also, why you were forced to sell; so I—well, I decided the Giants would be safer in my possession than in my uncle's. In all probability he would have logged this valley."

"That does not explain satisfactorily, to me, why you took sides with a stranger against your own kin," John Cardigan persisted.

"Well," Shirley made answer, glad that he could not see the flush of confusion and embarrassment that crimsoned her cheek, "when I came to Sequoia last May, your son and I met, quite accidentally. Then we recalled having met as children, and presently I gathered from his conversation that he and his John-partner, as he called you, were very dear to each other. And later, when Bryce and Moire McTavish told me about you—how you felt your responsibility toward your employees and the community—well, I just couldn't help a leaning toward John-partner and John-partner's boy, because the boy was so fine and true to his father's ideals."

"Ah, he's a man. He is indeed," old John Cardigan murmured proudly. "I dare say you'll never get to know him intimately, but if you should—"

"I know him intimately," she corrected him. "He saved my life the day the log-train ran away. And that was another reason."

"Wonderful," murmured John Cardigan, "wonderful! But still you haven't told me why you paid a hundred thousand dollars for the Giants when you could have bought them for fifty thousand. However, if you do not care to tell me, I shall not insist."

"I would rather not tell you," she answered.

A gentle, prescient smile fringed his old mouth; he wagged his leonine head

as if to say "Why should I ask, when I know?" Fell again a restful silence. Then:

"Am I allowed one guess, Miss Shirley Sumner?"

"Yes, but you would never guess the reason."

"I am a very wise old man. My son is proud, manly, independent. He needed a hundred thousand dollars; you knew it. You wanted to loan him some money, but—you couldn't. So you bought my Valley of the Giants at a preposterous price and kept your action a secret." And he patted her hand gently, as if to silence any denial, while far down the skid-road a voice—a half-trained baritone—floated faintly to them through the forest.

"What is that?" Shirley cried.

"That is my son, coming to fetch his old daddy home," replied John Cardigan. "That thing he's howling is an Indian war-song or psalm of triumph—something his nurse taught him when he wore pinafores. If you'll excuse me, Miss Shirley Sumner, I'll leave you now. I generally contrive to meet him on the trail."

Shirley was tremendously relieved. She did not wish to meet Bryce Cardigan to-day, and she was distinctly grateful to John Cardigan for his consideration in sparing her an interview. She seated herself in the lumberjack's easy-chair, and chin in hand gave herself up to meditation.

A couple of hundred yards down the

trail Bryce met his father. "Hello, John Cardigan!" he called. "What do you mean by skallyhooting through these woods without a pilot?"

"You great overgrown duffer," his father retorted affectionately, "I thought you'd never come." He reached into his pocket for a handkerchief, but failed to find it and searched through another pocket and still another. "By gravy, son," he remarked presently, "I do believe I left my silk handkerchief—the one Moira gave me for my last birthday—up yonder. I wouldn't lose that handkerchief for a farm. Skip along and find it for me, son. I'll wait for you here. Don't worry."

"I'll be back in a pig's whisper," his son replied, and started briskly up the trail, while his father smiled his prescient little smile.

Bryce's brisk step aroused Shirley from her reverie. When she looked up, he was standing in the centre of the little amphitheatre gazing at her.

"You—you!" she stammered, and rose as if to flee.

"The governor sent me back to look for his handkerchief, Shirley," he explained. "He didn't tell me you were here. Guess he didn't hear you." He advanced smilingly toward her. "I'm tremendously glad to see you to-day, Shirley," he said, and paused beside her. "Fate has been singularly kind to me. Indeed, I've been pondering all day as to just how I was to arrange a private little chat with you, without calling at your uncle's house."

"I DON'T feel like chatting to-day," she answered a little drearily—and then he noted her wet lashes. Instantly he was on one knee beside her; his big left arm went around her, and when her hands went to her face, he drew them gently away.

"I've waited too long, sweetheart," he murmured. "Thank God, I can tell you at last, I love you, Shirley. I've loved you from that first day we met at the station, and all these months of strife and repression have served to make me love you the more."

He drew her head down on his breast, his honest brown eyes gazed earnestly, wistfully into hers. "I love you," he whispered. "All that I have—all that

I am—all that I hope to be—I offer to you, Shirley Sumner. You are not indifferent to me, dear. I know you're not; but tell me—answer me—"

"Oh, my dear, impulsive, gentle big sweetheart," she whispered—and then her arms went around his neck, and the fullness of her happiness found vent in tears he did not seek to have her repress.

"Oh, my love!" he cried happily, "I hadn't dared dream of such happiness until to-day."

"Why to-day, Bryce?" she interrupted him.

He took her adorable little nose in his thumb and forefinger and tweaked it gently. "The light began to dawn yesterday, my dear little enemy, following an interesting half-hour with His Honor the Mayor. Acting upon suspicion only, I told Poundstone I was prepared to send him to the rock-pile if he didn't behave himself in the matter of my permanent franchise for the N. C. O.—and the oily old invertebrate wept and promised me anything if I wouldn't disgrace him. So I promised I wouldn't do anything until the franchise matter should be definitely settled—after which I returned to my office, to find awaiting me there the right-of-way man for the Northwestern Pacific. It seems the Northwestern Pacific has decided to build up from Willits, and all that powwow and publicity of Buck Ogilvy's spurred them to action. They figured the C. M. & St. P. was back of the N. C. O."

"Why did they think that, dear?"

"That amazing rascal Buck Ogilvy used to be a C. M. & St. P. man; they thought they traced an analogy, I dare say. At any rate, this right-of-way man was mighty anxious to know whether or not the N. C. O. had purchased from the Cardigan Redwood Lumber Company a site for a terminus on tidewater (we control all the deep-water frontage on the Bay), and when I told him the deal had not yet been closed, he started to close one with me."

"Did you close?"

"My dear girl, will a duck swim? Of course I closed. I sold three quarters of all we had, for three quarters of a million dollars, and an hour ago I received a wire from my attorney in San Francisco informing me that the money had been deposited in escrow there awaiting formal deed. That money puts the Cardigan Redwood Lumber Company in the clear—no receivership for us now, my dear one. And I'm going right ahead building of the N. C. O."

"Bryce," Shirley declared, "haven't I always told you I'd never permit you to build the N. C. O.?"

"Of course," he replied, "but surely you're going to withdraw your objections now."

"I am not. You must choose between the N. C. O. and me." And she met his surprised gaze unflinchingly.

HE stood up and towered above her sternly. "I must build it, Shirley. I've contracted to do it, and I must keep faith with Gregory of the Trinidad Timber Company."

She came closer to him. Suddenly the blaze in her violet eyes gave way to one of mirth. "Oh, you dear, big booby!" she cried. "I was just testing you." And she clung to him, laughing. "You always beat me down—you always win. Bryce, dear, I'm the Laguna Grande Lumber Company, and I repeat for the last time that you shall not build the N. C. O.—because I'm going to merge with the Cardigan Redwood Lumber Company, and then my railroad shall be your railroad, and we'll extend it and haul Gregory's logs for him also."

"God bless my mildewed soul!" he murmured, and drew her to him.

In the gathering dust they walked down the trail. Beside the madrone tree John Cardigan waited patiently.

"Well," he queried when they joined him, "did you find my handkerchief for me, son?"

"I didn't find your handkerchief, John Cardigan," Bryce answered, "but I did find what I suspect you sent me back for—and that is a perfectly wonderful daughter-in-law for you."

The Amphitheatre where the Primeval Giants grew

A Nursery Rhyme Quilt For the A. A. Baby

Twenty Easily Embroidered Squares Represent Children's Beloved Mother Goose Songs

DREAMS of Tom, Tom the Piper's Son, Taffy the Welchman, Curly-Locks, and Simple Simon will be sure to come to the child who sleeps under this Mother Goose Quilt.

For each square represents a familiar nursery rhyme, and when the twenty squares are put together, lo and behold! there is a wonderful quilt to "wrap the Baby Bunting in!"

The picture shows the quilt put together. Each square, you will see, is made up of quaint outlines and even a very little girl or boy can pick out Mary and her famous lamb, the cow jumping over the moon, and other familiar characters from Mother Goose.

The nursery quilt has many advantages besides its appealing rhymes. Each square can be worked separately so that it can be carried in an embroidery bag, as "pick-up-work" without the whole quilt, which would be more bulky.

Then, too, the simplest outline stitch, which works so quickly, is used. It takes about 15 minutes to make each square. Yet if the designs are done in delft blue, for instance, on white, the effect is most unusual. The original quilt used the simplest materials, but evolved a very pretty one by mounting the white squares on blue cambric. The squares may be close together or more widely separated, according to the size of the bed or crib the quilt is to cover.

Something for the Little Girl to Make

Another idea—this quilt would make a splendid thing to use in teaching the little girl to use her needle. If she has a baby brother or sister it will be a work of love for her to stitch the squares one by one. Mother can sew them together for her and finish the hem.

And here's another idea! If you fasten the squares together with the embroidery floss in open work effect, your quilt will never be mussed by folding and keeping in a drawer. You can fold on the lines of the connecting stitches and make it a very small size without rumpeling a single square.

The American Agriculturist has made a special arrangement with the designer of the Mother Goose quilt, Ruby Short McKim, which permits us to offer transfer designs for the entire set of twenty squares for only 65c.

How to Transfer the Picture

You know how to use the transfer patterns, don't you? Have your squares of material ready, allowing a fair margin so that the design does not look crowded. Then put the tissue paper transfer face down on the material, being very sure to have it perfectly straight and in the exact center. Run a hot iron over the paper and when you lift it, you will find your design neatly transferred to the material.

A fairly heavy grade of embroidery cotton or silk show up effectively. Outline stitch (you will notice the pictures are made from straight lines only) is the best to use. You can add any fancy

stitches at the edges that you wish but the simpler this quilt is kept, the prettier it will be.

The outside edges may be hemmed, by machine or hand, or could be turned up and fastened with French knots, featherstitching or any pretty finish, that is a little distinctive.

In addition to furnishing the transfer patterns, we will also send, with every set, a printed copy of the Mother Goose rhymes illustrated. If the little girl tries her hand at the quilt she will enjoy memorizing the simple lines as she takes the stitches.

Grandmother Made Quilts, Too

Surely great grandmother, whose cross-stitched sampler hangs on the wall, or grandmother, who started her first quilt while still a very little girl, never had a more fascinating subject to work on than this! The handicraft editor, who is always on the lookout for original designs, searched for a long time before she found this quilt and then felt very proud to have the exclusive right to its use. The price of the transfer designs just covers the cost, and American Agriculturist readers who buy the set may be sure that they not only have a real "bargain" but also can make, with very little

work, something quite unique to cover the baby's crib.

The twenty blocks, as shown in the picture represent the following rhymes: 1, Mary had a little Lamb; 2, Hey, diddle, diddle; 3, See Saw, Margery Daw; 4, There was an old woman tossed up in a basket; 5, There was a Crooked Man; 6, Barber, Barber, Shave a Pig; 7, The Queen of Hearts; 8, Sing a Song of Sixpence; 9, As I went up a Primrose Hill; 10, Little Tommy Tucker; 11, Tom Tom, the Piper's Son; 12, Polly put the Kettle on; 13, Ding, Dong, Dell; 14, Simple Simon met a Pieman; 15, Three Blind Mice; 16, Taffy was a Welchman; 17, Goosey Goosey, Gander; 18, Curly Locks; 19, A dillor a Dollar, and 20, Blow, Wind Blow.

Send 65c in stamps or money order for the set of quilt transfer blocks with rhymes for each to Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

PIN-MONEY SUGGESTIONS

Yes, the quilt on this page would sell readily in thrift and gift shops during the summer, but that is not our only suggestion for bringing in the extra

dollars. These are two ideas sent by Bell Ellicott Palmer, who knows that both have worked out successfully:

Culled Fruit Possibilities

Last summer one farmer's wife in Illinois spent an hour or two in the cool of morning or evening, turning a few jars of ripe fruit into jelly or preserves or making pickles.

A friend of hers in a nearby town owned a little home, the living-room of which had a bay-window facing the street. Here they put up a counter covered with white oil-cloth. All the jellies, pickles and preserves the country friend could possibly send, sold readily at noon-time to the teachers and children of the next-door school. Often, too, mothers or automobilists took away baskets of the dainty sweets. The profits, shared equally between the two, averaged from \$30 to \$50 a month apiece. During the holidays they averaged \$100 each, as big baskets were purchased for invalids shut-ins or hospitals.

One elderly woman planted a 30-foot square in herbs—mint, sage, lavender, balsam, ambrosia and the like; also lemon-verbena, rose-geranium and parsley. After the soil was once dug for her, it was only a pleasure to plant and cultivate, as these herbs and plants almost take care of themselves.

When the leaves were ready to pick, grandmother gathered and dried them, then filled little white tarleton bags. A grocer-store proprietor gladly sold them, for his customers loved to have delicate old time fragrance in their clothes chest. Mint and parsley were purchased by the epicurean, as even in their dried state they are excellent for winter seasoning. Small bags of rose leaves, lemon-verbena or rose-geranium also sold readily.

The bags sold at 20 cents for the small size; 25-50 cents for the larger. The sofa-cushion size of crushed fragrant leaves went at \$1. The merchant charged 10 per cent as his commission. In one year, grandmother netted \$150.

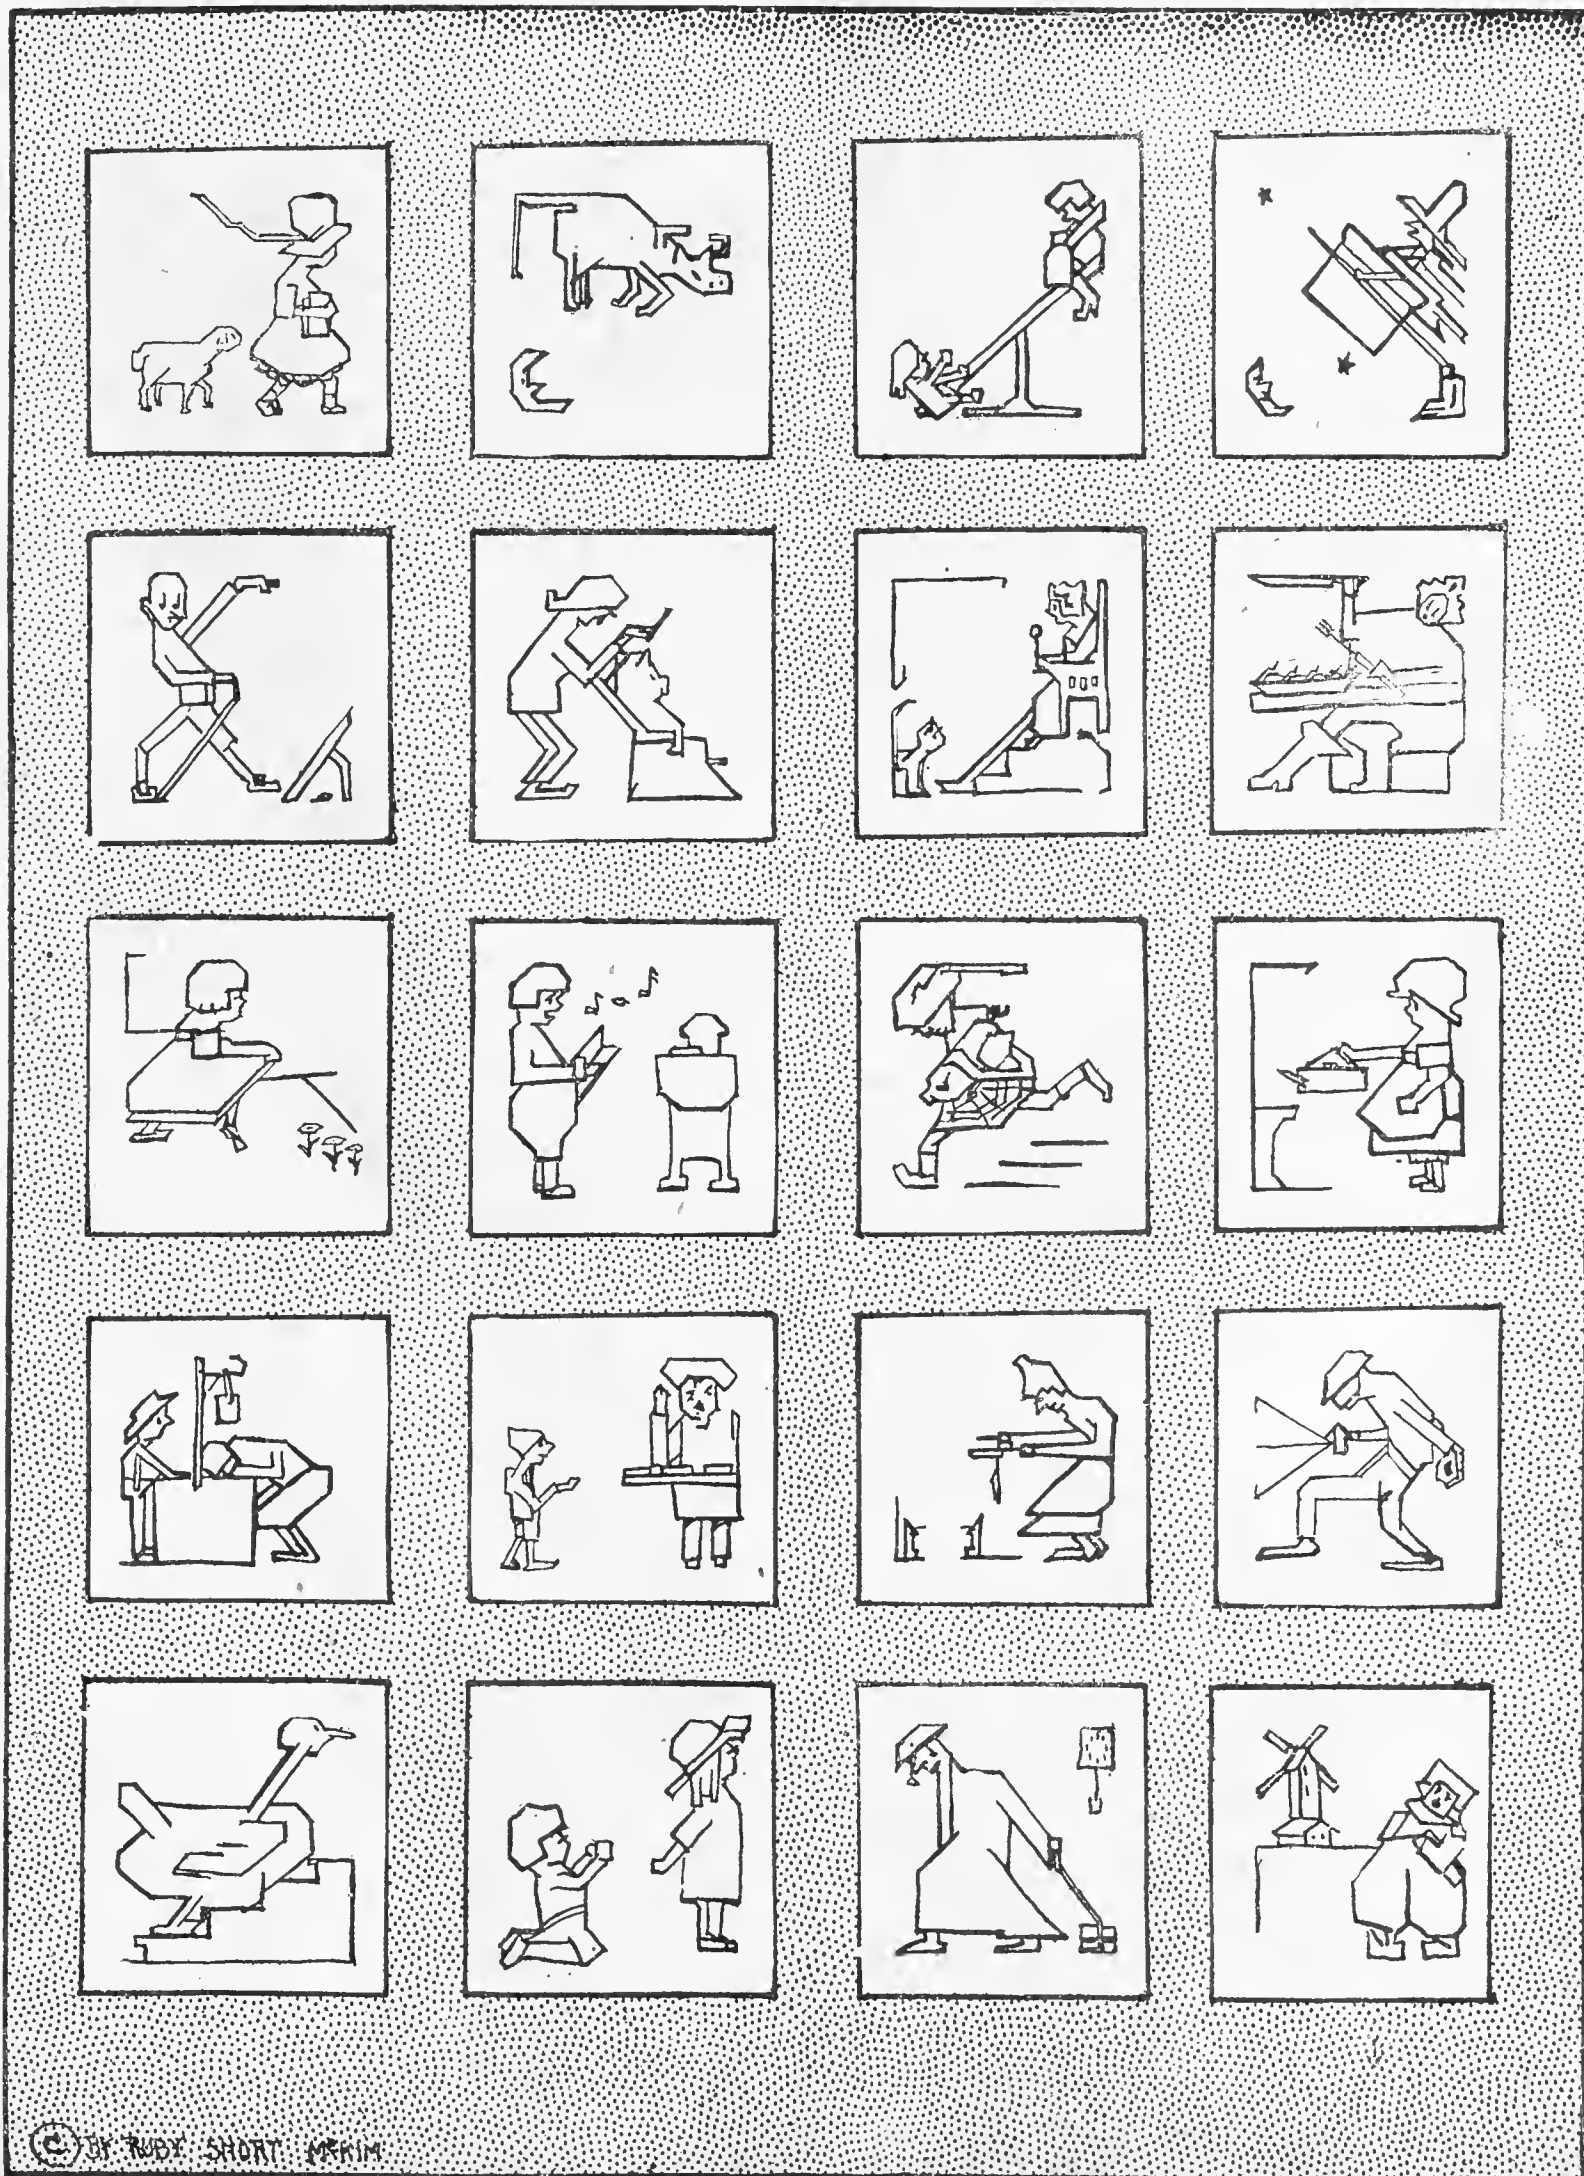

THAT OLD RAIN-COAT

An old raincoat of rubberized cloth has many useful possibilities. Who doesn't dread the return trip from a bathing expedition with piles of soggy suits and shoes in the bottom of the car? From this rubberized cloth, make bags into which the wet things may be thrust, and the car will be neat, with no possibilities of accidental wettings to clean garments.

Another useful article is a roomy flat pocket to be fastened to the rug-rail of the car. Here may safely be placed the collection of "treasures" joyously accumulated by the children—and sometimes by the adults—on summer jaunts!

A similar collection of pockets permanently placed on the wall of the back entry or woodhouse makes a good receptacle for wet rubbers and the like.

An oblong of the cloth makes a convenient apron for such jobs as washing muddy vegetables and scrubbing.—A. M. A.

For Mothers and Babies

More About the Sheppard-Towner Bill and Its Aims

WHILE the death rates from tuberculosis, pneumonia, typhoid fever and diphtheria have decreased year after year, until the average "expectancy of life" has lengthened a full decade since health statistics began to be studied, one record of mortality has remained practically at the same figure since 1900. That is the death rate from causes connected with childbirth. Our business men and women, professionals, farmers, laborers, all stand a chance of living ten years or so longer than did those in similar occupations twenty-five years ago, but our mothers still face possible death in the proportion of a less health-enlightened era.

As this unwelcome fact was gradually forced upon our notice and we saw that, among twenty civilized countries keeping such records, the United States stood seventeenth on the list in maternal mortality, the women of the country began to protest vigorously against the indifference and short-sighted "economy" which denied mothers and babies the right sort of care.

For public health is purchasable and one experiment after another demonstrated that where there were visiting nurses, maternity centers and well-baby clinics, the mortality rate instantly fell far below the average National figure. In one of New York City's most congested tenement districts, where an expert corps of public health nurses visit practically every family, the mother and baby death rate is just half that for a typical, American up-State community boasting fresh air, country food and an apparently splendid chance for every baby born within its boundaries.

Investing in Health is Economy

But could both the Government and the mass of people be made to understand that the ounce of prevention, though it meant the investment of out-and-out cash, was far cheaper than the many pounds of cure—or rather, the cost in deaths, and in illness and permanent suffering? The lesson was driven home so simply and well that the answer to the question, in the shape of the Sheppard-Towner Bill, passed Congress and the House of Representatives triumphantly and is now in working order in twenty-three States, and up for acceptance in the rest.

Just what is the Sheppard-Towner Bill and why does each State have to accept it? The bill provides for a Federal appropriation of funds, the money to be spent "for the promotion of the welfare and hygiene of maternity and infancy." But it does not impose a Federal program upon the States. That is why each State must accept the law for itself.

For each State must vote a similar appropriation, and the joint fund thus created is administered entirely by State officials. The bill merely stimulates the individual States to act by providing a Federal fund.

New York needs the Enabling Act

Nor will any effort be made to force expectant mothers to receive help and advice. It seems amazing that any mother should resent an effort to make it easy for her to get the proper care for herself and her baby, and the bill is so framed that any distrust of its methods can arise only from complete misunderstanding.

The Enabling Act, by which New York would accept a Federal endowment of \$80,000 as soon as a State fund of \$75,000 was appropriated, has had a chequered career in our Senate and Assembly. No one has attempted to deny the basic facts on which the act was framed. No one has contradicted—or could contradict—the statement that literally hundreds of lives would be saved within the next year and thereafter, by the passage of this single bit of legislation. But other States have seen the purely selfish benefits of the act, as well as its great humanitarian purpose, far more clearly than has the Empire State.

New York will eventually pass the Sheppard-Towner Enabling Act. Postponing it means unnecessary loss of life. It means, in one up-State county

alone, the death of 120 babies out of every thousand. "The welfare and hygiene of maternity and infancy" to quote the bill itself, demand its passage and the sooner it is passed, the sooner unnecessary loss of life will be checked.

In the Valley of the Giants

(Continued from page 426)

John Cardigan smiled and held out his arms for her. "This," he said, "is the happiest day that I have known since my boy was born."

CHAPTER XXXIV

SOME days later, Bryce, riding the stop log on the end truck of a long train just in from Cardigan's woods in Township Nine, dropped from the end of the log as the train crawled through the millyard. He hailed Buck Ogilvy in the door of the office.

"Big doings up on Little Laurel Creek, Buck."

"Do tell!" Mr. Ogilvy murmured morosely.

"It was great," Bryce continued. "Old Duncan McTavish returned. His year on the mourner's-bench expired yesterday, and he came back to claim his old job."

"He's one year too late," Ogilvy declared. "I wouldn't let Jules Rondeau quit for a farm. Some woods-boss, that—and his first job with this company was the dirtiest you could hand him—smearing grease on the skid-road at a dollar and a half a day and found. He can get out the logs, hang his rascally hide, and I'm for him."

"I'm afraid you haven't anything to say about it, Buck," Bryce replied dryly.

"I haven't, eh? Well, any time you deny me the privilege of hiring and firing, you're going to be out the service of a rattling good general manager, my son."

"Oh, very well," Bryce laughed. "Have it your own way. Only if you can drive out Duncan McTavish, I'd like to see you do it. Old Duncan is in possession."

"What do you mean—in possession?"

"At ten o'clock this morning McTavish appeared at our log-landing. The whiskey-fat was all gone, and he appeared forty years old instead of sixty. With a whoop he came straight for Jules Rondeau. The big Canuck saw him coming and knew what his visit portended—so he wasn't taken unawares. It was a case of fight for his job—and Rondeau fought."

"The devil you say!"

"I do—and there was the devil to pay. It was a rough and tumble—just the kind of fight Rondeau likes. Nevertheless old Duncan floored him. While he's been away somebody taught him the hammer-lock and the crotch-hold and a few more fancy ones, and he got to work on Rondeau in a hurry. In fact, he had to, for if the tussle had gone over five minutes, Rondeau's youth would have decided the issue."

"And Rondeau was whipped?"

"To a whisper. Mac floored him, climbed him, and choked him until he beat the ground with his free hand in token of surrender; whereupon old Duncan let him up, and Rondeau went to his shanty and packed. The last I saw of him he was headed over the hill to Camp Two on Laguna Grande. He'll probably chase that assistant woods-boss out of Shirley's woods. I don't care if he does. What interests me is the fact that the old Cardigan woods-boss is back and I'm mighty glad of it. The old horsethief has had his lesson and I think he's cured."

"The infamous old outlaw!"

"Mac knows the San Hedrin as I know my own pocket. He'll be a tower of strength when we open up that tract after the railroad builds in. By the way, has my dad been down this morning?"

"Yes. Moira read the mail to him and then took him up to the Valley of the Giants. He said he wanted to do a little quiet figuring on that new steam schooner you're thinking of building. He thinks she ought to be bigger—big enough to carry two million feet."

For Strawberry Time

Recipes, Patterns and Other Household News

THE strawberry season is all too short, so the luscious red berries should be used in every possible way before the beds are empty. These are four tested recipes from the land of real shortcake. All the family will enjoy these delicacies as they are made in Kentucky.

Strawberry Shortcake

One cup butter; 1 cup sugar; 1 egg; pinch of salt; 1 cup milk; 1 teaspoon vanilla; ½ pint whipping cream; 1 quart berries; 2 cups flour; 3 level teaspoons baking powder.

Cream butter and sugar; add beaten egg and part of dry ingredients, which have been sifted together, then alternate milk and remainder of dry ingredients. Flavor and bake in moderate oven 20 or 30 minutes. Cool, split, and spread with the cream well whipped, and crushed, sweetened berries. Garnish top with cream and whole berries.

Strawberry Jelly

Cover the contents of an envelope of gelatin with ½ cup cold water and allow to stand about five minutes. Add ½ cup boiling water, ¼ cup lemon juice, 1¾ cups strawberry juice and one cup of sugar. Stand on the back of the range until all sugar is dissolved. Strain into a wet mold and set in a cool place to harden. Serve with cream, plain or whipped, or with a soft-boiled custard.

Strawberry Ice Cream

One quart cream; 1 cup sugar; 1 teaspoon vanilla; 1 quart strawberries which have been washed, hulled, crushed and sweetened slightly.

When frozen allow to stand—well packed—for an hour or more to ripen.

Strawberry Sherbert

One quart cream; 1 cup sugar; 3 cups berries; juice of two lemons.

Put sugar over berries and allow to dissolve. Mix with very cold cream and freeze.—LENNIE HOLLON LAND.

ENCOURAGING THE BOY

I was much interested in Jean Howard's experiences about "Son's Calf, Father's Cow". There have been too many such happenings, so thought I would tell you how my son-in-law has solved the problem so that there is

good will and harmony between father and son.

When son Henry was about 12 or 13, a calf which came on his birthday was given to him. He was told that when it got to be a cow and there was a calf, that calf would be sold and he would have the money to put in the bank or spend as he saw fit. But as long as father fed and cared for the cow, the profits went for care and feed, which settled the problem. The boy is now 17, the cow has had two calves and son counts a lot on the money from his calf every spring and is interested in stock and farms. He wants to go to Cornell when he gets through high school.

During vacation when he helps his father through haying and harvest,

NEXT WEEK—"THE BROWN MOUSE"

JIM IRWIN changed things in Woodruff District—but it took a woman's scorn to get him under-way. There "The Brown Mouse" came in, and Jennie Woodruff began to realize that you can't always stop something you've started.

Next week, Herbert Quick's story of farm life will begin on the serial page. It is called "The Brown Mouse" and it takes some time to find out what the title means, but from the first you will like Jim Irwin, and Jennie too, provoking as she sometimes is.

Don't miss a number. You will want to keep them all, for the story is worth several re-readings.

the boy is paid something, not as much as a man could earn, but enough so he feels he is earning something, and he has quite a little bank account.

I think that parents who take things back for gain for themselves have very little sense of justice. If boys are trustworthy, they should be encouraged, if we expect them to stay on the farm.—MRS. H. H., New York.

Spending time in planning clothes may mean spending less money in buying them.

FOR THE WOMAN WHO IS CLEVER WITH THE NEEDLE

TWO suits from one pattern—A boy's baseball outfit and an everyday suit! The school suit has the popular mannish shirt and knickers; the other is exactly like Babe Ruth's working clothes! No. 1694 comes in sizes 8, 10, 12, 14 and 16 years. Price, 12c.

LONG waistslines are becoming and this dress has other smart new features. Are you anxious to have a new frock that's simple to make, that won't cost you much and looks a great deal more? Then here's the dress for you, for it requires only 2½ yards of 40-inch material with ¾ yard 30-inch material for the trimming. No. 1725 comes in sizes 16 years, 36, 38, and 40 inches bust measure. Price, 12c. stamps or coin (stamps preferred).

PATTERNS No. 1277 and 1623 illustrate the correct waist and skirt for this summer. The waist 1277 has the round neck and ruffle trimming seen in the best shops. It comes in sizes 36, 38, 40 and 42 inches bust measure. Pattern, 12c. No. 1623 shows the left side closing and uneven hemline which are popular this year. It cuts in sizes 16 years, 28, 30, 32 and 34 inches waist measure. Pattern, 12c.

TO ORDER, write all information clearly, enclose stamps for correct amount, mail to the Fashion Department, American Agriculturist, 461 4th Avenue, New York.

If you add ten cents, a copy of our new summer catalogue, brimful of pretty and practical suggestions will be added to your order. It is worth many times the cost and we advise you not to be without a copy.

NEW PERFECTION Oil Cook Stoves and Ovens

The ideal, up-to-date range for the country home

THE day of the coal and wood range is passing, and in country homes more than anywhere. Up-to-date housewives are glad to get rid of all the care and work that go with a coal range. They are discovering that a New Perfection cuts kitchen work in half and gives perfect satisfaction in every kind of cooking.

When you're ready to cook, the New Perfection is ready with a full supply of heat just a moment after you light it. And you can regulate the heat instantly—as much or as little as you need.

New Perfection ranges drive the drudgery of cooking out of the kitchen. The coal, wood, ashes, litter and care that go with a coal range all go out the door with it when you bring in a New Perfection. The best dealers carry it and will be glad to give you a demonstration.

Reviewing the Latest Eastern Markets and Prices

POTATOES CONTINUE WEAKER

HERSCHEL H. JONES

WITH heaviest supplies of the season in the New York City freight yards, prices declined last week on both old and new potatoes. Idaho Rurals have been quoted as low as \$1.90 cwt. sacked, delivered in carlots. Some sprouted and spongy have sold as low as \$3, full-weights (180 lbs.), in the yards. States 150-lb. sacks sold from \$2.50 to \$3; Maines \$3.50 @ 4.50 for 180 lbs., bulk; Wisconsin round whites, \$1.75 @ 2.50 for 150-lb. sack.

Florida new potatoes sold on the dock for \$6.50 per bbl, a decline of \$2 or more per barrel from the week previous. About 50 per cent of the crop has been moved.

Some dealers in the market are of the opinion that old potatoes will clean up in good shape, counting on an improvement in the demand between the end of the Florida season and the movement of large quantities of South Carolina and Virginia potatoes. A number of carloads of potatoes were put into storage in New York last week at the time of the excess supply in the yards in expectation of a somewhat better price. At country points last week practically nothing was bought. There were very few shipments made from Maine because of the interference with transportation facilities caused by recent heavy storms. Very few potatoes were shipped from New York State due to dealers holding for relatively high prices and practically nothing was bought in Wisconsin and Michigan for the New York market.

FANCY APPLE SUPPLIES LIGHT

On fancy apples both barreled and boxed the market was quite firm last week owing to light supplies. Demand on all grades of apples was sufficient to keep the arrivals cleaned up at satisfactory prices. The prospect is for a favorable market for the rest of the season, although there will be a tendency to turn to other fresh new fruits from now on.

Fancy Baldwin, A grade, 2½-inch, sold per bbl. at \$7, with some at \$7.50; fancy Ben Davis reached \$4.50; best and fancy Pippins, \$7.50 @ \$9.

BUTTER UP AGAIN

The slight falling off in receipts last week, together with general good trading, caused a stronger market and an advance in prices over the previous week. The demand for consumption is very active, and a considerable quantity of butter has been shipped from New York to other Eastern markets, which resulted in clearing up the fresh arrivals and reducing the stocks on hand in the wholesale market. Many dealers were disappointed at the lack of the expected increase in receipts. Reports from producing sections confirm the earlier information that the season was late. It is possible that supplies may run short enough within the next week or two to cause a still further advance, but the dealers in the market generally are quite conservative as to the situation.

Creamery extras, 92 score, were quoted on May 3 at 43½c, compared with 42c in the previous week, and 36½ to 37½c on the same date in 1922. State dairy butter, fine to fancy, was quoted on May 3 at 43c, compared with 34 to 36c on May 3, 1922.

The stocks of butter on hand in cold storage in the four large markets of the country on May 3 amounted to 1,176,069 lbs., compared with 1,277,703 lbs. on the same date last year. Receipts of butter in the four large markets last week were 3,000 lbs. short of the previous week, but about the same as in the same week last year. The total receipts in the four large markets since January 1 are considerably larger than in the same period in 1922.

CHEESE MARKET FIRM

Instead of declining as expected, the cheese market last week became even stronger, and State flats, fresh, average run, were quoted on May 3 at 22c per lb., compared with 21 to 21½c per lb. a week previous. State flats, held, average run, continued at 27½ to 28c per lb. The Wisconsin primary markets advanced early last week, and

there is no indication of a material accumulation in Wisconsin. It is reported that the continued cold weather in the West has prevented a rapid increase in the milk flow. In the East production has increased, but there is keen competition for all good quality stock, and an unusually large part of the prospective production has already been contracted for. Receipts of cheese at New York last week were 578,871 lbs., compared with the receipts of 825,072 in the corresponding week last year.

These continued relatively high prices for cheese and butter will probably help the market for fluid milk. At this time last year fresh flats, average run, were selling at 16½ to 17½c per lb., or about 25 per cent lower than the present price.

BROILERS MORE PLENTIFUL

The broiler season is advancing with gradually increasing supplies, and prices declined last week about 5c each.

in the four large markets. In March this year, the receipts at these markets were 146,080 greater than last year, in spite of less favorable weather for production in February. The question is whether the production during the month of May is going to be proportionately larger resulting in lower prices than now prevail and a surplus accumulation of storage stocks. It is possible, as shown by statistics of 1918 and 1922, for a shortage on May 1 to be changed to an excess before the point of maximum quantity in storage usually around August 1. In general, the large factors in the wholesale egg market are, it seems, surprised at the way the market has held up during the last month, and it is possible that conditions may continue quite favorable for the egg producer.

From reports received as to prices being paid for eggs in the country, it is apparent that small producers unable to ship in case lots are compelled to

New York State last week by river barge caused a decline to \$30 per ton and a much duller market.

GRAIN PRICES DECLINE

Inactivity in buying caused a break in the grain market last week. Speculative buying of future grains became very nervous and irregular. The visible supply of wheat was reported by U. S. Department of Agriculture on April 30, as 44,521,000 bu. compared with 31,281,000 bu. same date last year.

The following were cash grain quotations on May 3:

Wheat, steady, No. 2 red domestic, \$1.46; No. 2 hard winter, export, \$1.35½; corn, No. 2 yellow, \$1.02¼; No. 2 mixed, \$1.01¼; oats, No. 2 white, 56c; No. 3 white, 54½ @ 55c; ordinary white clipped, 55½ @ 57.

Chicago—Wheat, No. 2 red, \$1.30; No. 2 hard winter, \$1.22; corn, No. 2 white, 83c; No. 2 yellow, 83½ @ 84c; oats, No. 2 white, 46 @ 47½c; No. 3 white, 46c; rye, 82½c; barley, 63 @ 70c.

DULL TRADING IN FEEDS

The demand for wheat feeds became less active last week, and the feed market generally was duller, although prices remained steady. Buffalo quotations on carlots Buffalo rate basis, in 100-lb. sacks, per ton, May 3, were as follows:

Gluten feed, \$39.55; cottonseed meal, \$46.50; oil meal, \$42; dried brewers grains, \$35; standard spring bran, \$35.25; hard winter bran, \$35.75; standard spring middlings, \$34.75; choice flour middlings, \$37; white hominy, \$35.80. No. 2 Yellow corn per bushel, 94c; No. 3, 93c; No. 2 white oats, per bushel, 53c; No. 3, 51½c; barley feed, 74 @ 78c.

WOOL PRICES FIRM

The wool market is still firm and prices steady. The latest quotations available on the Boston market covering Michigan and New York unwashed fleeces are as follows: Delaine, 55c per lb.; Fine, 48 @ 50c; ½ blood, 53 @ 54c; ¾ blood, 54 @ 55c; ¼ blood, 52c. Pennsylvania fleeces sold around May 1, in the Boston market at: Delaine, unwashed, 56 @ 58c; fine unwashed, 50 @ 51c; ¾ blood, combing, 55 @ 56c; ½ blood, combing, 57 @ 58c.

MAPLE SYRUP UNSETTLED

Although a great deal of maple syrup and sugar of a wide range of quality is being offered to large New York buyers, it can hardly be said that there is any settled market yet. The lack of knowledge of quality on the part of both consumers and buyers throws the poorest sugar and syrup into almost direct competition with the best. In the last week a considerable quantity of Canadian and Vermont sugar of extremely poor quality, almost black in color, has been offered large buyers in New York at very low prices. Some manufacturers of blended syrup prefer this cheap sugar because of its strong flavor, but it is not to be compared with sugar made from pure, clean, filtered syrup. Really fancy quality pure maple in gallon cans is selling wholesale at \$2 to \$2.35 per gallon in gallon cans, and pure syrup of average quality shipped on consignment is selling at \$1.90 to \$2 per gallon.

Maple sugar is still quoted at 25 to 30c in lb. cakes, but irregular quality tub sugar is offered at much lower prices.

No firm prices seem yet to be established on Vermont sugar. The production in Vermont this year is estimated at somewhere near third-thirds of normal.

HONEY SEASON LATE

The U. S. Department of Agriculture reports that the honey season in the Northeastern States is two weeks later than normal. Heavy winter and spring losses are reported, usually 15 to 25%, some as high as 40% and a few good beekeepers report losses under 5%. Clover looks fine but lack of rain is retarding growth in some sections. Bees are working on maple and early flowers. Supplies of honey in the country are nearly exhausted. A few sales are reported of white extracted in single 60-lb. cans at 11 @ 12c, in ton lots, 9 @ 11c per lb., single 5-lb pails selling at 19 to 20c, in wholesale lots, 13 @ 14c per lb.

Dairy improvement association records shows that the feed cost of 100 pounds of milk varies 40 cents to \$1.30, depending largely on the production of the cow.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on May 4:

Eggs, Nearbys (cents per dozen)			
New Jersey hennery whites uncandled, extras...	40 @ 41
Other hennery whites, extras.....	35 @ 36
Extra firsts.....	32½ @ 34	30 @ 32	29½
Firsts.....	31 @ 32	28
Gathered, whites, first to extra firsts.....	31 @ 34
Lower grades.....	28 @ 30
Hennery browns, extras.....	36 @ 37
Gathered browns and mixed colors, extras.....	32 @ 34	29 @ 30
Pullets No. 1.....	30 @ 31
Butter (cents per pound)			
Creamery (salted) high score.....	43½ @ 44½	46 @ 47
Extra (92 score).....	43½	44 @ 45	43½
State dairy (salted), finest.....	43	42 @ 43
Good to prime.....	41½ @ 42½	34 @ 40
Hay and Straw, Large Bales (per ton)			
U. S. Grades	Old Grade Standards		
Timothy No. 2.....	\$24 @ 25	\$20 @ 21	\$21 @ 22
Timothy No. 3.....	21 @ 23	19 @ 20
Timothy Sample.....	13 @ 16
Fancy light clover mixed.....	25 @ 26	21 @ 22
Alfalfa, second cutting.....	27 @ 29
Oat straw No. 1.....	12	15.50 @ 16
Live Poultry, Express Lots (cents per lb.)			
Fowls, colored fancy, heavy.....	26 @ 27	26 @ 27	28 @ 29
Fowls, leghorns and poor.....	23 @ 24
Chickens, leghorns.....	14	17 @ 18	26 @ 27
Roosters.....	17 @ 19
Live Stock (cents per pound)			
Calves, good to medium.....	7½ @ 10	9 @ 11
Bulls, common to good.....	4½ @ 5
Lambs, common to good.....	11 @ 14½	11 @ 12½
Sheep, common to good ewes.....	5½ @ 8	5 @ 6½
Hogs, Yorkers.....	9	8¾ @ 9

Colored large broilers sold at 55c each on May 3, small, 50c; Leghorns, large, 50c; small, 40 @ 45c. Some sales of White Leghorn broilers by firms who have developed an Italian trade, are at higher prices than quoted. Many White Leghorns are shipped in too small. Demand now is chiefly for large broilers weighing around 1½ to 2 lbs. each. In another month or two the large birds will become too heavy and the demand will shift to light stock.

EGG MARKET HOLDS STEADY

During the entire month of April and the first week in May the market for eggs held at higher levels than was anticipated, and instead of quotations reaching the lowest market around May 1, as was expected, there was a slight advance last week, especially for better qualities. The supply of fancy nearby hennery eggs continued scarce, and quotations on New Jersey hennery whites, uncandled extras, advanced to 40 @ 41c per dozen. Nearby and nearby Western hennery whites, average extras, were quoted at 35 to 36c on May 3, but the vast majority of the receipts of State and other nearby eggs were more or less defective and sold at prices ranging from 10 to 30c. These average quality eggs of irregular values moved very slowly, and the market was dull for them. Some undergrades of nearby eggs sold at 28 to 29c. Demand is strong for the large-size chalk-white shell, light yolk, fancy fresh egg at top quotations.

Storage packed Western eggs of the quality of firsts and better are reported to be selling at a range from 30c up to 31½c, with an occasional car at even higher prices. The total amount of eggs put into cold storage during the month of April was over 5,000 cases less than in the same month last year

sell their eggs locally at very low prices as compared with the New York market.

At this time last year extra fancy, nearby hennery whites were selling wholesale at 1 to 2c lower than present quotations. Average qualities were selling then at about same prices, probably a little higher for the bulk of nearbys.

VEAL SUPPLY MODERATE

The receipts of country dressed calves at New York last week were not excessive and the demand continued fair at steady prices. The following quotations cover country dressed veal calves on May 3, per lb.: choice, 15 @ 16c; good to prime, 12 @ 14c; poor to fair, 9 @ 11c; common, 5 @ 8c; barnyards, 5 @ 7c.

Dressed lambs were in somewhat larger supply and poor to good, sold at \$3 to \$8 per carcass depending on quality, while choice hothouse lambs sold at \$9 to \$10.

GOOD HAY IN DEMAND

A quantity of new permits were issued last week for shipments of hay to the 33rd Street sheds at New York. Under the new rules these permits have a time limit of 15 days from date of issue and it is planned to issue a new batch every 15 days depending upon the tendency toward accumulation on the railroad.

Top qualities of hay are scarce and in strong demand, but there is a considerable supply of low grade hay at all terminal points in addition to receipts by boat. Much of the boat hay is trash and is offered as low as \$13 per ton. As warm weather comes on there will be very little demand for any hay with a percentage of clover.

Heavy shipments of rye straw from

The Modern Woman Writes the Modern Way

MOTHER is just as up-to-date as the rest of her family! When it comes to sending to the city for things her family needs she *types* her order quickly and clearly on the Underwood Portable, and her goods come through with never a mistake. She's sure of this, because she checks the goods against the carbon copy of her order.

The Underwood Portable saves time and work on all the writing done at home,—business and personal letters, recipes, extracts from

magazines, and orders for supplies from far away.

Young people at school who form the habit of typewriting lessons, essays, etc., are bound to win favorable attention from their instructors. What is more, in acquiring a knowledge of typewriting they have gained something that will be valuable to them for many years to come.

It is easy—in fact it's fun—to write on this compact, sturdy little typewriter. Typewriting is quickly learned on this machine—a few hours will make anyone reasonably proficient.

How Shall We Control TB?—By H. E. Babcock

Before You Invest, Investigate!

American Agriculturist Radio Talk on "How Scoundrels Get Rich"

HAVE you \$100 or \$500 on which you would like to realize handsome returns? If so, you are one of millions of people whose savings even on a \$10 down and \$10 a month plan, are snared by men who spend their lives devising law-proof traps for uninformed investors. The American Agriculturist believes it desirable that you should know about some of these schemes and through the courtesy of WEAf this practical message designed to help you guard against the wily promotor or fly-by-night vendor of securities is given gladly.

Whether or not this knowledge will protect you is for you alone to decide. However, authorities have estimated that investing is more or less of a closed book to most people. Mr. David F. Houston, Former Secretary of the United States Treasury and now President of the Bell Telephone Securities Company, said recently that possibly not one person in a hundred is well informed concerning principles of safe investment.

Some of these principles can be stated here—the primary one is "Before you Invest. Investigate." But at this particular moment it may be interesting to show the other side of the picture by mentioning a few of the 57 varieties of methods by which tricksters get the savings of trusting investors.

Of course, the underlying lure—with emphasis on "lying"—used in the glowing literature and sales talks of irresponsible sellers of securities is the hope of large profits. One professional promotor admitted recently that the only way he could sell stock was to work on the principle that "hope springs eternal in the human breast." A real estate developer who has been selling boggy farm land at Muscle Shoals, Alabama, to wage-earners in New York at city lot prices, said that no one could ever sell anything in the slow-going, educational way and that he told his salesmen to "point" out the future, feature the prospective profits and close quick. Henry Ford's name and picture were used in this selling campaign, because of the automobile manufacturer's offer to take over from the United States Government the nitrate plant and power dam on the Tennessee River which was projected during the war.

In literature which may have reached you by mail you have perhaps noticed that various promoters of new and as yet unsuccessful companies feature the great proportions to which \$100 or \$500 invested in other companies has grown. These comparative figures, of course, refer to long-established, successful concerns which developed from small beginnings by careful management over a long period of years. The figures cited have no bearing whatever on the prospect of the stocks offered you. They are featured to arouse your hopes, stir your imagination and to divert your attention from the truth about the company whose stock you are importuned to buy.

The "Blind Pool"

From time to time, "blind pools" which take the gullible investor's money, have flourished in several cities. This swindle is very much akin to the notorious Ponzi affair. A "blind pool" is also known as a "participating syndicate" or "discretionary pool." Clients are assured of from 20 per cent to 120 per cent in yearly dividends, payable

By H. J. KENNER

monthly, after agreeing to pay the firm 30 per cent of the profits. They assign to the firm full right to trade with the clients' money as it sees fit on the stock market. These pool operators always claim to have inside knowledge with which to "work" the stock market and to have close connections with the so-called Wizards of Wall Street. But as a matter of fact, dividends to clients are always paid out of the golden flow of money into the office and when fresh clients fail to appear the blind pool proprietors disappear.

Nearly every new method of serving investors is imitated by unscrupulous men and firms to get-rich-quick at the expense of uninformed investors. One such scheme used

urges the stockholder to turn in his shares for "something much better" with a bigger chance to win. When the frightened stockholder does this, he gets stock of much more doubtful value for which he sometimes has to pay 25 per cent additional. And then the "alleged special trustee" unloads the stock he received at whatever it will bring in the open market, usually he pockets the proceeds.

A scheme called "insured investing" is now in vogue. This plan calls for setting aside a third of the stockholder's money with a trust company as a fund which accumulates and returns the amount originally invested at the end of seventeen or twenty years, if the promotion goes wrong. This creates a sense of false security in the mind of the prospect who is not at all insured against

loss by this system, but in effect sets aside a portion of his own money to be returned with interest after twenty years. The rest of his so-called investment is divided between the promotor and the infant company's treasury.

Such practices as these by pirates of promotion and freebooters of finance, besides exploiting unsuspecting people, cast a slur on legitimate investment, brokerage and banking business everywhere. Fair-dealing financiers outnumber vastly illegitimate sellers of securities, but it is the latter who are active in schemes to separate savings painlessly from the man or woman on the farm, in the office, store or factory.

Realizing the great harm done due to losses brought about by these nefarious operations, the business men of New York have

determined to set their hands strongly against practices which create false impressions about financial New York and which betray the confidence which investors have a right to place in New York business. To carry on a permanent and militant campaign against swindlers and serve as a Clearing House for information helpful to investors, New York business men have organized the Better Business Bureau. The Bureau's functions are:

1. Developing facts about doubtful securities and vendors in order to correct abuses and to provide facts for investors before they invest.
2. Reducing unfair competition in the Investment Field.
3. Building confidence in legitimate business by protective action in the public interest, and by helping to spread a better understanding of the principles of sound investment.
4. Aiding the authorities in the enforcement of fraud laws designed to curb stock-swindling.

An Association of Service

In its service to the public the Bureau co-operates with organizations of similar name in 38 other principal cities and with the National Vigilance Committee of the Associated Advertising Clubs of the World. It is ready to cooperate with township and county farm organizations and with agricultural associations in New York and other Eastern States.

The Bureau has nothing whatever to sell. Its action is always disinterested and is taken in the public interest. It is supported by voluntary subscriptions made by financial and commercial firms of New York and is aided by the press in its distribution of protective facts of interest to the public.

By writing to the American Agriculturist or by consulting your banker or writing direct to the Better Business Bureau, 280

(Continued on page 440)

"Stop, Look and Listen!"

WE never get over the feeling of amazement about the thousands of farmers, and other people, too, for that matter, who are taken in by the glib statements of scoundrels who make glittering promises about their get-rich-quick schemes. In spite of the very hard times on the farm we doubt if there is a single farm community where there is not at least one, and more often several, who have invested some of their small savings on promises of schemes that never work out. People do not tell of these investments to their neighbors, but we are constantly saddened by the large number of letters which we receive about them. Because of this, we are doing all we can to get people to "stop, look and listen" before they take steps that usually mean the loss of hard-earned savings.

On this page is the speech of Mr. H. J. Kenner, Managing Secretary of the Better Business Bureau, which is an organization of business men to prevent people from losing their savings in unsafe schemes. This speech was broadcast on American Agriculturist radio program from the WEAf station at 6:30 P. M. Wednesday evening, May 16. A careful reading of it may save you a good deal of sorrow.—The Editors.

"subscription rights" to fool the unwary. A circular letter was sent to stockholders in well-known successful companies with a beautifully colored certificate attached purporting to give the recipient the "right" to buy stock in the new concern which, by the way, used a corporate name looking like and sounding like that of a large and established corporation in the same field. This created confusion in the mind of the reader: and by the ruse, payments were received from hundreds of investors who thought the "right" valuable, which in fact, were worthless.

How "Reloading" Works

By another method termed "reloading," money is taken from stockholders in companies which have not paid dividends and which, though the stockholder does not know it, are badly in need of funds. This method is sometimes legitimate, but swindling organizations have made a specialty of selling new allotments to old stockholders by elaborately building up the impression that the company is approaching prosperity, that a "melon" is about to be cut, and that as a special favor to those who had faith in the company by investing as an early investor in its shares, they are permitted to share in the large profits to come. In some of these instances shares were "reloaded" on victims at five or ten times the price the swindlers paid for the stock and at prices often twenty-five to fifty times actual worth.

In the oil and mining promotions, one of the favorite devices of the dupester is the "special trustee" scheme. The faker sends a letter to stockholders of a legitimate company on what appears to be the company's letterhead and signs it, "Special Trustee For Stockholders." The letter intimates that the company is about to go on the rocks and

How Shall We Control TB?

New York State Farm Bureau Committee Arrives at Some Conclusions

THE following questions were put by the New York State Farm Bureau Federation Committees on Tuberculosis Eradication to a representative gathering of County Tuberculosis Committees at a conference held in Ithaca, on May 1:

1. Should Bovine tuberculosis in New York State be eradicated? Why?
2. Should the State continue to subsidize eradication?
 - A. By Indemnities?
 - B. By free testing, by state veterinarian, or county veterinarians?
3. Are indemnities too high?
4. Are appraisals too liberal?
5. Is the follow-up on tested herds thorough enough?
6. Is the State ready for a universal plan of area testing in contrast to testing selected herds? Or should this be optional?
7. What is the best plan of county cooperation?
 - A. The Madison County plan?
 - B. The Tompkins County plan?
 - C. The Cortland County plan?
8. How may this Committee best serve the cattle interests of New York State?

The answers, along with the advice given by State and Federal officials in charge of bovine tuberculosis eradication, will help the Committee to arrive at its final conclusions which it expects to submit to the State Farm Bureau Federation sometime in the near future.

For the benefit of those who have not followed the work of this Committee, I might say it was appointed by President Enos Lee of the New York State Farm Bureau Federation following the annual meeting of that organization in Syracuse, when a number of resolutions were introduced asking the Federation to go on record in favor of appropriations for tuberculosis eradication work.

The Committee is composed of men who should be competent to pass judgment on the problems concerning bovine tuberculosis eradication in a comprehensive and fair manner.

Personnel of the Committee

L. A. Toan of Perry, N. Y. represents the New York State Guernsey Club. Mr. Toan is president of the club and is himself owner of a fine herd of accredited Guernseys. E. R. Zimmer represented the New York State Holstein-Friesian Association. His death has been a great loss to the Committee. His place will now be filled by M. C. Bond, his successor as Secretary of the Association. Mr. Bond has had considerable practical experience with the control of tuberculosis eradication at the Morrisville

By H. E. BABCOCK

School of Agriculture and is in a position to rapidly establish contact with the Holstein breeders of the State.

M. E. Buckley of the Lincoln School of Agriculture in Westchester County, N. Y. has probably had more experience in handling reacting cattle and developing healthy herds from them than any other man in the United States. Mr. Buckley knows cows and is a student of tuberculosis.

Jay Coryell, State Director of Farm

their observations and their plans for the State.

The third meeting of the Committee was held in Ithaca, on May 1, the one with which this article deals, and is the one which Committee members feel has meant the most to them. The meeting was held in Ithaca because accessible to that city are a number of counties in which tuberculosis eradication is being pushed in an organized manner. It was thought it would be possible to get representatives from these counties into Ithaca for a meeting. This proved to be the case.

There were present representatives from Onondaga, Cortland, Tompkins, Steuben, Chenango, Broome, Tioga and Madison counties. In all about thirty-five men met with the Committee.

The questions set forth in the beginning of this article were decided upon by the Committee in advance of the meeting and were presented to the conference in order that something definite might be arrived at and particularly in order that the Committee might get light on the questions which its investigations had convinced the members were fundamental.

On the question of eradication of bovine tuberculosis, the first one put to the conference, there was no disagreement. If the men present with the Committee fairly

represent the progressive cattle owners of the State, there is no question about how they feel concerning the disease.

The reasons given were; first, the protection of the public health, particularly that of rural people, those living on the farms and in small villages who are not protected by pasteurization; and second, the preservation of the cattle industry, both as an agricultural asset of fundamental importance and as a safeguard for the future milk supply.

As might have been expected, those present, being breeders or the representatives of breeders, were unanimously in favor of the continuation of indemnities. It was the unanimous opinion that if tuberculosis eradication is to succeed, the State must bear part of the loss as its contribution to the safeguarding of public health.

Indemnity Limits Not Too High

In the discussion of the question of the size of indemnities it seemed to be the unanimous opinion of those present that the indemnity limits as now set by law are not too high and that under them it is the owner of really high grade cattle who suffers, it not

(Continued on page 439)

What a Satisfaction It Is to Know They Are All Free of Tuberculosis

Bureaus, as Secretary of the Committee, has intimate contact with the various county farm bureau associations and the county agents who are interested in the work. The writer, as Chairman, will hope to contribute something from his practical experience and from his observations of the work generally throughout the State.

What the Committee Has Done

At its first meeting the Committee did something, which few men who talk about bovine tuberculosis, have done. For nearly a solid day it waded through the various official documents, acts of Legislature and Congress, and rules and regulations covering the work.

At its next meeting it had present and spent the day in conference with Dr. Kieran, Federal Veterinarian in charge of tuberculosis eradication throughout the United States, Dr. Leonard, the Federal Agent assigned to New York State, Commissioner Pycke, of the New York State Department of Farms and Markets, and Director McLaury of the Bureau of Animal Industry. At this conference the Committee sought to draw out from the State and Federal officials

VOL. 111 May 19, 1923 No. 20

Support the Mullan-Gage Law

NO citizen of New York State or member of its Legislature can take any pride in the accomplishments, or lack of them, in the session just passed. It would have been much better and cheaper had it never met. Not in years has there been more political horse-play and less real achievement. Then to cap the climax, and to add insult to injury to the law-abiding citizens of the State, the Legislature at the last moment passed the bill repealing the Mullan-Gage Law. The responsibility is now on Governor Smith of determining whether or not New York State believes in cooperating with the national government in enforcing prohibition which is the law of the land.

Nearly all of the States have passed legislation supporting the Volstead Act, prohibiting the manufacture and sale of intoxicating liquors and providing cooperation between the State law enforcing machinery and the Federal authorities. The Mullan-Gage Law provided for such cooperation in New York State. About the only argument against the Mullan-Gage Law is the claim that its attempted enforcement by State and city officials and police led to much bribery and graft between the bootleggers and the law enforcement officers. Such an argument is absurd on its face because it is a confession that all State and city enforcement officers are dishonest and can be bribed.

The Eighteenth Amendment is a Federal law and a part of the United States Constitution, which Governor Smith and other public officials agreed to support when they took their oath of office. If the Governor does not veto this repeal bill, hundreds of bootleggers already indicted under the State law will be released. New York will by this repeal give open support and comfort to the criminal bootleggers, and we will have one of the worst situations from a law enforcing standpoint that has ever existed in America. In the words of the Utica "Observer," published at Utica, New York: "It throws the State open to a revel in lawlessness that has never been before approached. It will fill

the State with criminals who will flock here to open illicit traffic and make possible the opening of dives upon every corner."

The New York "World," which openly fought the Eighteenth Amendment both before and after it was passed, makes the following remark since the passage of the bill repealing the Mullan-Gage Law: "Congress imposed the Volstead Law upon the people of New York. Now let Congress provide for the enforcement of the Volstead Law." If South Carolina ever made any stronger statement than this for State rights and nullification before the Civil War, we never read it.

The Governor is to hold a hearing on the bill repealing the Mullan-Gage Law sometime during the week beginning May 20. If you agree with us that the repeal of this Law would be a sad disgrace to the people of New York State, we suggest that you write, or better still, telegraph the Governor immediately asking him to veto the repeal.

Home, Sweet Home

"HOME, SWEET HOME" celebrates its one hundredth anniversary this month. It was written by John Howard Payne, on the eighth of May, 1823. A New York newspaper in commenting on the song's anniversary said that no doubt a city audience hearing it in a theatre now for the first time would call it very mediocre. Maybe so, but if "Home, Sweet Home" is not a great ballad, then our sense of all that is beautiful in music and fine in sentiment is mediocre, too. This song, standing as a symbol of the home associations which are the best in all human relationships, has lived one hundred years in the hearts of hundreds of millions and it will continue to live when the high-toned operas or the wild jazzes which seem to please people so much now are long gone and forgotten.

"Home, Sweet Home" is particularly an American song because the American has been a pioneer and a wanderer; few of them have stayed in one spot for more than one generation, and this song more than any other has expressed the wanderer's bitter feelings of lonesomeness and homesickness. "Home, Sweet Home" has been sung by thousands of farm women, soul-starved for music and for associations with friends and relatives, of which the isolated business of farming had deprived them. "Home, Sweet Home" is the song of the farm boy hired out to a Yankee farmer, or lured by adventure to the great city only to find after all that "be it ever so humble there is no place like home." "Home, Sweet Home" is the song of the pioneer in his covered wagon with all of his friends and old associations left behind, and an unknown land and future ahead, and "Home, Sweet Home" is the song also of the boy soldier, separated from his family for the first time and almost dying with the nostalgia of homesickness.

There is a story of two great armies during the Civil War lying one summer evening on opposite sides of a Virginia river. As we remember the story, the fighting had ceased for the day and the men were resting. After a while, a Southern band began to play "Maryland, My Maryland," and as the band played, a few of the Confederate boys began to sing. Then regiment after regiment took up the song until the whole army had joined in.

Not to be outdone, a Union band began to play "Marching Through Georgia," and the soldiers joined in until the whole Union army was singing. When the Confederates had finished their song, they immediately started another one, "Dixie," and they were answered on the other side by "The Girl I Left Behind Me." Then the Southerners took up one by one some of the beautiful old plantation ballads, and each time they were an-

swered by the Union boys by the love and folk songs of the North.

Finally, after a lull, from the Southern encampment softly across the waters of the river came the beautiful and sad old strains of "Home, Sweet Home." Then the Union band began to play it, too, and as the bands played in unison, the boys from both North and South sang the greatest of all home songs together. As the great volume of song arose from the hearts of a hundred thousand men, they became again little boys, forgetting that they were bitter enemies and remembering only those loved folks waiting far away in Southern and Northern homes. They were little boys, called by the haunting melody to pleasant scenes of childhood days forever gone, to memories of mother, father, brothers and sisters now separated by death, time or distance; to memories of the pleasant home meal times, the long evenings together around the reading table and the warm wood fire—into which the horrors of war and the tragedy of separation had not yet come.

Just put the record on your phonograph, or get somebody to play the melody over softly for you on the piano, then close your eyes and picture the scenes that the words and music of "Home, Sweet Home" recall, and you will then know why it has lived a hundred years and will continue to live while folks hold the associations and memories of home as life's best treasures.

Pasture Crops

NO farmer would think of harvesting a crop of corn or oats until it is ripe. Good pasture is one of the most valuable crops, yet a majority of dairymen pay little attention to its improvement, and begin to harvest it too early by turning the cattle on it in the spring before the grasses have had a proper start. It is always a temptation to get the cattle out of the barn in the spring, particularly when the costs of feed are high, and returns for milk comparatively low. But it is a costly practice to yield to that temptation.

When they are turned out, the flow of milk too close cropping by feeding some hay at the can be kept up and the pasture saved from same time. The New Jersey State College of Agriculture says: "The food material in growing grass is manufactured by the green leaves and if the pasture is kept closely cropped, the leaf surface is decreased to such an extent that many of the roots die or are weakened through lack of nourishment. If the pastures are expected to grow and thrive, we must allow them to get a good start in the spring which will enable them to develop sufficient roots to carry them through the dry summer." Later in the summer when the pasture is most needed to keep up the flow of milk those that have been pastured too early are the first to turn brown and to become comparatively useless.

This year the cold season has greatly retarded the pastures in all Eastern States. In most sections they are at least two weeks late, and special care will have to be given by dairymen not to turn the cattle on them too early.

Quotations Worth While

Make one person happy each day and in forty years you have made 14,600 human beings happy for a little time at least.—

* * *

Honor is like an island, rugged and without a landing place; we can nevermore re-enter, when we are once outside of it.

* * *

There is no place more delightful than one's own fireside.—CICERO.

* * *

Mutual brotherhood means mutual service.—LYMAN ABBOTT.

The Present Crisis

By JAMES RUSSELL LOWELL

WHEN a deed is done for Freedom, through the
broad earth's aching breast
Runs a thrill of joy prophetic, trembling on from
east to west,
And the slave, where'er he cowers, feels the soul within him
climb
To the awful verge of manhood, as the energy sublime
Of a century bursts full-blossomed on the thorny stem of Time.
Through the walls of hut and palace shoots the instantaneous
throe,
When the travail of the Ages wrings earth's systems to and fro;
At the birth of each new Era, with a recognizing start,
Nation wildly looks at nation, standing with mute lips apart,
And glad Truth's yet mightier man-child leaps beneath the
Future's heart.

So the Evil's triumph sendeth, with a terror and a chill,
Under continent to continent, the sense of coming ill,
And the slave, where'er he cowers, feels his sympathies with God
In hot tear-drops ebbing earthward, to be drunk up by the sod,
Till a corpse crawls round un-
buried, delving in the nobler
clod.

For mankind are one in spirit,
and an instinct bears
along,
Round the earth's electric circle,
the swift flash of right or
wrong;
Whether conscious or uncon-
scious, yet Humanity's vast
frame
Through its ocean-sundered fi-
bres feels the gush of joy or
shame;—
In the gain or loss of one race all
the rest have equal claim.

Once to every man and nation comes the moment to decide,
In the strife of Truth with Falsehood, for the good or evil side;
Some great cause, God's new Messiah, offering each the bloom
or blight,
Parts the goats upon the left hand and the sheep upon the right,
And the choice goes by forever 'twixt that darkness and that
light.

Hast thou chosen, O my people, on whose party thou shalt stand,
Ere the Doom from its worn sandals shakes the dust against
our land?
Though the cause of Evil prosper, yet 'tis Truth alone is strong,
And, albeit she wander outcast now, I see around her throng
Troops of beautiful, tall angels, to enshield her from all wrong.

Backward look across the ages and the beacon-moments see,
That, like peaks of some sunk continent, jut through Oblivion's
sea;
Not an ear in court or market for the low foreboding cry
Of those Crises, God's stern winnowers, from whose feet
earth's chaff must fly;
Never shows the choice momentous till the judgment hath
passed by.

Careless seems the great Avenger; history's pages but record
One death-grapple in the darkness 'twixt old systems and the
Word;
Truth forever on the scaffold, Wrong forever on the throne,—
Yet that scaffold sways the future, and, behind the dim unknown,
Standeth God within the shadow, keeping watch above his own.

We see dimly in the Present what is small and what is great,
Slow of faith how weak an arm may turn the iron helm of fate,
But the soul is still oracular; amid the market's din,
List the ominous stern whisper from the Delphic cave within,—
"They enslave their children's children who make compromise
with sin."

Slavery, the earth-born Cyclops, fellest of the giant brood,
Sons of brutish Force and Darkness, who have drenched the
earth with blood,

Famished in his self-made desert, blinded by our purer day,
Gropes in yet unblasted regions for his miserable prey;—
Shall we guide his gory fingers where our helpless children
play?

Then to side with Truth is noble when we share her wretched
crust,
Ere her cause bring fame and profit, and 'tis prosperous to be
just;
Then it is the brave man chooses, while the coward stands aside,
Doubting in his abject spirit, till his Lord is crucified,
And the multitude make virtue of the faith they had denied.

Count me o'er earth's chosen heroes,—they were souls that
stood alone,
While the men they agonized for hurled the contumelious stone,
Stood serene, and down the future saw the golden beam
incline
To the side of perfect justice, mastered by their faith divine,
By one man's plain truth to manhood and to God's supreme
design.

By the light of burning heretics
Christ's bleeding feet I
track,
Toiling up new Calvaries ever
with the cross that turns
not back,
And these mounts of anguish
number how each generation
learned
One new word of that grand
Credo which in prophet-
hearts hath burned
Since the first man stood God-
conquered with his face to
heaven upturned.

For humanity sweeps onward:
where to-day the martyr
stands,

On the morrow crouches Judas with the silver in his hands;
Far in front the cross stands ready and the crackling fagots
burn,
While the hooting mob of yesterday in silent awe return
To glean up the scattered ashes into History's golden
urn.

'Tis as easy to be heroes as to sit the idle slaves
Of a legendary virtue carved upon our father's graves,
Worshippers of light ancestral make the present light a crime;—
Was the Mayflower launched by cowards, steered by men be-
hind their time?
Turn those tracks toward Past or Future, that make Plymouth
Rock sublime?

They were men of present valor, stalwart old iconoclasts,
Unconvinced by axe or gibbet that all virtue was the Past's;
But we make their truth our falsehood thinking that hath
made us free,
Hoarding it in mouldy parchments, while our tender spirits flee
The rude grasp of that great Impulse which drove them across
the sea.

They have rights who dare maintain them; we are traitors to
our sires,
Smothering in their holy ashes Freedom's new-lit altar-fires;
Shall we make their creed our jailer? Shall we, in our haste
to slay,
From the tombs of the old prophets steal the funeral lamps away
To light up the martyr-fagots round the prophets of to-day?

New occasions teach new duties; Time makes ancient good
uncouth;
They must upward still, and onward, who would keep abreast
of Truth;
Lo, before us gleam her camp-fires! we ourselves must Pil-
grims be,
Launch our Mayflower, and steer boldly through the desperate
winter sea,
Nor attempt the Future's portal with the Past's blood-rusted
key.

Read It Out Loud!

WE print the great poem by James Russell Lowell at
this time because the world to-day stands at the most
momentous cross-roads of its history. Although written
December 18, 1844, before the Civil War crisis, this poem
applies with even stronger force to the world's present
crisis. Never before have men been called upon to make
decisions of such far-reaching importance to future civili-
zation as now. The time is here when

"Once to every man and nation comes the moment
to decide
In the strife of truth with falsehood, for the good
or evil side."—The Editors.

New York Farm News

Farm Leaders Perfect Dairy Show Plans

THE World's Dairy Congress was given a decided push towards success by the big meeting of practically all farm leaders at Syracuse, on the evening of May 14. Members of both the New York State Conference Board of Farm Organizations and the Cooperative Council were present together with many other farm leaders, in addition to a large number of business men from Syracuse and elsewhere, who are cooperating to make the Dairy Show a success.

The leading address of the evening was made by Dr. E. V. McCollum, of Johns Hopkins University, celebrated the world over as the advocate of a larger consumption of milk. Another leading speaker was Senator Royal S. Copeland, formerly Commissioner of Health, of New York City. Other speakers who made short addresses included the leaders of nearly every State-wide farm organization. A temporary dairy show organization was perfected. Publicity and other plans were made to make the dairy show, to be held at Syracuse in October, a notable event in dairy history.

In the afternoon a joint meeting of the New York Conference Board of Farm Organizations was held with the New York State Cooperative Council organization. The recent repeal of the Mullan-Gage Law was given considerable discussion as were several other measures that were recently passed by the Legislature.

The chief feature of this meeting was an address by Senator Royal S. Copeland explaining both sides of the coal mining situation. He outlined both the arguments of the operators and those of the labor union, and gave the farm leaders present a very clear understanding of the complicated and much misunderstood coal strike which led to so much trouble and suffering during the past winter.

NORTHERN NEW YORK NOTES

The cold dry weather of the latter part of April has held back cultivation considerably. Right now a good warm rain followed by a period of sunshiny weather would be mighty helpful.

The maple sugar season which has just closed, was one of the poorest in several years. Only about 50 per cent of a normal crop was harvested, with syrup selling at \$1.50 to \$1.75 per gallon.

There is a marked shortage of farm labor this spring, although \$55 to \$60 a month with board is being freely offered. Sufficient help does not seem to be available even at that figure. In many cases acreage will necessarily have to be reduced in order that spring seeding may be finished on time. Farmers are looking forward to turning their stock out on pastures. Unless we get some better weather, pastures will not be in shape to stand grazing until the latter part of the month. Stock came through the winter in excellent condition. A good many farmers are purchasing tractors throughout this region, which helps out in a way to overcome the serious shortage of labor. —CHARLES L. STILES.

IN WESTERN NEW YORK

Ontario Co.—April was a month of dry cold winds which have been for most of the time out of the northwest. We had just two hot days in the month, on one of them the mercury went to 80 degrees in the shade. Grass is very backward in starting, no pasturage as yet. Coarse fodder will all be fed up. Those that fed steers are selling out at 8½ cents. Many are having bad luck with young lambs and pigs. Wheat that got a good start last fall looks good, otherwise it looks poor. —E. T. B.

Genesee Co.—Farm work in the townships of Batavia and Stafford is nearly two weeks behind time. Snow has covered the ground most of the time for the past two weeks. Farm labor is awfully scarce and high wages are being asked. It is said that there are three farms in the town of Byron that will lie idle this season on account

of the high cost of labor that they are paying for help and other expenses, there would be nothing left for the owners. —G. E. B.

FIFTY CENT WOOL FOR 1923

F. E. ROBERTSON

The New York State Sheep Growers' Cooperative Association has just sold 45,000 pounds of wool which was consigned to the early pool at prices ranging from 40 cents per pound for the burry and seedy rejects to 53 cents per pound for ¾ combing. In view of the fact that local buyers are offering from 35 to 45 cents for clips of ungraded wool it is evident that the growers can save money by marketing their own wool through their own cooperative association.

The association is now entering its fourth successful year of cooperative grading and marketing. All indications point to an increasing volume of wool to be handled by the association. Those who consigned to the early 1923 pool shipped an aggregate of 58,000 pounds, all of which has been sold except the Delaines and some choice quarter blood. Shipments to the main 1923 pool will be arriving during May, June and July. There seems to be a tendency to shear and consign wools earlier in the season than was the case a few years ago.

The Boston wool market quotations continue strong with no indications of any change up or down. The following prices represent the range of market values: Delaine, 55 @ 56 cents, ½ blood combing, 54 @ 55, ¾ blood combing, 53 @ 54, ¼ blood combing, 52 cents. It is plain to see therefore that "fifty cent" wool closely indicates wool values to-day.

The State association has been doing some missionary work in the counties of Warren and Essex where the sheep growers, while keeping good sheep, are sadly handicapped in the matter of finding a good market for their clips. Much more wool from these counties will be consigned to the association warehouse at Syracuse, than in previous years. Shipments are also coming from growers in Vermont and Pennsylvania.

SNOW IN CENTRAL NEW YORK MAY 10

The unusual cold spell that reminded the entire East of the severity of the past winter and which established a record for the season of the year for low temperature, was accompanied by snow in several parts of New York State. Tompkins County and other Central New York sections were treated to a blanket of snow on May 10.

NEW YORK HOLSTEIN ASSOCIATION SALE SUCCESSFUL

According to word from M. C. Bond, Secretary of the New York State Holstein Association, which held its annual spring sale at Earlville, May 8 and 9, the sale was very successful. There were approximately 300 breeders present to bid on the 125 head consigned to the sale. Actual buyers were present from five different States.

According to Mr. Bond, 48 heifers averaged over \$153 per head, while calves averaged over \$187. Two cows topped the sale at \$400 each, while several went for \$300. A snoker was held on the evening of the first day of the sale during which United States Department of Agriculture motion pictures were shown. The Earlville Board of Trade took care of the refreshments and the entertainment.

For Every Kind of Spraying

This handy sprayer fills the bill—sprays fruit trees, gardens, flowers, shrubs, vegetables, grapes, berries. For whitewashing poultry houses, cellars, fence posts, and trees—for spraying disinfectant, fly spray, carbolic in poultry houses and stables—for washing windows, automobiles and buggies.

SMITH BANNER
No. 22 COMPRESSED AIR SPRAYER

is made right—strong, efficient and handy—designed to do the work as it should be done. No effort at all to use it. A few strokes of the pump compresses air to discharge contents of the tank—carried on shoulder strap or by handle—handy nozzle, opens and cuts off instantly—throws long distance fine mist or coarse spray.

Ask your dealer to show you this sprayer—examine it—you will be surprised that it can be sold at so low a price. Don't accept a substitute—there are imitations, but only one No. 22 Banner—insist on getting the best—most hardware and implement dealers carry them—if yours does not, write us and we will see that you are supplied. Send for free catalog of complete line.

How Shall We Control TB?

(Continued from page 435)

being possible for him to get the full value of his animals, while the owner of ordinary cattle, unless appraisals are very careful, gets the full value of his cattle or even makes a little money on them.

Summed up, the opinion was that the present indemnity maximums were none too high, and that careful appraising would adapt them to cheaper cattle.

Free Testing Not Favored

Several representatives were present from counties where Boards of Supervisors had made appropriations to pay the salary of veterinarians to test cattle free of charge, yet not a representative defended free testing as a permanent proposition. Only one representative argued in favor of it at all, he stating that were it not for free testing in his county the men would not test.

On the contrary, a number of men from counties, both where the owners pay for the test and where the testing is done free, stated themselves to be very definitely of the opinion that there was little use to test the herd of a man who was not interested enough to pay for having the work done.

The consensus of opinion along constructive lines seemed to be that cattle owners should pay for their tests, but that they should pay their fees into county organizations and that these county organizations should pay the veterinarians doing the work.

A few months ago, had a similar meeting been called, it is very likely that there would have developed considerable criticism of the work of the appraisers, the men who set the values on reacting cattle on which indemnities are based. Apparently the efforts of Director McLaury along the line of more careful appraising have met with success because when question No. 4 was asked not a man present felt that the general run of appraisals were much out of the line of real cattle values.

Follow Up Essential and Neglected

The men present at the conference showed their familiarity with bovine tuberculosis eradication by agreeing without exception to the necessity of thorough cleaning up and disinfection of premises where reacting animals are found and the careful safeguarding of healthy herds with reference to the introduction of new animals.

To a man they agreed that work of this kind had never been adequate until county committees had taken hold of the problem and injected the necessary local supervision.

Even with county committees functioning, it was the feeling of those present that the tendency is to neglect cleaning up, first, because the owners of herds where cattle react do not generally realize the importance of it; second, because they do not know how to do it effectively; and third, because a large number of men are naturally so careless that they never will do the work correctly.

Discussion of how to remedy this serious situation seemed to bring out the idea that the only hope is through more education as to the necessity of the work, closer local supervision by breeders and veterinarians, and in the event of deliberate neglect by men under the accredited herd plan, refusing them retests.

Area Testing Challenged

As was expected by the Committee from the conflicting evidence which it had already heard relative to the methods to be used in eradicating tuberculosis, the conference developed considerable difference of opinion relative to the so-called area plan of testing. As the discussion developed, certain fundamentals were brought out on which the minds of both groups appeared to meet.

In the first place it was agreed that there should be no definite size of unit for area work, that a clean area might be as small as a few farms in a neighborhood, a township, or even a whole county, the size of areas being limited entirely by the interest of the cattle owners concerned and their willingness to eradicate the disease.

It was further agreed that the only people capable of determining area

limits are those who are on the ground; that is, the cattle owners of a county, and that it is exceedingly dangerous for outside officials to attempt to set up area testing.

It was further agreed that, for the best interests of the work, State and federal indemnity money should be used as generally throughout the counties of the State as there are interested cattle owners in the counties. In effect this would seem to the writer to mean that those present at the conference, while they believe in area work, had an entirely different conception of what constitutes an area than the popular one, and that what the representative cattle owners of the State really believe relative to area testing is that it is a development which follows the testing of individual herds, through the testing of herds in a neighborhood, then perhaps in a township and finally in a whole county.

There seemed to be no confidence in the results to be gained from the wholesale testing of cattle over a large area. This lack of confidence was due to the free test and perhaps due to the oppor-

tunity to dispose of inferior cattle at good prices and because every man tested but some did not clean up nor persist in the initial efforts by repeat testing.

The County Plans

Throughout all the discussion those present continually referred to their county organizations and it was easily discernable that some sort of a county organization whether a separate association composed of the men who have herds under the accredited herd plan of tuberculosis eradication, or committees of farm bureau associations, was considered desirable by all of those present.

As the Committee had already studied the various forms of county organization, and as it desired held in making up its mind as to the type best adapted to eradication work, the writer requested representatives of Tompkins, Cortland, and Madison counties, which counties have different plans, to briefly present these plans for discussion. Their different county plans will be discussed later.

New Jersey Cannery Crops Growers Plan Co-op

W. H. BULLOCK

CANNING crops growers in the central and southern part of New Jersey are moving toward a State cooperative association, the purpose being to bring about more effective production and distribution of the crop. Meetings earlier in the season provided for a committee which would assume leadership in bringing about a federation of cannery crops growers. No attempt will be made to have the State association in shape for decisive work this season, organization plans not as yet being sufficiently complete. During the past two years the cannery growers have been discussing the situation and through their committees, appointed as the outgrowth of such meetings, they have already some favorable relations with canners. The association in prospect will purpose to follow out the same line of effort.

The Jersey Fruit Growers' Cooperative Association by the addition of new members now has under its direction the sale of approximately 75 per cent of the summer apple crop in the State. The association recently became a member of the Federated Fruit and Vegetable Growers and the carlot sales will be handled by that distributing organization. The association itself will be handled by that distributing and through the New Jersey territory.

Rural dramatics have been popular in New Jersey this season, and many granges and other farm organizations have been staging plays. "Oak Farm" is one drama which has been widely played. Mock trials have also been well received. The Salem County Pomona Grange recently staged both events, drawing over 250 members and their friends to the gathering. The next meeting of the Salem Pomona comes at Friesburg, N. J., on July 11.

Although a number of bills designed to amend trespass regulations failed to receive determining action on the part of the Legislature, one measure proposed by the New Jersey Fish and Game Conservation League was passed by the Legislature. It removes somewhat the strict protection which farmers had under the old trespass measures by requiring that all land must be posted conspicuously on the corners of the property, along the roads or highways, on all border lines, and at each point where a stream enters or leaves. The requirement for written permit from owner or tenant of farm that is posted is still required. Under the old law fewer "no trespass" signs were needed. The maximum fine for trespass, however, is increased to \$500. The Fish and Game Conservation League has a standing offer of \$10 reward for the conviction of a person wilfully damaging the property while hunting or fishing.

Contracts for the growing of canning crops are now being drawn. Prices have not greatly changed from last year in most of the eastern territory. It is rumored that Heinz has agreed to pay the South Shore Association \$15 a ton for tomatoes, an increase of \$2.50 over last year. Campbell Soup expects to pay \$20 for both early and late, delivered.

Before You Invest, Investigate!

(Continued from page 434)

Broadway, you can avail yourself of information concerning any security offered you about which you are in doubt. In this connection you will find it permanently profitable to make a binding agreement with yourself, your family and your friends to always investigate before you invest, now that the legitimate business men of New York, are trying to help you, help yourself and prevent losses arising out of misrepresented, improperly termed "investments", which may be of assistance to you, if you will make it a fixed rule to look well before you lose and to take plenty of time to investigate before you invest.

Give a thought to Advertising

When is a cow a cow, and when is a cow a care?

Sounds like a catch question, but there's some real meat in it when you carve under the surface.

A cow is a cow when it's fat and healthy and yielding a profit to its owner. But when it's thin, run down and costing more to keep alive than it's worth—then a cow is a care. And then's the time to look through your copy of the *American Agriculturist* and other farm papers to find out how to get the cow to pay its board bill.

Again the advertisements step to the front and do their share to help the farmer.

There are advertisements of reliable cures for different ailments. Follow the directions and you increase the chances of having paying cows. Or possibly you will decide to try a different breed of cattle. You find advertisements telling the good points of the different breeds and where you can get them. So without very much trouble you can solve your cattle problems from the advertisements alone.

For the dairyman there are advertisements of all the equipment that he uses. A trip through the advertising columns of a good paper is equivalent to a trip through a store containing more than one make of each different product. You can learn all about each product, its advantages and uses, and its price. And infinitely less trouble than a trip to the nearest store; and more information gained.

On the receiving end there is no doubt that a dairyman or cattle raiser benefits by advertising. And when he comes to selling stock, the advertisements offer him a nearly unlimited and practically sure market for all he wishes to dispose of.

Advertising works two ways in every industry. It serves as a buying guide for equipment, supplies and stock. And then in the other direction it works as a whole force of busy salesmen helping the producer to market his product.

Every breed of cattle has its champions. And nearly every breed is backed by an association that extols its merits. Advertising is the natural medium that these associations turn to, to tell the buying public the advantages of their breed. And in no other way could the farmers learn so conveniently and extensively about the different kinds of cattle. Advertising is a big store, a force of salesmen and a school combined. It pays to advertise—it pays to give a thought to advertising—it pays to read the advertisements.

Advertising Manager

National Grange Will Come to Pennsylvania

MANY important organization plans and association gatherings are scheduled in Pennsylvania for the coming season. Among the most important are the State and National Grange meetings to be held next fall. The Pennsylvania State Grange at a recent executive meeting has decided to hold its annual session at Pittsburgh, Pa., in conjunction with the annual gathering of the National Grange, which comes to Pennsylvania for the first time in a quarter of a century. The meeting of the State Grange will commence on November 12, and will follow through until November 14, when the National Grange begins its regular 10-day session.

According to Master John McSparrin of the Pennsylvania State Grange, arrangements will be shortly under way for the largest Seventh Degree class that has ever come up for initiation at the annual meeting of the National Grange. With Pittsburgh centrally located to a large grange membership in the Eastern States and within easy call of the middle western granges an exceptionally large and important meeting is expected.

The fight is still on at Harrisburg to secure adequate appropriation for the Pennsylvania State College. The House recently received a bill asking for \$3,200,352 for maintenance of the college work and for various lines of research badly needed in the State and at the present time unsupported. Of the requested sum, \$500,000 would be for agricultural extension and \$90,000 for engineering and mining extension work. The appropriation in Pennsylvania is on a two-year basis, and provision must be made by the present Legislature for the period from July 1, 1923, to July 1, 1925. The amount requested for the summer sessions of 1923 and 1924 is \$71,040. The situation at Penn State has been so critical for lack of funds that the college authorities claim inability to support a freshman class next year unless the appropriations are granted.

Farmers of Lancaster County, Pa., which county boasts that 50 per cent of its farmers feed cattle every winter, are looking forward to the Third Annual Lancaster Fat Cattle Show, which will be held at the Lancaster stockyards June 6 and 7. As in previous shows the competition is open only to those animals which were purchased by farmers through the Lancaster stockyards. The animals entered must have been on feed prior to the close of the first week in March in order to be eligible for prizes.

The Holstein men in Luzerne County, Pa., recently formed a county organization to boost the breed and increase the reputation for breeding animals and milkers produced in the county. The Chester County Holstein men, who have had an active organization for sometime, have scheduled a county tour for May 24. The York County Holstein Breeders' Association, another organization active for the breed, is now organizing a calf club and to date has enrolled about 25 members. A cow-testing association and a county tour to give publicity to the breed are also contemplated.

The number of motor trucks found on Pennsylvania farms shows a rapid increase, according to the annual State census. The Pennsylvania State Department reports 21,791 motor trucks now on farms. The leading county is Luzerne with 1,476 trucks, closely followed by Alleghany, Berks and Schuylkill counties, each of which have over 1,100 trucks. The survey shows that 65 per cent of Pennsylvania farmers have motor vehicles.

Apparently Pennsylvania voters will have before them at some future election date, a proposed constitutional amendment concerning an \$8,000,000 bond issue for the Pennsylvania State College. A joint resolution to this effect has passed both houses of the Legislature. However, the measure must come up again for legislative approval in two years, and then go to the voters for their sanction.—W. H. B.

Oldest DE LAVAL SEPARATORS

24 Years of Use

Average

The most remarkable evidence, giving additional proof of the exceptional quality and durability of De Laval Cream Separators, was disclosed by the "Oldest Users Contest" which closed on April 7th. Thousands of old De Laval Separators from all parts of the North American continent were entered. We wish to thank all who participated in this contest for their splendid co-operation in securing the data, which gives an accurate idea of just how long a De Laval will last when properly cared for.

The average life of the "Oldest De Laval," all of which are still being used, was a little over 24 years. The oldest De Laval entered is 32 years old and is owned by Joseph Larocque of Lancaster, Ont., Canada.

In view of the fact that the average life of cream separators other than De Laval is about five years, it can readily be seen from such unquestionable proof that the De Laval is not only the best but four to five times cheaper than other cream separators—and, remember, the 1923 De Laval is better than ever, has over four times the capacity of these old machines, is greatly improved, costs less, and will last even longer.

The Prize Winners

States are first listed in alphabetical order, followed by the name of the winner, each of whom has received the prize of \$25, their address, and the age of the De Laval which won first place in that state:

Ala., R. M. Davis, Talladega, 24 yrs.; Ariz., L. L. Prouty, Casa Grande, 19 yrs.; Ark., Medlock Dairy Farm, Arkadelphia, 29 yrs.; Cal., B. M. Martin, Newark, 18 yrs.; Colo., M. Miller, Westcliffe, 24 yrs.; Conn., Mrs. E. Lanz, Rockville, 31 yrs.; Del., C. D. Lamborn, Newark, 28 yrs.; Fla., Mrs. S. R. Pyles, Ocala, 12 yrs.; Ga., C. L. Foster, Dalton, 23 yrs.; Ida., P. G. Fairman, Jerome, 20 yrs.; Ill., F. G. Palmer, Yorkville, 28 yrs.; Ind., F. Molter, Lawrenceburg, 28 yrs.; Ia., M. Wollrob, Kalona, 31 yrs.; Kans., D. W. Morrow, Blue Rapids, 30 yrs.; Ky., H. M. O'Nan, Springfield, 27 yrs.; La., P. H. Sitger, New Orleans, 12 yrs.; Me., R. C. Briggs, Freedom, 24 yrs.; Md., Mrs. E. Holbrook, Owings Mills, 24 yrs.; Mass., W. D. Smith, Buckland, 27 yrs.; Mich., F. Downs, Nashville, 24 yrs.; Minn., C. H. Brueshoff, Norwood, 29 yrs.; Miss., W. H. Reese, Sessums, 18 yrs.; Mo., L. M. Lortz, Carl Junction, 23 yrs.; Mont., M. E. Nelson, Flatwillow, 24 yrs.; Neb., I. C. Nichols, Miller, 22 yrs.; Nev., J. Huttman, Fallon, 17 yrs.; N. H., E. L. Jewett, Sullivan, 25 yrs.; N. J., M. H. Astle, Vineland, 30 yrs.; N. M., C. W. Jackard, Hayden, 20 yrs.; N. Y., Mrs. J. P. Morris, Olean, 30 yrs.; N. C., A. B. McAulay, Huntersville, 24 yrs.; N. D., Fred Jensen, Norma, 25 yrs.; Ohio, Lee Nash, Xenia, 29 yrs.; Okla., Lee Armstrong, Seiling, 20 yrs.; Ore., Clinkinheard Bros., Marshfield, 28 yrs.; Pa., M. Lazar, Sharpsville, 29 yrs.; R. I., A. F. Clark, Westerly, 28 yrs.; S. C., Mrs. J. E. McIver, Darlington, 18 yrs.; S. D., H. Moseman, White Lake, 27 yrs.; Tenn., D. B. Hancock, E. Chattanooga, 24 yrs.; Tex., Mrs. F. P. McClure, San Antonio, 22 yrs.; Utah, F. W. Cowley, Venice, 21 yrs.; Vt., Ashton Soule, St. Albans, 31 yrs.; Va., Mrs. G. Hylton, Floyd, 22 yrs.; Wash., M. Kintschi, Edwall, 23 yrs.; W. Va., J. W. Walker, Wellsburg, 27 yrs.; Wis., H. Petersen, Oconomowoc, 30 yrs.; Wyo., P. Catlin, Wheatland, 20 yrs.; Hawaii, H. Iten, Mt. View, 12 yrs.

The 1923 DeLaval is better than ever

As good as these old De Laval Separators are, the 1923 De Laval is still better. Naturally much has been learned in the design and manufacture of cream separators during the past 40 years, and purchasers of present-day machines reap the benefit of such experience.

Twenty-five years ago a De Laval Separator of 250 lbs. capacity per hour cost \$125—today one of the largest sized De Laval with 1000 lbs. or four times the capacity per hour, can be bought for approximately the same amount of money, and one of about the same capacity can be bought for approximately half. In addition it has many improvements in design and construction, is made of better materials, does better work, is easier to handle and care for, and will last even longer. This applies to all sizes of present-day De Laval.

If you are using an inferior or worn-out separator, you may be wasting enough butter-fat to pay for a new De Laval and not get it. You can buy a De Laval on such easy terms that it will pay for itself. See your De Laval Agent now or write us about getting a new one.

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

WANTED HOUSEKEEPER—By Protestant widower, farmer. Best of references required and expect to furnish same. **LOCK BOX 427**, Corning, N. Y.

CATTLE BREEDERS

Fecundity!

Fecundity, the ability to produce strong, healthy calves regularly, is essential to a profitable dairy cow.

FECUNDITY IN HOLSTEINS MEANS:

Full value from prepotent sires --

Assurance of regular herd increases year after year -- Extra profit from sale of surplus stock --

Regular freshenings and consequent increased milk production for the whole herd -- Larger annual net profits.

Let Us Tell You About Holsteins.

EXTENSION SERVICE, The Holstein-Friesian Association of America, 230 East Ohio Street, Chicago, Ill.

HOLSTEINS

Glista Heifer Calves

SIRE: Korndyke Pontiac Glista, No. 268342, a grandson of the great Cornell cow, Glista Ernestine with seven records of over 30 lbs. butter in 7 days. Best record 677.3 lbs. milk, 34.22 lbs. butter 7 days.

These calves are from high producing dams, most of which have good A. R. O. records. Price ranging from \$50 to \$75 according to record and breeding of dam. Herd is T. B. tested.

BRADLEY FULLER, Utica, N. Y.

FOR SALE GUERNSEYS—HOLSTEINS

Otsego Co. has 820 herds of cattle tuberculin tested and under Federal supervision, from which we purchase our supply.

We endeavor to have on hand 50 head of high-grade, high-producing cattle.

Hindsdale Farm, Springfield Center, N. Y.

HIGH-GRADE HOLSTEIN COWS fresh and close by large and heavy producers. Pure bred registered Holsteins all ages; your inquiry will receive our best attention. **Browncroft Farm** **McGRAW** **New York**

MALE HELP WANTED

SINGLE MAN—On dairy farm. Wages \$45 per month with board. **V. LIEB**, West Danby, N. Y.

AGENTS WANTED

AGENTS—Our soap and Toilet article plan is a wonder. Get our free samples case offer. **HO-RO-CO.**, 177 Locust St., St. Louis, Mo.

The Brown Mouse—By Herbert Quick

CHAPTER I

A MAIDEN'S "HUMPH!"

A FARM-HAND nodded in answer to a question asked him by Napoleon on the morning of Waterloo. The nod was false, or the emperor misunderstood—and Waterloo was lost. On the nod of a farm-hand rested the fate of Europe.

This story may not be so important as the battle of Waterloo—and it may be. I think that Napoleon was sure to lose to Wellington sooner or later, and therefore the words "fate of Europe" in the last paragraph should be understood as modified by "for a while." But this story may change the world permanently. We will not discuss that, if you please. What I am endeavoring to make plain is that this history would never have been written if a farmer's daughter had not said "Humph!" to her father's hired man.

Of course she never said it as it is printed. People never say "Humph!" in that way. She just closed her lips tight in the manner of people who have a great deal to say and prefer not to say it, and—I dislike to record this of a young lady who has been "off to school," but truthfulness compels—she grunted through her little nose the ordinary "Humph!" of conversational commerce, which was accepted at its face value by the farm-hand as an evidence of displeasure, disapproval, and even of contempt. Things then began to happen as they never would have done if the maiden hadn't "Humphed!" and this is a history of those happenings.

Jim brought from his day's work all the fragrances of next year's meadows. He had been feeding the crops. All things have opposite poles, and the scents of the farm are no exception to the rule. Just now, Jim Irwin possessed in his clothes and person the olfactory pole opposite to the new-mown hay, the fragrant butter and the scented breath of the lowing kine—perspiration and top-dressing.

He was not quite so keenly conscious of this as was Jennie Woodruff. Had he been so, the glimmer of her white dress on the bench under the basswood would not have drawn him back from the gate. He had come to the house to ask Colonel Woodruff about the farm work, and having received instructions to take a team and join in the road work next day, he had gone down the walk between the beds of four o'clocks and petunias to the lane. Turning to latch the gate, he saw through the dusk the white dress under the tree and drawn by the greatest attraction known in nature, had reentered the Woodruff grounds and strolled back.

A BRIEF hello betrayed old acquaintance, and that social equality which still persists in theory between the work people on the American farm and the family of the employer. A desultory murmur of voices ensued. Jim Irwin sat down on the bench—not too close, be it observed, to the white skirt. . . . There came into the voices a note of deeper earnestness, betokening something quite aside from the rippling of the course of true love running smoothly. In the man's voice was a tone of protest and pleading. . . .

"I know you are," said she; "but after all these years don't you think you should be at least *preparing* to be something more than that?"

"What can I do?" he pleaded. "I'm tied hand and foot. . . . I might have. . . ."

"You might have," said she, "but, Jim, you haven't. . . . and I don't see any prospects. . . ."

"I have been writing for the farm papers," said Jim; "but. . . ."

"But that doesn't get you anywhere, you know. . . . You're a great deal more able and intelligent than Ed—and see what a fine position he has in Chicago. . . ."

"There's mother, you know," said Jim gently.

"You can't do anything here," said Jennie. "You've been a farm-hand for fifteen years. . . . and you always will be unless you pull yourself loose. Even a girl can make a place for herself if she doesn't marry and leaves the farm. You're twenty-eight years old."

"It's all wrong!" said Jim gently. "The farm ought to be the place for the best sort of career—I love the soil!"

"I've been teaching for only two years, and they say I'll be nominated for county superintendent if I'll take it. Of course I won't—it seems silly—but if it were you, now, it would be a first step to a life that leads to something."

"Mother and I can live on my wages—and the garden and chickens and the cow," said Jim. "After I received my teacher's certificate, I tried to work out some way of doing the same thing on a country teacher's wages. I couldn't. It doesn't seem right."

JIM rose and after pacing back and forth sat down again, a little closer to Jennie. Jennie moved away to the extreme end of the bench, and the shrinking away of Jim as if he had been repelled by some sort of negative magnetism showed either sensitiveness or temper.

"It seems as if it ought to be possible," said Jim, "for a man to do work on the farm, or in the rural schools, that would make him a livelihood. If he is only a field-hand, it ought to be possible for him to save money and buy a farm."

"Pa's land is worth two hundred dollars an acre," said Jennie. "Six months of your wages for an acre—even if you lived on nothing."

"No," he assented, "it can't be done. And the other thing can't, either. There ought to be such conditions that a teacher could make a living."

"They do," said Jennie, "if they can live at home during vacations. I do."

"But a man teaching in the country ought to be able to marry."

"Marry!" said Jennie, rather unfeelingly, I think. "You marry!" Then after remaining silent for nearly a minute, she uttered the syllable—without the utterance of which this narrative would not have been written. "You marry! Humph!"

Jim Irwin rose from the bench tingling with the insult he found in her tone. They had been boy-and-girl sweethearts in the old days at the Woodruff schoolhouse down the road, and before the fateful time when Jennie went "off to school" and Jim began to support his mother. They had even kissed—and on Jim's side, lonely as was his life, cut off as it necessarily was from all companionship save that of his tiny home and his fellow-workers of the field, the tender little love-story was the sole romance of his life. Jennie's "Humph!" retired this romance from circulation, he felt. From another girl it would have been bad enough, but from Jennie Woodruff—and especially on that quiet summer night under the linden—it was insupportable.

"Good night," said Jim—simply because he could not trust himself to say more.

"Good night," replied Jennie, and sat for a long time wondering just how deeply she had unintentionally wounded the feelings of her father's field-hand; deciding that if he was driven from her forever, it would solve the problem of terminating that old childish love affair

which still persisted in occupying a suite of rooms all of its own in her memory; and finally repenting of the unpremeditated thrust which might easily have hurt too deeply so sensitive a man as Jim Irwin. But girls are not usually so made as to feel any very bitter remorse for their male victims, and so Jennie slept very well that night.

Great events, I find myself repeating, sometimes hinge on trivial things. Considered deeply, all those matters which we are wont to call great events are only the outward and visible results of occurrences in the minds and souls of people. Sir Walter Raleigh thought of laying his cloak under the feet of Queen Elizabeth as she passed over a mud-puddle, and all the rest of his career followed, as the effect of Sir Walter's mental attitude. Elias Howe thought of a machine for sewing, Eli Whitney of a machine for ginning cotton, George Stephenson of a tubular boiler for his locomotive engine, and Cyrus McCormick of a sickle-bar, and the world was changed by those thoughts, rather than by the machines themselves. As a man thinketh so is he; and as men think so is the world. Jim Irwin went home thinking of the "Humph!" of Jennie Woodruff—thinking with hot waves and cold waves running over his body, and swellings in his throat. Such thoughts centered upon his clubfoot made Lord Byron a great sardonic poet. That club foot set him apart from the world of boys and tortured him into a fury which lasted until he had lashed society with the whips of his scorn.

Jim Irwin was not clubfooted; far from it. He was bony and rugged and homely, with a big mouth, and wide ears, and a form stooped with labor. He had fine, lambent, gentle eyes which lighted up his face when he smiled, as Lincoln's illuminated his. He was not ugly. In fact, if that quality which fair ladies—if they are wise—prize far more than physical beauty, the quality called charm, can with propriety be ascribed to a field-hand who has just finished a day of the rather unfragrant labor to which I have referred, Jim Irwin possessed charm. That is why little Jennie Woodruff had asked him to help with her lessons, rather oftener than was necessary, in those old days in the Woodruff schoolhouse when Jennie wore her hair down her back.

BUT in spite of this homely charm of personality, Jim Irwin was set off from his fellows of the Woodruff neighborhood. He was different. In local parlance, he was an off ox. He failed to matriculate in the boy banditti which played cards in the haymows on rainy days, told stereotyped stories that smelled to heaven, raided melon patches and orchards, swore horribly like Sir Toby Belch, and played pool in the village saloon. He had always liked to read, and had piles of literature in his attic room which was good, because it was cheap. Very few people know that cheap literature is very likely to be good, because it is old and unprotected by copyright. He had Emerson,

Thoreau, a John B. Alden edition of Chambers' *Encyclopedia of English Literature*, some Franklin Square editions of standard poets in paper covers, and a few Ruskins and Carlyles—all read to rags. He talked the book English of these authors, mispronouncing many of the hard words, because he had never heard them pronounced by any one except himself, and had no standards of comparison. And he had piles of reports of the secretary of agriculture, college bulletins and publications of the various bureaus of the Department of Agriculture at Washington. In fact, he had a good library of publications which can be obtained gratis, or very cheaply—and he knew their contents. He had a personal philosophy, which while it had cost him the world in which his fellows lived, had given him one of his own, in which he moved as lonely as a cloud, and as untouched of the life about him.

HE seemed superior to the neighbor boys, and felt so; but this feeling was curiously mingled with a sense of degradation. By every test of common life, he was a failure. People despised a man who was so incontestably smarter than they, and yet could do no better with himself than to work in the fields alongside the tramps. Save for his mother and their cow and garden and flock of fowls and their wretched little rented house, he was a tramp himself.

His father had been no better. He had come into the neighborhood from nobody knows where, selling fruit trees, with a wife and baby in his old buggy—and had died suddenly, leaving the baby and widow, and nothing else save the horse and buggy. That horse and buggy were still on the Irwin books represented by Spot the cow—so persistent are the assets of cautious poverty. Mrs. Irwin had labored in kitchen and sewing room until Jim had been able to assume the breadwinner's burden—which he did about the time he finished the curriculum of the Woodruff District school. His duties, his mother, and his father's status as an outcast drove him in upon himself, and, at first, upon his school books which he mastered so easily and quickly as to become the star pupil of the Woodruff District school, and later upon Emerson, Thoreau, Ruskin and the poets, and the agricultural reports and bulletins.

All this degraded—or exalted—him to the position of an intellectual farm-hand, with a sense of superiority and a feeling of degradation. It made Jennie Woodruff's "Humph!" potent to keep him awake that night, and send him to the road work with Colonel Woodruff's team next morning with hot eyes and a hotter heart.

What was he anyhow? And what could he ever be? What was the use of his studies in farming practice, if he was always to be an underling whose sole duty was to carry out the crude ideas of his employers? And what chance was there for a farm-hand to become a farm owner, or even a farm renter, especially if he had a mother to support out of the twenty-five or thirty dollars of his monthly wages? None.

A man might rise in the spirit, but how about rising in the world?

Colonel Woodruff's gray perchers seemed to feel the unrest of their driver, for they fretted and actually executed a clumsy prance as Jim Irwin pulled them up at the end of the turnpike across Bronson's Slew—the said slew being a peat-marsh which annually offered the men of the Woodruff District the opportunity to hold the male equivalent of a sewing circle while working out their road taxes, with much conversational gain, and no great damage to the road.

In fact, Columbus Brown, the pathmaster, prided himself on the Bronson Slew Turnpike as his greatest triumph in road engineering. The work consisted in hauling, dragging and carrying gravel out on the low fill which carried the road across the marsh, and then watching it slowly settle until the next summer.

"Haul gravel from the east gravel bed, Jim," called Columbus Brown from the lowest spot in the middle of the

"You marry?" said Jennie, "Humph!"

Chicken Lice Vanish In Twenty-Four Hours

Amazing New Discovery Banishes Vermin Like Magic—Makes Fowls Grow and Lay More Eggs

Practical Poultryman Offers \$1 For Every Louse You Can Find

Lice, chiggers, fleas, mites, etc., probably steal one-third to one-half of the poultry raiser's profits by sucking the very life blood from the flock. But there is no longer any reason why you should suffer this loss since the perfection of a remarkable new mineral formula by science.

Not only does this wonderful method do away with the bother and trouble of greasing, dusting and spraying, but it practically assures doubling your profits because you get more eggs and fatter broilers.

The Lousy Chicken Loses You Money

poultry, say they will give a dollar for any louse you can find on their poultry since using Paratabs.

This wonderful mineral compound simply puts elements into the fowls' blood which the lice cannot stand, yet is warranted not to flavor the eggs or meat in any way.

The Healthy, Lice-Free Hen Doubles Your Profits

Over 150,000 poultry raisers have used this formula known as Paratabs with great success. Many say they would not think of doing without it.

Simply address a post card or letter to M. B. Smith, 3326 Coca Cola Bldg., Kansas City, Mo. Don't send any money at all. Mr. Smith will immediately send you two large \$1.00 packages (enough for a season) at a special introductory price of only \$1.00. Pay the postman only \$1.00 and postage. You can easily sell one package to a friend and thus get yours free. Try Paratabs 10 days. If the lice are not all gone, your hens laying more eggs, and strutting around full of life and pep—if for any reason you are not satisfied, simply say so and your money will be returned.

This is a special introductory offer good for only a short time and should be accepted at once, as a big bank says Mr. Smith does as he agrees, furthermore, your money is fully protected by ample bank deposits.

Lady Jewel, who laid 305 eggs in one year

Butter Making Good For Pin Money

Miss Van Rensselaer Recognized—Our Usual Attractive Dress Patterns

FARM women who make butter for private trade as I do, have sometimes been annoyed by having butter cloths returned mildewed, or else not returned at all, or they have heard over the phone just after making butter into rolls according to order, "Oh, Mrs. F., I've got company. Could you spare me a little more butter?" or "Mrs. F., John was away last week, so I've butter left on hand. Just send me two pounds instead of four."

I never could make a nice roll of butter, especially in hot weather. We tried packing it in small crocks, but these get cracked, are not returned promptly and my husband dislikes bothering with them in the auto. So I bought a pound print, the brick shape, and it has solved most of my troubles. It measures an accurate pound, so I need not weigh any more butter. Relief No. 1. I wrap the butter in paper, so no more greasy, mildewed cloths. Relief No. 2. I can add or subtract from a customer's order at a moment's notice without trouble. Relief No. 3. A store in town which refuses to handle country butter will take all the prints I have above my customers' needs. Relief No. 4.

Printing Butter is Real Fun

I have found that butter which is too soft to roll will print nicely. Why, printing butter is almost as much fun as making mud pies used to be!

The paper costs 35c per pound, but can be purchased a trifle cheaper by the thousand sheets. My print cost 35 cents. It has saved my buying a new butter scale. The neat, sanitary butter package has gained me new customers. I have a chance to furnish butter for a smart tea room some twenty miles away, and it will be called for at my door.

I do not have ice, but use water from the well to chill my cream before churning, and I wash my butter with the cold water while it is still in the grain. My customers pay me just what they would have to pay at the store. Most of our stores have a difference of ten cents between wholesale and retail price per pound. Through our butter customers, we have found a market for maple syrup, hams, berries, chickens, and other produce.

My mother bequeathed me some of my customers, but I really dreaded the whole process of butter-making until I learned to use a print. Some day I mean to own a butter worker. Since I salt my butter in the churn after washing it, and in cold weather print it at once almost, I do not dread working it. I moisten the salt, as it seems to go through faster and never grains on the butter. Washing the butter through two waters seems to eliminate the streaks of white that once troubled me.

When Sales Improve

Sales are usually best in summer. Butter is in extra demand during green corn season! I anticipate losing my tea-room customers when the weather becomes unpleasant for motoring. As yet I have never sold butter by parcel post. Our dairy is not model, as the men insist upon some Shorthorn cows in order to stock the farm. I won't churn for Shorthorns alone, so have two registered Jerseys. Sometimes I sell no butter, for "we are seven"; again, I have 20 to 30 pounds per week.

When my dairy becomes model I shall have enough cows so that I may be churning for five the year around. Most of my neighbors sell cream, so I could market my butter among them, but it is more satisfactory to market in town. Some of our stores will take good butter at an extra price and hold it for their best patrons.

Learn to make a superior article, then a very little salesmanship will do the rest.

ONE ON US:

Only a zero—yet it meant just the opposite of "nothing"! When it was accidentally dropped from the account of the recent conference of Home Bureau workers in New York, it changed the membership of that splendid organization from 30,104 women to 3,104. Quite a difference there!

Thank you Mrs. Brigden, for pointing

it out. We apologize. Next year, we hope we can make it 300,000—and we'll be careful of the O's!

MAYBE YOU LIVE AT THE "HUB"

The "center" of your state is not necessarily the largest city. New York, Philadelphia, Chicago, and many other

occupies almost entirely, and in Massachusetts, where Worcester covers that geographic point, are cities the exact center.

In New York, Madison County contains the central point, six miles southeast of Oneida, in New Jersey it is in Mercer County, five miles southeast of the State Capitol. In Pennsylvania, Center County has it, two and one-half miles southwest of Bellefonte.

So, perhaps some American Agriculturist boys or girls may live near these central points, all of which are in farming country. And some may even live in, or have visited South County in Northern Kansas, where the exact center of the United States is found.

The Brown Mouse

(Continued from page 443)

turnpike. "Take Newt here to help load."

Jim smiled his habitual slow, gentle smile at Newton Bronson, his helper. Newton was seventeen, undersized, tobacco-stained, profane and proud of the fact that he had once beaten his way from Des Moines to Faribault on freight trains. A source of anxiety to his father, and the subject of many predictions that he would come to no good end, Newton was out on the road work because he was likely to be of little use on the farm. Clearly, Newton was on the downward road in a double sense—and yet, Jim Irwin rather liked him.

"The fellers have put up a job on you, Jim," volunteered Newton, as they began filling the wagon with gravel.

"What sort of job?" asked Jim.

"They're nominating you for teacher," replied Newton.

"Since when has the position of teacher been an elective office?" asked Jim.

"Sure, it ain't elective," answered Newton. "But they say that with as many brains as you've got sloshing around loose in the neighborhood, you're a candidate that can break the deadlock in the school board."

(Continued next week)

Here is another order for patterns. The Clown Suit was a great success. I used two different colors, red and yellow.—Mrs. B. H. C., New York.

FOR STAY-AT-HOMES OF ALL AGES

SUCH a simple pretty little dress for the growing girl—and one she can grow in, too! This frock could be made in a morning for everyday wear, or with dainty material and ribbon bows, be used for parties and Sunday. No. 1738 comes in sizes 4, 7, 8 and 10 years. Price, 12c.

THE matronly figure looks well in the morning dress of long lines and No. 1685 is quite ideal both for appearance and comfort. It comes in sizes 36, 38, 40, 42, 44, 46, 48 and 50-inches bust measure and costs 12c. In a medium size, 1685 requires 4 yards of 36-inch material, with 1 yard contrasting and 3 yards binding.

IS it possible to have too many aprons? Not if they are homemade, for that sort wears longer and looks better than any ready-made could. No. 1637 is cut in sizes 36, 40, 44-inches bust measure. Size 36 requires 2½ yards of 36-inch material with 9½ yards of binding. Price, 12c.

To Order: Enclose correct amount (preferably stamps). Write name, address and numbers clearly, and send to Fashion Department, American Agriculturist, 461 Fourth Avenue, New York City.

The summer catalogue is ready and from its attractive front cover in colors to the back page, it contains fascinating designs for all the family. Only ten cents! Get one before they are all gone!

The Valley of the Giants

The End of Peter B. Kyne's Popular Serial

BRYCE glanced at his watch. "It's half after eleven," he said. "Guess I'll run up to the Giants and bring him home to luncheon."

He stepped into the Napier and drove away. Buck Ogilvy with sudden determination entered the office.

"Moira," he said abruptly, "your dad is back, and Bryce Cardigan has let him have his old job as woods-boss. And I'm here to announce that you're not going back to the woods to keep house for him. Understand? Now, look here, Moira. I've shilly-shallied around you for months, and I haven't gotten anywhere. To-day I'm going to ask you for the last time. Will you marry me?"

"I'm afraid I don't love you well enough to marry you," Moira pleaded. "I'm truly fond of you, but—"

"The last boat's gone," cried Mr. Ogilvy desperately. "I'm answered. Well, I'll not stick around here much longer, Moira. So I'll quit my job here and go back to my old game of rail-roading."

"Oh, you wouldn't quit a ten-thousand-dollar job," Moira cried, aghast. "I'd quit a million-dollar job. I'm desperate enough to go over to the mill and pick a fight with the big band-saw."

"But I don't want you to go, Mr. Ogilvy."

"Call me Buck," he commanded sharply.

"I don't want you to go, Buck," she repeated meekly. "I shall feel guilty, driving you out of a fine position."

"Then marry me and I'll stay."

"But suppose I don't love you the way you deserve—"

"Suppose!" Buck Ogilvy cried. "You're no longer certain of yourself. How dare you deny your love for me? Eh? Moira, I'll risk it."

Her eyes turned to him timidly, and for the first time he saw in their smoky depths a lambent flame. "I don't know," she quavered, "and it's a big responsibility in case—"

"Oh, the devil take the case!" he cried rapturously, and took her hands in his. "Do I improve with age, dear Moira?" he asked with boyish eagerness; then, before she could answer, he swept on, a tornado of love and pleading. And presently Moira was in his arms, and he was kissing her, and she was crying softly because—well, she wondered, and as she wondered, a quiet joy thrilled her in the knowledge that it did not seem at all impossible for her to grow, in time, absurdly fond of this wholesome red rascal.

"Oh, Buck, dear," she whispered, "I don't know, but perhaps I've loved you a little bit for a long time."

JOHN CARDIGAN was seated in his lumberjack's easy-chair as his son approached. His hat lay aside him; his chin was sunk on his breast, and his head was held a little to one side in a listening attitude; a vagrant little breeze rustled gently his fine, white hair. Bryce stooped over and shook him gently by the shoulder.

"Wake up, partner," he called cheerfully. But John Cardigan did not wake, and again his son shook him.

The old eyes opened, and John Cardigan smiled up at his boy. "Good son," he whispered. He closed his sightless eyes again. "I've been sitting here—waiting," he went on in the same gentle whisper. "No, not waiting for you, boy—waiting—"

His head fell over on his son's shoulder; his hand went groping for Bryce's. "Listen," he continued. "Can't you hear it—the Silence? I'll wait for you here, my son. Mother and I will wait together now. Look after old Mac and Moira—and Bill Dandy, who lost his leg—and—all the others, son. Sorry I can't wait to see the San Hedrin opened up, but—I've lived my life and loved my love. Ah, yes, I've been happy—just doing things—and—dreaming here among my Giants—and—"

He sighed gently. "Good son," he whispered again; his big body relaxed, and the great heart of the Argonaut was still. Bryce held him until the realization came to him that his father was no more.

"Good-bye, old John-partner!" he murmured. "You've escaped into the

light at last. We'll go home together now, but we'll come back again."

And with his father's body in his strong arms he departed from the little amphitheatre, walking lightly down the old skid-road to the waiting automobile. And two days later John Cardigan returned to rest forever with his lost mate among the Giants, himself at last an infinitesimal portion of that tremendous silence that is the diapason of the ages.

WHEN the funeral was over, Shirley and Bryce lingered until they found themselves alone beside the freshly turned earth. Through a rift in the great branches two hundred feet above, a patch of cerulean sky showed faintly; the sunlight fell like a broad golden shaft over the blossom-laden grave, and from the brown trunk of an adjacent tree a gray squirrel, a descendant, perhaps, of the gray squirrel that had been wont to rob Bryce's pockets of pine-nuts twenty years before, chirped at them inquiringly.

"He was a giant among men," said Bryce presently. "What a fitting place

LIVING WITH OUR CHILDREN

IN choosing toys for your children, or in teaching them games, remember the following age-classifications:

1-3 years, toys and games to develop muscles and senses.

3-6 years, to develop imagination.

6-11 years, to develop self-confidence.

11-16 years, to develop loyalty and fair play.

Toys to children are what tools are to grown men. They learn to use them and through the tools to use their own bodies and minds. Thought as to the right choice of toys is not time wasted on childish foolishness, but is constructive building for the man who will some day take his place in the community life.

Get the child's point of view; respect his tastes and property as you expect him to respect yours. Above all, play with him—not condescendingly, or half-heartedly, but in the true spirit of Froebel's great appeal "Come let us live with our children."

for him to lie!" He passed his arm around his wife's shoulders and drew her to him. "You made it possible, sweetheart."

She gazed up at him in adoration. And presently they left the Valley of the Giants to face the world together, strong in their faith to live their lives and love their loves, to dream their dreams and perchance when life should be done with and the hour of rest at hand, to surrender, sustained and comforted by the knowledge that those dreams had come true.

BUYING "ON TIME"

From personal experience we have learned the advantage of installment-plan buying. When one's income is small it often means that a much-needed article for the home must be gone without for a long time while the price is slowly saved. However, by choosing a good, reliable firm to deal with, in your home town or not, as you prefer, the desired goods may be purchased and paid for in monthly installments. Besides the advantage of possessing the article, there is the satisfaction of establishing one's credit.

If a reliable concern is chosen for your dealings, and you pay your installments promptly, there is no reason why you should not be one of those who benefit by this practical method of furnishing your home.

Like other things, moderation is the principle which makes "buying on time" successful. It is the abuse of the credit privilege instead of its use that has spoiled it for many people.—M. R.

Post Toasties improved CORN FLAKES

SERVE these golden flakes of toasted corn with cream or milk, and appetite says, "That's it!" No bother to prepare, no cooking—always ready, and delightful. A serving usually costs less than a cent.

There's nothing like these crisp, flavory flakes of toasted corn to charm the taste. There's energy-building nourishment in their goodness, too. Make sure you get Post Toasties—in the Yellow and Red package—worth asking for by name.

Reviewing the Latest Eastern Markets and Prices

BROILER MARKET GOOD

HERSCHEL H. JONES

THE demand continues active for spring broilers especially express shipments from nearby sections. There is an increasing proportion of broilers among the freight shipments of live poultry from the West, but the total supplies have not been so far in excess of demand. The fanciest large colored live broilers still bring 60c; average colored, 50 @ 55c; White Leghorn, large, 50c; white leghorn, average 40 @ 45c.

The demand for broilers for the Memorial Day holiday will be greater as this is one of the best periods of the year for marketing broilers. The small size broilers of 1 lb. and under sell at a decided discount and are in limited demand. The choice being for fancy large stock of 2 lbs. and over each.

There is little demand at present for heavy fowls. Ducks and geese are neglected except the Long Island spring ducks which have been selling in large quantities at 29 to 30c.

EGG MARKET WEAKER

Although top quotations for extra fancy hennery white eggs were about the same on Thursday of last week the general condition of the market, especially on average quality of nearby eggs was weaker. The supply of nearby white eggs was very plentiful and they moved slowly. The bulk of the nearby eggs sold at prices ranging from 30 to 33c with probably a larger proportion at around 30 @ 31c. Even at these prices trading was not particularly active.

Many egg shippers have asked the question recently as to why their returns are much lower than quotations, also as to why the New Jersey hennery white eggs would be quoted so much higher than other nearby hennery whites. This situation is due to the fact that a certain limited fastidious trade is willing to pay higher prices for their regular supply of fancy, selected eggs which they can buy without shopping around and taking any risk as to quality. The New Jersey extras bring higher prices because the eggs covered by the top quotation are selected to a uniform large size, perfect cleanliness, chalk white color, new laid quality and light colored yolks. Furthermore these eggs are in the market in sufficient quantities to provide a continuous source of supply under brands of reliable character all during the year and dealers become familiar with them and can fill their needs without spending time in picking out cases here and there around in the market.

Most of the nearby white eggs reach the market in small lots of irregular quality and lacking in the careful selection required by the more particular buyers. Even occasional lots that are of exceptional quality are not of this quality and are not on the market continuously.

When the market is heavily supplied with irregular qualities of eggs as at present, dealers must find other outlets than their regular trade for immediate consumption and whenever it becomes necessary to sell to buyers who candle and repack for storage, concessions must be made to make it worth while for the speculative buyer. Such buyers will buy in lots of 100 or 200 at a time at a round price which may be more than the value of some of the eggs and less than the value of others.

The highest prices are paid only for eggs which are very closely selected out of fairly large production and this selection involves expense in both labor and rejections. Quotations at best are merely an attempt to represent the market and report on a general way in which sales are made. The fact that eggs of a given quality are quoted at a given price does not mean that they can on that day be sold in unlimited quantities at that price.

Buyers for storage are much more conservative this year than last, because of the heavy loss last year due to the excess supplies in storage. It is to be expected that the quantities of eggs put into storage this year will be less than last year unless prices drop to very much lower level. On May 10,

there were reported on hand in the four largest markets of the country 2,023,240 of eggs compared with 2,835,961 at this time last year. The total receipts of eggs at New York last week were approximately the same as the previous week and considerable in excess of the receipts in the corresponding week last year.

BUTTER MARKET STRONGER

Creamery butter advanced still higher last week by $\frac{3}{4}$ c on high score and $\frac{1}{4}$ c on extras, 92 score. The receipts up to and including Thursday last week were about 5,000 packages short of the previous week which reduced the supply below the consumptive requirements and made it necessary to draw on the very moderate reserve stocks. This caused a very active and strong market for all fresh receipts with trading mostly at 44c per lb. for creamery extras and a few favorite brands selling at a fraction above 44c.

most old potatoes, the buyers are turning their attention to new and these are selling from \$7 to \$7.25 per bbl. on the dock.

Potatoes from the West are coming in sprouted, spongy and some are showing rot. Stock of this kind has a bad effect on prices and tends to keep them low. Furthermore, the stock in storage is larger than at any time this season.

The total carlot shipments of the 1922 crop up to May 5 were 234,279 cars, compared with total of 226,651 up to May 6 last year, and a total of 238,288 for all of last season. Apparently the carlot shipments by the end of this season will exceed by quite a large figure the total shipments of last year.

HAY PRICES STEADY

Top grades of hay in the New York markets held steady last week, but toward the close of the week there was a tendency toward lower prices.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on May 10:

Eggs, Nearbys (cents per dozen)

Hogs, Yorkers.....	8 @ 8 1/2	8 1/2 @ 8 3/4

Continued cold weather has delayed expected increase in butter production. Shipments are coming in from the West by express and two cars of Canadian were due the end of the week. Some additional Danish butter is expected this week. In general it may be said that the butter market is in a very healthy condition and promises to continue so. There was an extreme shortage of unsalted butter last week and premiums as high as 6 @ 7c above quotations were paid in some instances.

CHEESE PRICES STEADY

In spite of an increase in receipts of cheese last week, the prices continued steady, with an average run: State whole milk flats, fresh, selling at 22c per lb. A considerable increase in production last week was reported in Wisconsin and it is expected that Wisconsin primary market prices will decline somewhat in the next few days. The cold storage season has hardly begun as yet and the market continues in very healthy condition.

DRIED APPLES NOT ACTIVE

There is practically no market for dried apples at New York just now. Prime apples for early shipment are being held, up-State at about 9 1/4 to 9 1/2 lb. f.o.b. Prices quoted New York: Prime, 9 1/2 @ 10 1/4c; choice, 10 1/4 @ 11 1/4c; fancy, 11 1/4 @ 12 1/4c lb.

POTATO MARKET QUIET

Receipts of old potatoes in the New York freight yards were relatively light last week, but the demand fell off considerably. Consequently prices were low and the movement dull. States sold at from \$2.75 per 150-lb. sack for the best, to as low as \$2 for poorest in the wholesale markets.

Because of the inferior quality of

Staples were buying only from hand to mouth. Shipments were increasing as a result of issuing of new permits, but no hay was received by boat. Prices at Brooklyn terminals were \$1 lower than at Manhattan on top grades and \$2 lower per ton on lower grades.

LIVE CALVES ADVANCE

At the end of last week there was a stronger demand for live calves and the wholesale price advanced \$1 per cwt., making the top quotations on prime veal, live, \$13.50. Medium to good sold at 8 to 11c and culls 6 to 8c per lb. The market was stronger for lambs, State spring lambs of best quality bringing 14 to 17c per lb.; medium to good, clipped, 11 to 14c; fair, 10c, and culls, 8 to 10c. Hogs were weak, Yorkers selling \$8.50 to \$8.80 on May 11.

DRESSED CALVES DULL

Trade was slow on country dressed calves last week and prices were barely steady, except for finest veals which are scarce and sell readily. Wholesale prices of dressed calves during the week held at around the following per lb.; choice, 16 @ 17c, prime, 13 @ 15c, good, 10 @ 12c, common, 6 @ 9c. Very few sales above 16c.

Dressed lamb receipts were light and sold slowly at range of \$3 @ \$9 each, with a few heavy at \$9.50 to \$10. Dressed sheep sold at a variety of prices not exceeding \$4 each.

MAPLE SYRUP SELLS SLOWLY

In the New York wholesale markets there was very little selling of maple syrup shipped on consignment last week. Prices on pure maple in gallon cans, wholesale, varied from \$1.90 to \$2.35, but trade quotation was \$2 per

gallon. Supply of maple sugar light, quoted in lb. cakes at 25 to 30c. Quantities of very dark poor-quality sugar from Vermont and Canada have been sold at around 20c lb. in blocks and sacks. Uniform quality dark sugar made from filtered syrup and not burnt will bring from 21 to 24c lb., depending on volume of sales and purity.

FURTHER DECLINE IN FEEDS

With the exception of gluten feed, which advanced slightly, there were further declines in most feedstuffs last week. Trading was limited. Wholesale quotations on carlots, in 100-lb. sacks, Buffalo rate basis, per ton on May 10, were:

Gluten feed, \$41.05; cottonseed meal, \$44.80; oil meal, \$39; standard spring bran, \$34; hard winter bran, \$34.50; standard spring middlings, \$34.50; choice flour middlings, \$37; white hominy, \$35.80. Feed grains per bushel, No. 2 yellow corn, 92c; No. 2 white oats, 53 1/4c; No. 3 white oats, 51 1/4c; barley feed, 74 @ 78c; No. 2 rye, 89c.

CASH GRAINS AT NEW YORK

Cash grain quotations May 11 at New York were as follows:

Wheat, No. 2 \$1.47; No. 2 hard winter, \$1.33 1/2; corn, No. 2 yellow, \$1.00 1/4; No. 2 mixed, 99 3/4; oats, No. 2 white, 55 1/2 @ 56c; No. 3 white, 54 @ 54 1/2c; rye, c. i. f. export, 90c.

Chicago—No. 2 white corn, 81 1/4 @ 81 1/2c; No. 2 yellow corn, 82 @ 82 1/4c; oats, No. 2 white, 46 1/2 @ 47c; No. 3 white, 45 1/2 @ 47c; rye, 77 1/2 @ 77 3/4c; barley, 65 @ 68c.

CRANE
SILOS

Giants in Strength

When you build a new silo or rebuild your old one, make it a Craine—the strongest as well as handsomest silo made. Its three wall construction gives perfect silage protection. Outside the wall of upright staves is an air-tight, water-proof, frost-defying inner wall of Silafelt. Outside of both is the spiral Crainelox covering, of giant strength—no hoops, lugs, weak spots, repairs, but permanent protection for every inch of wall.

You can rebuild an old stave silo into a Craine, at half the cost of a new silo.

Write for beautifully illustrated catalog and special discount on early orders. Agents wanted.

McCormick-Deering Primrose BALL-BEARING Cream Separators

PPRIMROSE Cream Separators have been making a good name for themselves in all the dairying sections of the country. Their good work is usually taken for granted, but if you will turn in wherever you see the sign "Primrose Cream Separator Used on This Farm," and make inquiries, you will find liberal praise for the Primrose. Everywhere is proof of close skimming, long wear, and easy operation. Read this evidence:

Mr. C. W. Coon, Colesburg, Ia., Feb. 26, 1923.
McCormick-Deering Dealer, Colesburg, Ia.

Dear Sir:—You will no doubt be interested in knowing about the Primrose Cream Separator which you sold me 5 years ago and is today giving such splendid satisfaction.

I just returned from the Colesburg creamery and was told that my cream test was the highest in a year's average over the 300 other patrons bringing their cream to this station. The cream test averaged 44% during the year 1922 which is 3% higher than the next highest average test.

At the same time our skim milk test was less than 1-100 of 1%, so we were sure that the Primrose was getting all the cream.

The repair expense on this Primrose separator has been only \$1.50. Anybody looking for a close-skimming, economical cream separator does well to buy a Primrose—for it's a machine that can't be beat. Yours very truly, [Signed] J. W. Platt & Son.

THAT is the sort of work the Primrose has been doing for farmers. See the note at left also. Now, with ball bearings and other improvements, the McCormick-Deering Primrose Cream Separator is all the more qualified to save cream and money and time for new owners. Made in 5 sizes: hand and power operated. The McCormick-Deering dealer will show you this ball-bearing machine.

How Federal Land Banks Help Farmers—By Jared Van Wagenen, Jr.

The American Farmer and the Grange

A Radio Message From the New York State Master

NEW YORK State Grange on this its Fiftieth Anniversary year, extends through the medium of American Agriculturist's farm radio program its greetings to all people interested in the development of agriculture and in the welfare and prosperity of the people living on the farms.

Following the Civil War, the President of the United States, realizing the chaotic conditions of agriculture, particularly in the South, appointed O. H. Kelley, a Minnesota farmer, who had been in the Department of Agriculture at Washington, to make a study of the agricultural conditions and report with recommendations as to what could or should be done to revive, develop and protect the agriculture of the country. In making this study Mr. Kelley found no fraternal organization among farmers, developing a brotherly fraternal spirit. He became convinced, therefore, that first of all agriculture needed such an organization of the people living on the farms that they might, not only through cooperation, receive a greater share of the returns from the sale of the products of their labor, but also to give them greater educational and social opportunities. This acquaintance and friendship was necessary to develop a fraternal spirit, without which no cooperative efforts will long succeed.

Organized in 1868

With this vision Mr. Kelley, and a few others whom he had interested along these lines, organized the Grange on December 4, 1868, in Washington, D. C. In 1873 the Grange in New York State had grown sufficiently strong to organize the New York State Grange, which functions through delegates from the local subordinate Granges in this State. The Grange, therefore, is the oldest active large organization of farmers in New York State, now having a membership of over 140,000 farm men, women and children over 14 years of age. Juvenile Granges are organized for those between the ages of 5 and 14 years.

A Membership of One Million

The Grange is organized in 36 States in the Union with a total membership of nearly one million. The State Granges pyramid their efforts through the National Grange, which functions through delegates from the State Granges.

The Grange, true to the characteristics of the farm people, has been conservative in its policies. It recognizes no North, no South, no East, no West. It is non-sectarian and non-partisan, the fundamental principles being to promote the good of the Order, our country and mankind, our motto being "In essentials, unity; in non-essentials, liberty; in all things, charity." From the fact that it has been true to these principles it has lived, grown, and prospered.

The Grange points with pride to the secur-

By ALBERT MANNING

ing of the enactment of such laws as the rural mail delivery; the parcel post; the organization of the United States Department of Agriculture; State departments of agriculture; the recognition of agriculture by the establishment of a Secretary of Agriculture in the President's Cabinet; the development of agricultural colleges and experiment stations; the protection of the great dairy interests of our country from unfair competition and the consumer from being deceived in purchasing adulterated substitute dairy products, such as oleomargarine and filled milk.

Active in Legislation

The Grange helped secure the passage of Federal and State laws permitting the farmers to collectively bargain and sell their prod-

Mr. Manning's Grange Message

ALBERT MANNING, whose talk on this page was broadcast from WEAF on May 23, at 6.30 standard time, needs no introduction to eastern farmers. Whether he talks of the Dairy-men's League Cooperative Association, of which he is secretary, or of the Grange, of which he is New York State master, he knows whereof he speaks. We are sure, therefore, that whether or not you are a Granger, you will like Mr. Manning's message on the Grange, which is one of the largest and finest of farm organizations.—The Editors.

ucts, thus bringing them nearer to the consumer, to the financial advantage of both producer and consumer.

In years past it was frequently said that the farmers could not stick together. During the past few years this statement has been proven false. This ability to stick together and collectively market their products is undoubtedly due in a large measure to the discipline, fraternal spirit, and confidence which has been developed among our farm people in meeting together week after week, month after month, year after year, in such an organization as the Grange.

Aided in Organizing the League

The Grange is proud of the part it has played in assisting in the organization of such cooperative associations as the Dairy-men's League with its 70,000 milk producers, advertising and selling its milk, butter, cheese, ice cream, evaporated milk, etc., in the world-wide markets, under its own brand name, "Dairylea." In addition to the Dairy-men's League there are the fruit growers, the potato growers, the wool growers, and several other groups organized around their particular products.

Back of the G. L. F. in New York

The Grange also was one of the leading organizations which organized the purchasing agency called the Cooperative Grange League Federation Exchange, Inc., through which the farmers can collectively pool their purchases of necessary supplies. In this effort the Dairy-men's League and the Farm Bureaus also particularly assisted.

One of the outstanding constructive pieces of work around which the Grange is center-

ing its activities this year is the rural school. As a culmination of a three years' study by the Committee of 21 of rural school conditions in New York State, a bill was introduced in the last State Legislature, which provided the details for carrying out the recommendations made by the investigating committee.

In Support of Rural School Bill

Legislation on this bill has been deferred until the next session, for the purpose of giving the rural people more time to carefully consider this rural school bill. The great aim in preparing these amendments to our rural school law has been to give the greatest degree of local control possible to a comprehensive, State-wide system and to make it possible to extend to every boy and girl not only the opportunities of our common schools,

but also making possible that high school opportunities might be provided near at hand and avoid the necessities of sending boys and girls away from home for their high school education. At the same time by equalizing the tax rate and readjusting the State aid, avoid increasing school taxes upon the farms.

This briefly in part is a story of the Grange and its efforts to promote a better agriculture, to develop a better manhood and womanhood among ourselves, and to make a happier, more cultured, and prosperous agricultural people.

The Unreliable Promoter

REFERRING to your editorial on Page 136 entitled "Take Time to be Sure," I would suggest that this is the strong point of the promoter of questionable propositions. He plans to get his victim secured before he has time to think.

A number of years ago a smooth tongued promoter of a cooperative creamery visited this part of West Virginia. He was in a great hurry, did not have time to talk long with the people, but just explained his proposition to his intended victim and if there was any hesitancy on the part of the other party he put up the proposition that it is now or never. He had the farmers in a community bound up for \$6,000 to have a creamery built and equipped before they hardly had time to think. Of course, the work was done, but it was a business misplaced as the people knew nothing of the creamery business. Their cattle were of the beef type rather than dairy. They did not have one fourth enough cows to warrant the building of a creamery and, of course, the investment was a load as the creamery was a complete failure. Another community got off better. They gave the promoter 10% cash on the stock, to quit and not build the creamery.

It seems to be the nature of people to fall easy victims to strangers and to turn down good business propositions offered by people whom they know to be honest.—A. J. LEGG, W. Va.

How Federal Land Banks Help Farmers

One Answer to the Need for a Dependable Source of Farm Financing

THERE is no doubt that changing economic conditions in the country is compelling the farmer to look toward some of the newer systems that afford credit to the man on the land. The Federal Land Bank is organized under a law which was approved by President Wilson in July, 1916. The Act grew out of many years of discussion and agitation looking toward a more comprehensive credit system for farmers. To a great extent it was modeled upon the experience of Europe where—especially in Denmark—somewhat similar institutions had been functioning for many years.

It should be recognized that the theory of the organization of the Federal Land Bank is to some extent altruistic. Students of farm economics—more perhaps, than the actual farmers themselves—had long insisted that when the farmer sought a loan he did not have the same facilities or receive the same consideration that was accorded to other industrial classes, although I understand the bankers admit that in proportion to the security he has to offer the farmer is a relatively small borrower.

A Case of Who is Borrowing

A great industrial corporation or railroad system decides that it wishes to borrow a million or several million dollars and it announces that a bond issue will be sold and wide publicity is given to the fact. In some cases if the security and terms seem favorable the demand will be so eager that the entire issue of many millions will be sold within an hour or two after the books are open to receive subscriptions. "Receiving subscriptions" seems to be the official term for borrowing money by selling bonds. Now a hundred million dollar bond issue against the property of some enormous corporation is, in no real essential, different from the procedure of Mr. Jones and wife who wish to place a mortgage of \$2,000 on their hundred acres of land with buildings. But if Jones lives in the eastern States at least, the village banker will hardly be interested and unless he has a well-to-do neighbor who happens to be looking for an opportunity to invest a little money, he will hardly know how to go about the task of finding someone to loan him this sum on what is really the very highest class security.

Strictly a Business Transaction

In talking with New York State farmers I do not get the impression that the local banks have discriminated against them as a class. As a matter of fact, banks need borrowers and indeed must have them if their business is to be profitable. The loaning of money to a man with good credit is not solely a favor on the part of the bank, but it is a business transaction which ought to be advantageous to both parties. In the matter of small temporary loans the country bank has

By JARED VAN WAGENEN, JR.

generally extended to the farmer the same consideration and courtesy that was shown to, say, the village grocer, but in the East the bankers almost universally fought shy of farm mortgages. In some ways they are sound in this position because a farm mortgage can hardly be regarded as a quick asset.

Then, too, there is another factor that has come into the case since the days of our rather hectic Liberty Loan "drives." I feel that up to that time each rural community had money enough to finance its own requirements. Nobody had much money. Most gener-

Farm Credit Information

WHAT about all this talk about credit for farmers? Recently we asked Mr. Van Wageningen to go up to the Federal Land Bank at Springfield, Massachusetts, and get the facts as to how the Federal Land Bank helps farmers with their mortgages.

On this page is what Mr. Van Wageningen found, written in his usual interesting and readable style. You cannot read this article without having a very clear understanding of just how the Federal Land Bank works and how you should go about it to borrow money from the bank on a mortgage.

Later we will have other articles on other features of farm credit, including information about the new credit legislation passed the last Congress.—The Editors.

ally the savings of long years of thrifty, forehanded farmers was represented by saving bank deposits and by local farm mortgages. Then came our great war time campaign for funds on the part of the Government and under the stress of patriotic appeal together with the impulse of sound business judgment about all of this floating rural capital was safely locked up in the world's premier security—Uncle Sam's promise to pay. These same bond campaigns also taught the people that there were many other ways of investing money—some of them mighty poor ones.

One Reason for the Land Bank

In any case the rural districts were pretty well sucked dry of floating capital and the local money lender having entrusted about all his savings to the Government at Washington is no longer able to finance Jones when he comes across lots to see him. I am sure that this is exactly what has taken place and that is one reason why some institution like the Federal Land Bank is more necessary than of old.

I suppose that almost every farm community has had its local farmer-financier and let it be noted in passing that only rarely was there a local Shylock. Many of these old mortgages included considerations of neighborliness, personal friendship and not infrequently sympathy; and forbearance and consideration were stretched to the limit. It was fine—this human, personal relationship.

Our County had once a man—dead now for more than a generation—who was a remarkable example of the rural financier. I know of no reason why I should not give his true name—"Joe" Brown. Only the other day I passed the little white "story and a half" frame house on a little street of the hamlet where he lived. He was long recognized as the richest man in our County, having, it was said, something like \$300,000—a vast sum in that day or even now among farm people. Practically he recognized only one form of investment—local farm mortgages. He may have been narrow and penurious—miserly, if you will, "but he was not hard—rather a gentle, kindly, merciful man.

He held scores of mortgages all over northern Schoharie County and was a community banker in every thing save name.

Doubtless many envied him his wealth, but it is remembered concerning him that almost never did he foreclose a claim or seek collection through the courts.

A Man of Mercy

He was accustomed to instruct hard-pressed men to "keep enough to pay the taxes and make your family comfortable and if there is anything left over, bring it to me." He was an ancient man when he at length died near the close of the long period of lean years that followed 1870. It was said that his estate was much smaller than it would have been 20 years before because there was so much unpaid interest in arrears and so many farms where the decline in land values had largely wiped out the original equity. I doubt not that when Joe Brown shall answer "Here" and stand to plead at the bar of the Great Assize, it will be found written in the Book that in very many cases he had, in the phrase of old "Micah," "done justice and loved Mercy" and dealt with the affairs of simple men in kindly ways.

Well, his career ended more than a generation ago. If he was living to-day I feel sure that he would have made the discovery that there were superabundant opportunities to buy securities of all sorts, including a long list ranging from United States Government Bonds down through State and city and township and even local school districts, the returns from which are free of all income taxes and are also safer and freer from annoyance and vexation than farm mortgages. In a word he would not now serve the community as he did then.

A Need for Dependable Farm Financing

There is surely a growing need in the farm country for an accessible and dependable source of farm financing. The Federal Land Bank was established primarily to meet this need.

I have done an occasional job of farm appraisal for the Land Bank ever since its

VOL. 111 May 26, 1923 No. 21

In Memory of '61

THE famous scythe tree, a picture of which is on our cover page, is the finest monument we know to all those country boys who left plows in the furrow and scythes in the trees to answer Lincoln's call for volunteers.

In 1861, James Johnson of Waterloo, New York, came in from the hay field, hung his scythe in this tree, then a sapling, and told his parents to leave it there until he returned. He then enlisted; and was killed in 1864.

At the present time, only about six inches of the scythe blade protrudes from the side of the tree. You can see it in the picture on the right side of the tree, near the eaves of the barn.

No Memorial Day address or editorial speaks more eloquently of the spirit of the American farmer in times of crisis than does this silent old tool of the hayfield which has waited for sixty-two years for the return of the farmer soldier boy who put it there.

Organization and the Dairy Show

EVEN ten years ago it would have been impossible to have held as large and as successful a farm meeting as the one at Syracuse, May 14, to make plans and pledge support to the World's Dairy Congress and National Dairy Show which is to be held on the State Fair Grounds next October. The enthusiasm of the large representative attendance, which came from eleven States and from nearly every agricultural county in New York, assures the success of the Dairy Show; and the success of the Dairy Show will mean much to the future welfare of eastern dairymen.

The Dairy Show plans got off to a big start because agriculture is so well organized that it was possible to bring all the machinery of organization to bear to make this preliminary meeting a success. Fifteen State-wide organizations from New York State alone were represented. As usual when anything worth while is to be done in New York State, the county farm bureau

agents had a hand in it. Mr. M. C. Burritt, vice extension director of the New York State College of Agriculture, put all of the vast organized extension machinery of the college at work, chiefly through the county agents, to bring this meeting to the attention of leading farmers in every county. The county agents got busy and many of them came to Syracuse on the 14th with delegations of farmers, all prepared to pledge their support and do their part to boost the dairy cow through the coming Dairy Show.

As we looked over the audience of 450 men, so representative of eastern agriculture, we were again impressed with the fact that if you give farmers time, they will work out most of their own problems and bring about a new day in agriculture through cooperation.

Governor Smith's Crisis

GOVERNOR SMITH is facing one of the most important decisions in his career. Shall he approve or veto the bill repealing the Mullan-Gage Law? Political "wiseacres" are prophesying on the one hand that he will listen to the wets and sign the bill. Others are saying that if he has national political ambitions, he will veto the bill.

Those of us who have watched Governor Smith's political career feel confident that he will follow the dictates of his conscience in this most important crisis, and do the right thing—namely—veto the bill repealing the Mullan-Gage Law.

Standardizing Farm Machinery

HOW many, many times farmers have complained bitterly about the apparently devilish ingenuity of farm-implement manufacturers in putting a nut on a bolt where it was practically impossible to get at it with a wrench, or in making every bolt and part of any particular make of machine entirely different from the corresponding parts of all other makes. So many were the machines, and so different were all parts of them, that repairs at home have usually been impossible. The local dealer, too, has not often been able to help out unless he happened to have the same make of machine and a duplicate of the broken part. The first cost of any machine is by no means the whole story. The repairs that the farmer can make himself quickly and easily to the machine, and the service and the quick duplication of parts by the manufacturer and local dealer, are of almost as much importance as the original purchase price.

During the war the Government urged simplification and standardization of farm machinery. Following this suggestion, many of the manufacturers made a start, saw that it was a much-needed service, and have continued the movement to cut out unnecessary styles and sizes and to standardize material and parts. This standardization has begun to show already in the new machines, and we predict that the manufacturers who do the most along this line without injuring the efficiency of their product will get the farmer's business.

The Market Page

MAY we call your special attention to our market page. Few can realize the large amount of work necessary to get information of this kind together, which is of practical use to farmers and which is absolutely reliable. It would be a comparatively easy matter to copy miscellaneous market reports out of government bulletins and press releases. It is an entirely different matter to get the information direct, as our Mr. Jones does, from the markets themselves and to interpret this information in

the terms that farmers can understand and use.

Mr. Herschel Jones, our market expert, who prepares the market page each week, was formerly in charge of the New York City office of the Department of Farms and Markets and we know of no one who is better fitted by training, experience and ability to go into these greatest markets in the world and get from them the information which will be of most value to the farmers who have produce for sale.

Too Valuable To Waste

WE have received a number of letters from readers who were particularly interested in recent articles by H. E. Cook and Jared Van Wagenen, Jr., on handling farm manure. Mr. Van Wagenen's humorous comment about the interesting time he had when a boy in "playing barnyard golf," by pecking the frozen manure loose from the barnyard, shows the extreme care that farmers of a former generation took in saving every bit of manure for the land. But it seems to us that they failed then, and that farmers are still failing, in most cases, to do the one thing that is more important than anything else in conserving this important fertilizer. How many, many times we have noted great piles of manure that have had much of its real value as a fertilizer drained away and lost. We see little point to the many hours of hard labor that we ourselves used to put in in hauling manure in the spring or summer after most of it had stood all winter and spring exposed to weather and drainage conditions so that at least half of its fertilizing elements were lost.

Without question, farm manure, when properly handled, is the best fertilizer there is. In some countries in Europe a man's worth is judged by the size of his manure pile. Considering the high cost of commercial fertilizers, farm manure is especially valuable and worth saving. This means methods will pay big dividends that will get it on the land in its original form. Where it is hauled in a water-tight conveyance from stable to field, this end is accomplished. If this is not practical, and there are always times of the year when direct hauling cannot be done, then some kind of a manure shed with concrete bottom is absolutely necessary.

Concrete is comparatively cheap and easy to construct. It is not used half as much on most farms as it should be, and the first place to begin is with some kind of a protecting shed to save the best part of the manure. There is not much use in talking about the importance of manure or how to handle it in the field until the fundamental step is taken to save its original essentials.

What is the Ku Klux Klan?

A CORRESPONDENT writes, "Just what is the Ku Klux Klan?" It is impossible to properly answer this without going into great detail.

Briefly, Ku Klux Klan is a secret organization claiming to admit no one to membership except native born Americans, and having for its alleged purpose the maintenance of law and order.

Although claiming to be American in membership, the Ku Klux certainly falls far short of Americanism in principles. One of the fundamental principles of America is freedom of worship, but the Ku Klux is bitterly opposed to certain religious sects. It would seem also that those who are so strong for American principles would recognize the un-Americanism of attempting to correct wrong under cover of night, and a robe and independent of the governmental agencies that the people have established for maintaining justice.

Syracuse Meeting Boosts Dairy Show

Success Assured By Pledges From All Farm Organizations

FOUR hundred and fifty farm leaders, including representatives from nearly every agricultural county in New York State and from the eleven other agricultural States, met at a dinner at Syracuse, Monday evening, May 14, to complete the organization and lay the plans for the National Dairy Show and World's Dairy Congress which are to meet on the State Fair Grounds October 5 to 10, 1923.

The dinner was given in honor of E. Skinner, manager of the National Dairy Association, and was held under the auspices of the Syracuse Chamber of Commerce. New York State Conference Board of Farm Organizations, and the New York Cooperative Council. Much of the credit for the large representative attendance and the enthusiasm which prevailed was due to the work and organization ability of Professor M. C. Burritt, of the New York State College of Agriculture, and J. D. Barnum, publisher of the Syracuse Post-Standard. During the dinner, the assemblage was splendidly entertained by an orchestra, a male quartet, and community singing.

Presiding at the honor table was W. W. Wiard, vice president of the Syracuse Chamber of Commerce. Messages of welcome to the farmers were extended by John Walrath, Mayor of Syracuse, George R. Lunn, Lieutenant-Governor of New York State, and Charles W. Flint, chancellor of Syracuse University. The toastmaster was Albert R. Mann, dean of the New York State College of Agriculture. Much credit was due to Dean Mann for handling the long list of speakers in such a way that no one in the audience became tired.

The chief speech of the evening was made by W. E. Skinner, the honor guest, on the subject, "The Service of the National Dairy Show for Eastern Agriculture." Mr. Skinner said that the National Dairy Show is operated by the National Dairy Association, which was started some 17 years ago, for the purpose of improving the dairy breeds of America, and increasing the consumption of dairy products. The National Dairy Show is made up of and supported by producers and representatives of all interests that manufacture or distribute milk. Each year the work of the Dairy Association is culminated

by a National Dairy Exposition. Up to 1916, these shows had been held in Chicago. In 1916, upon the request of the dairy interests of New England, the show was staged at Springfield, Mass. During 1917 and 1918, it was held in Ohio; during the following two years, it went back to Chicago, its original home. In 1921 and 1922, it was held in St. Paul, Minnesota. It now comes back to the East to Syracuse in October, 1923, to help the eastern dairy industry.

Mr. Skinner then gave his audience some idea of the tremendous size and extent of the exhibits which will be at Syracuse this fall. In the big building at the entrance of the Fair Grounds, known as Manufacturers' Hall, there will be exhibited all implements that the genius of man has perfected for handling milk and all of its products. The United States Department of Agriculture has appropriated \$25,000 alone to show in this building what is being done for the dairy industry.

Near the Manufacturers' Building, there are the Dairy Building and the State Institute Building, where there will be exhibits especially arranged, showing the scientific equipment that is used in research work connected with the dairy business. Many of these exhibits will show scientific instruments invented and used in Europe. Just one exhibit in the main room of this building, showing the possibilities of butter and cheese production, will contain samples of cheese from 45 States and butter from 41 States. A very interesting exhibit will be given by various nutritional agencies from all over the world showing the many and varied uses of butter and other dairy products in the diet.

In the Poultry Building there will be everything connected with the barn and farm used in the production of milk, including milking machines, separators, milk houses and equipment, etc.

The dairy cattle at the National Dairy Show will alone be worth the trip of every dairyman in the East. The cattle barns will be filled with representative cattle of the five dairy breeds. "These will come," said Mr. Skinner, "from the four corners of the United States."

One of the interesting studies being made

by the National Dairy Association, according to Mr. Skinner, is the effect that climate and altitude have on the production of milk. He said that it had been found that a heifer raised in Texas and taken north and wintered for two years will weigh 600 pounds more than her sister of the same age left in Texas. The speaker emphasized the thought that it ought not to be necessary to import cattle from other countries for there are larger possibilities of improving our own cattle.

Mr. Skinner congratulated New York State on the building of the new coliseum on the Fair Grounds where the cattle will be judged. This coliseum has a seating capacity of 500,000 people, with a judging arena of 100 x 200 feet.

Lovers of horses will be pleased with the night horse show and exhibit in the horse barn of 200 to 300 of the nation's best horses.

Not the least interesting of the cattle exhibits will be 100 to 200 calves from an equal number of boys and girls who will be present to demonstrate what the calf clubs of the country are doing for the young people of the farms.

Manager Skinner proceeded to show why an institution like the National Dairy Association and Show was so necessary. He said the Dairy Show came with the change brought about by the disappearance of the great range country; that with the going of the cheap lands, dairy and all other farming had become much more intensive; that farming was much more of a business than ever before, and that to meet the demands of this intensive business, much education was necessary. "The dairy cow, the hen and the hog," said Mr. Skinner, "are the only opportunities the farmer has for a quick turnover. The Dairy Show exists for the purpose of helping the farmer make that turnover profitably so far as the dairy cow is concerned."

To show the rapid increase in the importance of the dairy industry, the speaker said that, "in 1920, corn was king, with a farm value of \$1,300,000,000; in 1921, the farm value of dairy products of the country was nearly twice as much or \$2,409,000,000. Bankers are in the habit of thinking in terms of gold. Yet in 17 years, the total output of

How Federal Land Banks Help Farmers

(Continued from page 451)

early days and feel fairly familiar with its methods and procedure. But a few weeks ago, at the request of the American Agriculturist, I made a trip to Springfield and spent a day at the bank in order to check up my information and to make sure that I was not presenting anything other than the truth regarding the work of the bank. The word "bank" in a big city at least suggests a large, ornate room on the level of the street, with revolving portals and uniformed attendants, and men locked in steel cages along with stacks of coin and imposing rolls of "yellow-backs." Well, the Federal Land Bank is quartered well up toward the top of a tall office building, and there is very little about it to suggest our usual ideas of a bank. I went around at the stroke of nine, which I supposed was the very earliest hour at which any one would appear, and found the place already humming with activity and punctuated by the clack of typewriters. Of course, the mere handling of money is a very small part of their activities.

Not a Government Institution

LET me make one thing plain, and correct a common misapprehension, the Federal Land Bank is not a government institution. It is organized under the Land Bank Act, and it enjoys a large measure of governmental control, supervision and privileges, but it is a private corporation, nevertheless. In one important respect, the Federal Land Bank differs from the so-called joint stock land banks in that the latter are private corporations formed for the purpose of personal gain, while the Federal Land Bank is, by its charter, specifically declared to be a non-profit-making organization, and any profits arising from its operation must eventually be returned to the borrowers through the local associations. It seems to me that the difference is fundamental.

The money that the bank loans is obtained through the sale of its bonds, these bonds being secured by the original mortgages. Now, to be exact, these are not really government bonds because the government does not guarantee their payment, but as a matter of fact they enjoy a reputation for absolute soundness that permits them to be sold in large amounts at prices comparable to the very highest class municipal and State obligations. Somehow, the financiers do not for one moment question the credit of the bank.

Encourages Thrift

I MIGHT add the somewhat remarkable fact that these bonds will be sold to farmers in amounts as small as \$40 and at prices just as favorable as if he was a very large purchaser. This is simply in line with the policy of the bank to encourage thrift among farmers and not to make money for any individual. Last year the Springfield Bank sold more than \$60,000 in bonds to farmers.

However, it must be understood that the bank is not wholly a philanthropic or benevolent institution. It is true that it is not organized for the purpose of private gain, but rather for the purpose of furnishing more advantageous borrowing facilities for farmers. Yet—unfortunately, perhaps—it cannot finance the insolvent farmer. One common criticism of the bank is that it emphasized "safety first" so strongly that usually the man who it can help can also help himself. I am sorry that this is in a great measure true, yet, on the other hand, if it were to adopt the easy policy of loaning everybody all they asked, it would be only a question of time until it would be unable to loan anybody anything. The bank is by no means superior to economic law. If a loss is sustained, it is born not by the government, but by the bank, and in the end this loss is passed on to the stockholders (the borrowers) in the form of reduced dividends. The policy of rigorous safety is, after all, the only one that is fair to all their thousands of stockholders.

If there is a default in interest or principal, the bank has no special advantages or privileges. It can only follow the usual rather long and expensive route of foreclosure through the courts.

Under Government Supervision

IF I were to define or describe the function of the Federal Land Bank in a single sentence, it would run like this: It is a great cooperative corporation operating under intimate governmental supervision and control, and its business is the loaning of money secured by first mortgages on farm property under unusually liberal and attractive terms.

At first sight, there does seem to be a good deal of red tape about getting a loan from the bank. What might be called the "farm end" of the proposition is the local farm loan association. In any locality, a group of ten or more farmers whose borrowing needs aggregate not less than \$20,000, may form themselves into an organization, select a secretary-treasurer, and with the approval of the bank become a local association. The field of such an association is generally, but not always, bounded by county lines. Every county in the Springfield territory is now regularly secured by some local association. The essential officers of such an association are the secretary-treasurer and the loan committee of three members, whose business it is to make a preliminary appraisal of all farms offered, and to make such recommendation as seem wise to them. All movements looking toward a loan must originate with and be vouched by the local association.

Applying for a Loan

THE owner of a farm who wishes to offer it as security for a loan must first make application through the secretary-treasurer of the local association. It then becomes the duty of the loan committee to make an examination and appraisal of the farm along with the collection of such other information or data as may have a bearing upon the matter. This report must be made a part of the application to the bank and

must always be signed by all three members of the loan committee. Perhaps this report may be characterized as a sort of guarantee of good faith on the part of the local association. If it seems evident to the loan committee that the loan asked is impossible, the matter stops right there. This appraisal of the loan committee cannot be increased by either the Federal appraiser or by the bank, but it can be decreased by either.

After an application for a loan has been approved by the local association, it will be forwarded to the bank, which will then direct its own—the so-called "Federal" appraiser to examine and report on the property. His report, after being forwarded to the bank along with the original application, which will be very promptly considered and passed upon by the executive committee of the bank, and the applicant will immediately be advised of their decision. The bank may take any one of three courses: (a) It may grant the loan for the full amount asked; (b) it may grant a loan for a sum smaller than that applied for; (c) it may unconditionally refuse the loan. This latter course is not infrequent if there seems to be unfavorable factors which can ultimately result only in disappointment and disaster.

Refusals Sometimes a Kindness

I FEEL sure that to refuse a loan is often in the end the great kindness. I remember once appraising a rather good farm which had been purchased a few years before by some misguided "back-to-the-landers." They were fine, intelligent, refined, Christian people, but they were helpless and hopeless babes-in-the-woods so far as agricultural matters were concerned. They were accumulating floating debt and running behind until finally they turned to the bank for a loan. I went over their plans and affairs with them, and was convinced that a loan would only prolong the agony a few years—a conclusion with which the bank agreed, although on the face of it the risk was not a bad one. The same farm and the same loan would have been unhesitatingly granted if the applicant had been a real farmer who knew his right hand from his left. Personally, I am inclined to lay great stress upon this human factor. I believe the great financier, the elder Morgan, said that he had loaned some men a million dollars on their unsupported say-so, and that he had refused a loan to other men who came with bales of bonds seeking it.

In securing a loan there are two, or, perhaps, we must say three, items of expense to the applicant. First, there is a fee of \$10 which goes with the application and which cannot be returned even if the loan is subsequently refused. This fee is for the purpose of partially (and only partially) defraying the cost of appraisal by the loan committee, the Federal appraiser and also the preparation of the necessary papers. If the loan is granted there will be a fee of one per cent of the amount of the loan, but the ten dollars at first advanced will be deducted from this amount.

The Abstract of Title

A MORE serious expense or payment which in no way directly benefits the bank is connected with the fact that after all other details are completed and before the loan is actually closed, the applicant must furnish to the satisfaction of the bank an "abstract of title" showing that there is no cloud on the title, such as unsatisfied judgments, wills that have not been properly probated, or ancient encumbrances of any kind. It ought to be said that an abstract of this kind often requires a great amount of skilled research on the part of attorneys accustomed to the work. I was shown abstracts whose bulk amazed me. If set up in type they would make a fair-sized book. The bank is surely very rigorous in this matter. Personally, I have wondered if in the interest of service and economy it might not be possible to waive a part of these requirements, although that idea does not for one moment appeal to a title attorney.

4 TIMES Around the World with ONE OILING 100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The Auto-oiled Aermotor after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting windmill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

Readers risk no money, as Imperial Laboratories are fully responsible and will refund the cost on request any time within 30 days.

April Milk Pool Price \$2.15

League Directors to Be Elected May 26

THE Dairymen's League Cooperative Association announces that the gross pool price for April is \$2.15 per 100 pounds for 3 per cent milk in the basic 201-210 mile zone from New York City. This gross price is 75½ cents higher than the gross pool price for April a year ago.

From the gross pool price there will be deducted 7½ cents per hundred for expenses of administration, advertising, etc., and 15 cents will be borrowed on the Certificate of Indebtedness plan. This leaves a net cash price to farmers of \$1.92½ compared to \$1.23½ for April, 1922, a difference of 69 cents in favor of the April, 1923, price. The net pool price of 1923 is better than the 1922 price by 74 cents.

A review of the April prices on the five classes in 1922 and 1923 shows, upon analysis, an increased efficiency of 20½ cents per 100 pounds. In other words the League is handling milk more efficiently, at the rate of 20½ cents per 100 pounds.

LEAGUE MEMBERS VOTE FOR DIRECTORS MAY 26

The term of office of eight directors of the Dairymen's League Cooperative Association, Inc., terminate this year and renominating meetings have been held in the eight districts involved. The meetings were held on May 8. Following are the nominees:

District 2, Harry Culver, Amenia, N. Y.; District 4, Harry Bull, Campbell Hall, N. Y.; District 6, J. D. Smith, Walton, N. Y.; District 8, Bradley Fuller, Utica, N. Y.; District 14, G. R. Fits, McLean, N. Y.; District 17, H. H. Marsh, Waterford, Pa.; District 22, J. D. Miller, Susquehanna, Pa.; District 23, E. E. Kinsman, Honesdale, Pa.

All of these are renominations with the exception of Mr. Kinsman, the only new director who has been nominated to take the place of Paul Waters. Mr. Waters has discontinued farming and is therefore ineligible to act as a director. On Saturday, May 26, the local association in the 24 districts which make up the League territory will vote on these eight directorships. There is no rule which compels a league member to vote for these men who have been nominated. They have the option of voting for anyone whom they desire by denoting their choice in the blank space provided on the ballot. The men who are elected on this ballot will sit as directors for the regular term.

Syracuse Meeting Boosts Dairy Show

(Continued from page 453)

all the gold mines of the country was only \$2,760,000,000, or a little more than the total farm value of the dairy products produced in one year."

Trying to show the value of the Dairy Show as an educational institution for dairymen from another angle, the speaker said that the average product per cow in the United States was 3,627 pounds. Yet there are cows which produce over 30,000 pounds in a year. In the Netherlands, the average is 7,585 pounds per year; in Switzerland, 6,500 pounds; in Canada, 3,729 pounds; and the United States is the lowest in the list with 3,627 pounds.

The speaker then said that while one object of the Dairy Show was to increase production per cow, another object, which must be equally emphasized, was to increase consumption. And then he went on to prove with figures that the average per capita consumption of dairy products in United States was much lower than almost any European country, and that we have just begun to touch the possibilities of increasing consumption in this country.

Mr. Skinner's splendid address greatly increased the knowledge of and therefore the enthusiasm for the coming Dairy Show.

Following his talk, the toastmaster called upon many representatives of the visiting State delegations and New

York State farm organizations to state briefly what the farmers will do for the Dairy Show. Representatives from colleges of agriculture and farm organizations from the following States responded: Massachusetts, Pennsylvania, Connecticut, Rhode Island, New Jersey, New Hampshire, Ohio, Michigan, Delaware, Vermont, Illinois, Virginia, New York and Maryland. Eleven of these States were represented, and the other three have pledged the support of their agricultural organizations.

Among those from New York State who made short, but good talks on what their organizations would do for the Show were: S. J. Lowell, Master of the National Grange; Enos Lee, President of the New York State Farm Bureau Federation; Mrs. A. E. Brigden, President of the New York State Federation of Home Bureaus; Albert Manning, Master of the New York State Grange; Paul Smith, member of the Executive Committee of the Dairymen's League Cooperative Association; Charles Wilson, President of the New York Horticultural Society; Professor W. A. Stocking, President of the New York State Dairymen's Association; and C. F. Bigler, President of the New York Holstein-Friesian Association.

Following these talks, H. E. Babcock, General Manager of the Grange-League-Federation Exchange nominated Berne A. Pyke, Commissioner of the New York State Department of Farms and Markets, as chairman of the permanent organization to perfect and carry out plans for the success of the World's Dairy Congress and National Dairy Show; and E. R. Eastman, Editor of American Agriculturist, nominated Professor M. C. Burrill, of the New York State College of Agriculture, as Secretary. Both of these men were unanimously elected.

Dr. Royal S. Copeland completed the toast list with an address on the importance of dairy products and their relation to human welfare.

The attendance and enthusiasm at this organization meeting are some indication of what the World's Dairy Congress and National Dairy Show are going to be, and what they will mean to all dairymen in the eastern United States.

Watch American Agriculturist for news about and plans for this big event. We hope that every dairyman will make an effort to be among the thousands who will attend.

GUERNSEYS AGGREGATE \$24,000 AT PORT CHESTER SALE

Something like 50 head of pure-bred Guernseys were sold at the Knollwood Farm sale held at Port Chester on May 15, netting approximately \$24,000 for their owner, Edgar F. Price. Between 500 and 600 persons from all parts of the United States attended. Purchasers represented several different States. The top cow of the sale went to D. O. Brent of Owensmouth, California. Mr. Brent purchased Ultra's Grace for \$2,500.

Outside of this purchase only two other cows brought over \$1,000. These were Maybell's Ultra Lass, purchased by W. R. West of New Bedford, Mass., for \$1,025 and Florham Gold Princess purchased by E. Farino of Hopewell Junction, N. Y., for \$1,000.

Some of the cattle sold belonged to J. O. Winston of Saugerties, N. Y. L. F. Herrick of Wooster, Mass., was the auctioneer. The States into which the cattle were sold include California, Massachusetts, Michigan, New York, Connecticut, New Jersey, Indiana, Pennsylvania, Ohio and Virginia. Although three cows brought over \$1,000, the majority of the individuals averaged between \$300 and \$600 each.

Wisconsin is the only State which exceeds New York in total number of dairy cattle. Minnesota has nearly as many dairy cattle as New York. On January 1, 1920, New York had 2,081,074 dairy cattle, including 1,481,918 cows and heifers two years or older. New York has had approximately the same number of dairy cows for the past 50 years.

UNADILLA The Silo of Economy

EVERY dollar put into a Unadilla Silo comes back many times during its long life. Its clever door-faster safety-ladder makes it possible to preserve the life of a Unadilla indefinitely.

You get at silage easier, put it on the stable level with least effort and make all adjustments in perfect safety.

Successful dairymen praise the Unadilla Silo and buy it a second and third time.

See why the Unadilla is the most economical silo. Write for the big Unadilla catalogue and special discount on early orders.

New York Farm News

Farm Organizations For Mullan-Gage Law

THE New York Conference Board of Farm Organizations and the Cooperative Council, meeting in Syracuse May 14, passed a resolution "emphatically and unanimously against the repeal of the Mullan-Gage Law". Secretary E. R. Eastman of the Conference Board was instructed to send a telegram to the Governor asking him in the name of the farm organizations of the State to veto the bill repealing the Mullan-Gage Law. Farm leaders present represented the Farm Bureau Federation, New York State Grange, State Horticultural Society, Federation of Home Bureaus, and Dairymen's League Cooperative Association, in the Conference Board, and fourteen commercial organizations of State-wide scope in the Cooperative Council.

There was not a single dissenting voice in the resolution condemning the repeal of the Mullan-Gage Law.

A resolution was carried by the joint meeting endorsing all the work that had been done to date by the temporary committee in organizing plans for the National Dairy Show, to be held in October.

Dr. Royal S. Copeland, United States Senator from New York, was then introduced and gave a very interesting address on the coal situation and the country's transportation troubles. Dr. Copeland showed that while commissioner of the City of New York, he became particularly interested in the coal mining situation because of the effect of the shortage of the coal upon the health of the people of the City, and as a result he made a very thorough investigation of the whole coal and railroad problem.

He said that these investigations showed that there was plenty of coal above the ground during the crisis of the past winter, but the trouble was the railroads were unable to transport it. During the railroad shopmen's strike of a year ago, 218 railroads in the country made peace with their men. There were a few railroads which did not come to an agreement, and unfortunately these few were mostly the coal bearing roads, including the Lehigh Valley, Delaware and Hudson, Delaware, Lackawanna and Western and Central Railroad of New Jersey.

The speaker said that at one time 70 per cent of the engines of the Lehigh were out of order. He said also that the financial statement of the Lehigh Valley Railroad showed a loss, which was mostly caused by the strike, of \$1,991,000, and that much of this loss—which in the end must be paid by the people—might have been avoided had this road settled its dispute with its men at the same time that the other 218 roads of the country had.

Dr. Copeland stated that the railroads were new trying to raise one and one-half billion dollars for new equipment. "These roads might much better," said the speaker, "have fixed up some of their old stock first." Senator Copeland also stated that the coal situation for the coming winter was likely to be very serious again.

At the close of Senator Copeland's address, a motion was carried by the joint meeting extending him a rising vote of thanks.

WESTERN NEW YORK NOTES

ALVAH H. PULVER

The Wayne County Farm Bureau, as announced by Manager Wagner, will soon start some reforestation work in the county in cooperation with the State Conservation Commission and the New York State College of Agriculture. The Commission has co-operated to the extent of furnishing free to the county 10,000 forest trees, mostly of the white pine variety. These will be set out on the farms of Dwight F. Gaylord, North Rose; Marvin Shannon, Alton; George Scheer, Newark; E. E. Wood, Butler; and Charles Bridger, Alton.

The Webster Cooperative Cold Storage has been completed to the extent that part of the capacity is available for use. The capacity of the plant is approximately 50,000 barrels and the storage provided so far has included about 20,000 barrels of apples and 35

carloads of dried apples, cores and skins. More trackage will be necessary to handle the holdings economically. An ice plant with capacity of 15 tons of ice every 24 hours will be installed. The New York Central railroad has assured the company officials that all the ice the plant can make over its needs will be taken by the railroad.

Prospects are now very promising for a new cold storage plant at Geneva. Representatives from Hall, Penn Yan, Seneca Castle, Phelps and Waterloo, recently met in that city and took up the matter of a cooperative plant. It is proposed to erect a plant of 60,000 barrel capacity with a capitalization of \$200,000, to consist of \$75,000 common stock and the balance of \$125,000 in bonds and preferred stock.

The Salter Canning Company, of North Rose, which recently took over the plant of the Manchester Canning Company, is giving the plant a general overhauling under the management of J. F. Salter, and when the work is finished the plant will be modernized in every way. It is expected that the work will be finished in time for the berry and cherry season and when opened the plant will remain in operation until well along into the winter months. Contracts have been closed with the growers for full capacity of the plant.

Several hundred acres of muck soil in the town of Hastings will be improved and placed under cultivation as a result of a movement started among the swamp owners of that section. The work will be furthered under the direction of the Hastings Gardens Company. All the legal steps necessary to the work have been complied with and the promoters will begin work at once.

NEW YORK COUNTY NOTES

Saratoga Co.—Spring is cool and backward, with frost nearly every night. But few auctions and not many changes of farms this year. Farmers are getting along with their work without hired help. Veal calves bring 9 cents a pound, dressed veal 14 cents a pound. Spring pigs are selling from \$5 to \$6 per pair, eggs 28 cents a dozen wholesale. Butter by the jar, is bringing 49 to 50 cents per pound. More attention is being given to butter production this spring than for several years past. Good cows are in demand at satisfactory prices. Potato buyers are combing the county around here with auto trucks offering good prices for potatoes of good quality. Some cattle are now on pasture, looking well.—E. S. R.

Essex Co.—The great quantity of snow of the past winter disappeared quickly this spring and roads became settled more quickly than for several years. Farmers are planning on about the same acreage as last year. Some old hay on hand, brings \$12 to \$15 a ton; potatoes \$1.25 a bushel; eggs 30 cents a dozen; dressed veal 14 cents. But little call for cows, or horses. Maple sugar is bringing 30 cents per pound. The maple crop was a small one, syrup \$2 to \$2.50 per gallon.—M. E. B.

Steuben Co.—It has been a very cold backward spring and farm work is behind. Scarcely any planting has been done. General conditions are very discouraging to the farmer who cannot produce at the present prices that labor demands and little help at that price. The railroads and road contractors have recently increased their wages for labor which makes it harder than ever for the farmer to get help. Eggs are 22 cents, butter 42 cents, wheat \$1.40, potatoes 70 cents, veal 12 cents, maple syrup \$2.50 a gallon, hay \$12 a ton, oats 50 cents.—C. H. E.

Cortland Co.—The cold weather has delayed spring work considerably. However, most farmers hereabouts have their oats sown. Fitting the ground for cabbage and corn is now in progress. Farmers have been having poor hatches so far. Eggs are fertile, but do not seem to hatch. Maple syrup has been selling for \$1.75 a gallon, sugar at 30 cents a pound. Eggs are now bringing 28 cents.—G. A. E.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the Walker Remedy Co., Dept. 437, Waterloo, Iowa, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the Walker Remedy Co., Waterloo, Iowa, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send Walko White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. We guarantee it. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of this guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be instantly refunded.

WALKER REMEDY CO., Dept. 437

Waterloo, Iowa

Send me the [] 50c regular size (or [] \$1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to instantly refund my money if not satisfied in every way. I am enclosing 50c (or \$1.00). (P. O. money order, check or currency acceptable.)

News From the Farmers

Of New Jersey and Pennsylvania

A NEW rate of membership dues has been adopted by the New Jersey State Holstein-Freisian Association, according to Secretary W. W. Wetmore of New Brunswick, N. J. Instead of a charge of \$1 per cow per year a flat rate has been fixed of \$10 for members having 20 Holsteins or less and \$15 for those having over 20 cows. The new rate includes the \$3 dues in the local association. The dairymen joining the State Association thus automatically become members of the county organization with paid-up dues in the County Association.

The Burlington County Holstein-Freisian Association will meet at Mount Holly, N. J., on May 26, when the Executive Committee will present its program of work for the year to the membership. At a recent meeting the following officers were elected: President, A. R. Jackson of Columbus; vice-president, C. H. Atkinson of Wrightstown; secretary-treasurer, Harvey Davis of Jobstown; Directors, Thomas Gauntt, Ernest Phillips, Frank Baycroft and Harry Davis, all of Jobstown, and Frank S. Banks of Medford.

The Belle Mead Bull Association held its first annual sale of Holsteins on the farm of J. V. D. Bergen, on May 17. Twelve consignors were listed among the Holstein owners. The annual sale of W. R. Spann of Morris-town, N. J., will be held on May 31, at which time imported Jersey cattle will be offered.

Cooperation Pays Cannery Growers
The Six-County Tomato Growers' Association formed last fall by cannery growers in Mercer, Burlington, Camden, Gloucester, Cumberland and Cape May counties has made possible contracts of tomato growers with cannery men at \$20 a ton, this price to hold for the entire season. Previous to the activities of the cannery growers the factories offered only \$16 to \$18 per ton delivered at the factories and \$13 delivered at stations for shipping by freight. A large acreage of tomatoes is being set by growers in these counties, but considerably smaller than the acreage of previous years. The feeling is general that even at \$20 a ton the growers will no more than make up for high labor costs this season.

Hon. Emmor Roberts, State Senator from Burlington County, has been elected a director in the New York-New Jersey Joint Stock Land Bank, which has headquarters in Newark. Senator Roberts is a large and successful farmer, President of the New Jersey State Horticultural Society, and Director in the Moorestown Trust Company. The Land Bank now has among its directors a representative from practically all of the leading farm organizations in New Jersey.—W. H. B.

NEW JERSEY COUNTY NOTES

Somerset Co.—The labor situation has become so difficult that a great many farms will be idle or only partly cultivated. With common labor receiving from 45 to 80 cents an hour it is impossible to attempt extensive farm operations. Many farmers formerly employing several men have cut down to what they can do themselves. Farm products are in good demand, bringing fair prices, but costs are not in proportion to prices. The severe fires that swept over parts of New Jersey this spring were extinguished by heavy rains. Thousands of acres of woodland and cultivated fields have been burnt over through the careless starting of brush fires.

There have been many orchards planted this year notwithstanding the constantly increasing cost of labor and maintenance. After several years, absence, tent caterpillars are unusually numerous this year. Poultrymen are complaining of poor hatches.—G. E. SCHWARTZ.

Warren Co.—Spring has been unusually cold. The grass is very short, wheat looks fair, corn coming up slowly and potatoes just breaking through. Little chicks are not as plentiful as

last year, poultrymen report hatches of about 75 per cent normal. Fruit trees are full of blossoms. Strawberry beds looking good, well blossomed out.—MRS. J. R.

PENNSYLVANIA COUNTY NOTES

Cumberland Co.—We are having a very backward and cold spring in this county. Not much corn has been planted so far and there is much plowing to be done. The season is almost a month late, compared to other years and consequently farmers will have to feed a month longer than usual. We had a light fall of snow on the night of May 8. The month of April and early May was quite dry, but we have been getting some nice rains lately. Prospects are bright for fruit of all kinds. Very little damage done so far. Wheat and grass are very short. Not much stock being sold now. Sales have been well attended and fair prices realized.—J. B. K.

Crawford Co.—Oats are out, all sown, ground in fine condition. Some corn ground plowed. Wheat and grass need rain. Up to the second week in May it was unusually dry for this time of the year. Eggs 23 to 27 cents, butter 45 to 50 cents, potatoes 70 cents a bushel at the car. Roads are good. Work has begun on State road. Farm help very scarce.—J. F. S.

Tioga Co.—Spring very backward. Farmers obliged to feed stock later in the season than usual. Early sown oats are up and look fine. As a rule cows are in poor flesh. Butter 50 cents, potatoes \$1.25 a bushel. Many farmers are out of hay. We have had hard frost up to May 15.—W. C. G.

PENN STATE RECEIVES GIFT OF CLYDESDALE MARES

J. N. Conyngham owner of Hayfield Farms, Wilkes-Barre, Pa., recently presented the Department of Animal Husbandry of the Pennsylvania State College with five Clydesdale mares to be used as a foundation for Clydesdale horses at the college. This donation includes two imported mares and three bred and raised at Hayfield Farms. The two imported mares are Rosebud of Warylip, bred by George Wilson of Warylip, Banff, Scotland, and Eva McGregor, bred by Alexander Wright of Upper Keith, Deskford, Cullen Banffshire, Scotland.

The home bred mares consist of two four-year olds, Diamond Queen and Hayfield Blossom, and one three-year old, Heather Blossom, all sired by Golden Knight. Two of these mares are bred to Langwater Fashion and due to foal this spring, while the other three mares were bred before they were shipped.

Mr. Conyngham has also loaned the College the two-year old stallion, Hayfield Barre.—W. S. TOMHAVE.

CENTRAL PENNSYLVANIA NOTES

J. N. GLOVER

There are still some oats to be seeded in this section. Considerable corn has been planted. The weather was very dry until May 8, when we had some good showers followed by snow on the 9th. It was accompanied by a cold wave that threatened fruit blossoms. Since these showers the soil is in good condition for plowing and planting, which will not be completed for at least two weeks. Wheat fields vary considerably in appearance.

Roads are being scraped and water courses cleared. Farmers are fixing up fences and generally cleaning up in odd moments.

The Dairymen's League is gaining strength in this section of the State. Very few fresh cows are for sale. Dry feed is plentiful and there will be hay to bale on many farms later on. Contrary to the rule, May wheat is lower than any time since January, while bran and middlings are high. Wheat is \$1.32, corn 75 cents, oats 45 cents, eggs 22 cents, veal calves 11 cents.

Farm Mortgages that die in 33 years

Under the government installment plan of reducing farm mortgage loans, your loan never comes due. With the last payment you have completely paid up principal and interest.

We are making these loans from \$1,000 to \$45,000 for thirty-three year periods. If you are interested, write us.

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words. Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest. We positively guarantee to our readers fair and honest treatment in dealing with our advertisers. We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised. To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

The Brown Mouse — By Herbert Quick

JIM shoveled on silently for a while, and by example urged Newton to earn the money credited to his father's assessment for the day's work.

"Aw, what's the use of diggin' into it like this?" protested Newton, who was developing an unwonted perspiration. "None of the others are heatin' themselves up."

"Don't you get any fun out of doing a good day's work?" asked Jim.

"Fun!" exclaimed Newton. "You're crazy!"

A slide of earth from the top of the pit threatened to bury Newton in gravel, sand and good top soil. A sweet-clover plant growing rankly beside the pit, came down with it, its dark green foliage anchored by the long roots which penetrated to a depth below the gravel pit's bottom. Jim Irwin pulled it loose from its anchorage, and after looking attentively at the roots, laid the whole plant on the bank for safety.

"What do you want of that weed?" asked Newton.

Jim picked it up and showed him the nodules on its roots—little white knobs, smaller than pinheads.

"Know what they are, Newt?"

"Just white specks on the roots," replied Newton.

"The most wonderful specks in the world," said Jim. "Ever hear of the use of nitrates to enrich the soil?"

"Ain't that the stuff the old man used on the lawn last spring?"

"Yes," said Jim, "your father used some on his lawn. We don't put it on our fields in Iowa—not yet; but if it weren't for those white specks on the clover-roots, we should be obliged to do so—as they do back east."

"How do them white specks keep us from needin' nitrates?"

"It's a long story," said Jim. "You see, before there were any plants big enough to be visible—if there had been any one to see them—the world was full of little plants so small that there may be billions of them in one of these little white specks. They knew how to take the nitrates from the air—"

"Air!" ejaculated Newton. "Nitrates in the air! You're crazy!"

"No," said Jim. "There are tons of nitrogen in the air that press down on your head—but the big plants can't get it through their leaves, or their roots. They never had to learn, because when the little plants—bacteria—found that the big plants had roots with sap in them, they located on those roots and tapped them for the sap they needed. They began to get their board and lodging off the big plants. And in payment for their hotel bills, the little plants took nitrogen out of the air for both themselves and their hosts."

"What d'ye mean by 'hosts'?"

"Their hotel-keepers—the big plants. And now the plants that have the hotel roots for the bacteria furnish nitrogen not only for themselves but for the crops that follow. Corn can't get nitrogen out of the air; but clover can—and that's why we ought to plow down clover before a crop of corn."

"Gee!" said Newt. "If you could get to teach our school, I'd go again."

"It would interfere with your pool playing."

"What business is that o' yours?" interrogated Newt defiantly.

"WELL, get busy with that shovel," suggested Jim, who had been working steadily, driving out upon the fill occasionally to unload. On his return from dumping the next load, Newton seemed, in a superior way, quite amiably disposed toward his workfellow—rather the habitual thing in the neighborhood.

"I'll work my old man to vote for you for the job," said he.

"What job?" asked Jim.

"Teacher for our school," answered Newt.

"Those school directors," replied Jim, "have become so bullheaded that they'll never vote for any one except the applicants they've been voting for."

"The old man says he will have Prue Foster again, or he'll give the school a darned long vacation, unless Peterson and Bonner join on some one else. That would beat Prue, of course."

"And Con Bonner won't vote for any one but Maggie Gilmartin," added Jim.

"And," supplied Newton, "Haakon Peterson says he'll stick to Herman Paulson until the Hot Springs freeze over."

"And there you are," said Jim. "You tell your father for me that I think he's a mere mule—and that the whole district thinks the same."

"All right," said Newt. "I'll tell him that while I'm working him to vote for you."

Jim smiled grimly. Such a position might have been his years ago, if he could have left his mother or earned enough in it to keep both alive. He

had remained a peasant because the American rural teacher is placed economically lower than the peasant. He gave Newton's chatter no consideration. But when, in the afternoon, he hitched his team with others to the big road grader, and the gang became concentrated within talking distance, he found that the project of heckling and chaffing him about his eminent fitness for a scholastic position was to be the real entertainment of the occasion.

"Jim's the candidate to bust the deadlock," said Columbus Brown, with a wink. "Just like Garfield in that Republican convention he was nominated in—eh, Con?"

"Con" was Cornelius Bonner, an Irishman, one of the deadlocked school board, and the captain of the road grader. He winked back at the pathmaster.

"Jim's the gray-eyed man o'destiny," he replied, "if he can get two votes in that board."

"You'd vote for me, wouldn't you, Con?" asked Jim.

"I'll try anything wance," replied Bonner.

"Try voting with Ezra Bronson once, for Prue Foster," suggested Jim. "She's done good work here."

"Opinions differ," said Bonner, "an' when you try anything just for wance, it shouldn't be an irrevocable shtip, me bye."

"You're a reasonable board of public servants," said Jim ironically. "I'd like to tell the whole board what I think of them."

"Come down to-night," said Bonner jeeringly. "We're going to have a board meeting at the schoolhouse and ballot a few more times. Come down, and be the Garfield of the convintion. We've lacked brains on the board, that's clear. They ain't a man on the board that iver studied algebra, 'r that knows more about farmin' than their impl'yers. Come down to the schoolhouse, and we'll have a field-hand address the school board—and begosh, I'll move yer illiction meself! Come, now, Jimmy, me bye, be game. It'll vary the program, aunyahow."

The entire gang grinned. Jim flushed, and then reconquered his calmness of spirit.

"All right, Con," said he. "I'll come and tell you a few things—and you can do as you like about making the motion."

CHAPTER II

REVERSED UNANIMITY

THE great blade of the grading machine, running diagonally across the road and pulling the earth toward its median line, had made several trips, and much persiflage about Jim Irwin's forthcoming appearance before the board had been addressed to Jim and exchanged by others for his benefit.

To Newton Bronson was given the task of leveling and distributing the earth rolled into the road by the grader—a labor which in the interests of fitting a muzzle on his big mongrel dog he deserted whenever the machine moved away from him. No dog would have seemed less deserving of a muzzle, for he was a friendly animal, always wagging his tail, pressing his nose into people's palms, licking their clothing and otherwise making a nuisance of himself. That there was some mystery about the muzzle was evident from

Newton's pains to make a secret of it. Its wires were curled into a ring directly over the dog's nose, and into this ring Newton had fitted a cork through which he had thrust a large needle which protruded, an inch-long bayonet, in front of Ponto's nose. As the grader swept back, horses straining, harness creaking and a billow of dark earth rolling before the knife, Ponto, fully equipped with this stinger, raced madly alongside, a friend to every man, but not unlike some people, one whose friendship was of all things to be most dreaded.

As the grader moved along one side of the highway, a high-powered automobile approached on the other. It was attempting to rush the swale for the hill opposite, and making rather bad weather of the newly repaired road. A pile of loose soil that Newton had allowed to lie just across the path made a certain maintenance of speed desirable. The knavish Newton planted himself in the path of the laboring car, and waved its driver a command to halt. The car came to a standstill with its front wheels in the edge of the loose earth, and the chauffeur fuming at the possibility of stalling—a contingency upon which Newton had confidently reckoned.

"What d'ye want?" he demanded. "What d'ye mean by stopping me in this kind of place?"

"I want to ask you," said Newton with mock politeness, "if you have the correct time."

THE chauffeur sought words appropriate to his feelings. Ponto and his muzzle saved him the trouble. A pretty pointer leaped from the car, and attracted by the evident friendliness of Ponto's greeting, pricked up its ears, and sought, in a spirit of canine brotherhood, to touch noses with him. The needle in Ponto's muzzle did its work to the agony and horror of the pointer, which leaped back with a yelp, and turned tail. Ponto, in an effort to apologize, followed, and finding itself bayoneted at every contact with this demon dog, the pointer definitely took flight, howling, leaving Ponto in a state of wonder and humiliation at the sudden end of what had promised to be a very friendly acquaintance. The pointer's master watched its strange flight, and swore. His eye turned to the boy who had caused all this, and he alighted pale with anger.

"I've got time," said he, remembering Newton's impudent question, "to give you what you deserve."

Newton grinned and dodged, but the bank of loose earth was his undoing, and while he stumbled, the chauffeur caught and held him by the collar. And as he held the boy, the operation of flogging him in the presence of the grading gang grew less to his taste. Again Ponto intervened, for as the chauffeur stood holding Newton, the dog, evidently regarding the stranger as his master's friend, thrust his nose into the chauffeur's palm—the needle necessarily preceding the nose. The chauffeur behaved much as his pointer had done; saving and excepting that the pointer did not swear.

It was funny—even the pain involved could not make it otherwise than funny. The grading gang laughed to a man. Newton grinned even while in the fell clutch of circumstance. Ponto tried to smell the chauffeur's trousers, and what had been a laugh became a roar.

Caution and mercy departed from the chauffeur's mood; and he drew back his fist to strike the boy—and found it caught by the hard hand of Jim Irwin.

"You're too angry to punish this boy," said Jim gently—"even if you had the right to punish him at all!"

"Oh, cut it out," said a fat man in the rear of the car. "Get in, and let's be on our way!"

The chauffeur, however, recognized in a man of mature years and full size, a relief from his embarrassment. He released Newton, and blindly, furiously, he delivered a blow meant for Jim's jaw, but which miscarried by a foot. In reply, Jim countered with an awkward swinging uppercut, which was superior to the chauffeur's blow in one respect only—it landed fairly on the point of the jaw. The chauffeur stag-

gered and slowly toppled over into the soft earth. Newton Bronson slipped behind a hedge, and took his infernally equipped dog with him. The grader gang formed a ring about the combatants and waited. Colonel Woodruff, driving toward home in his runabout, held up by the traffic blockade, asked what was going on, and the chauffeur, rising groggily, picked up his goggles, climbed into the car; the meeting dissolved, leaving Jim Irwin greatly embarrassed by the fact that for the first time in his life he had struck a man in combat.

"Good work, Jim," said Cornelius Bonner. "I didn't think 'twas in ye!"

"It's beastly," said Jim, reddening. "I didn't know, either."

Colonel Woodruff looked at his hired man sharply, gave him some instructions for the next day and drove on. The road gang dispersed for the afternoon. Newton Bronson carefully secreted the magic muzzle, and chuckled at what had been perhaps the most picturesquely successful bit of deviltry in his varied record. Jim Irwin put out his team, got his supper and went to the meeting of the school board.

The deadlocked members of the board had been so long at loggerheads that their relations had swayed back to something like amity. Jim had scarcely entered when Con Bonner addressed the chair.

"Mr. President," said he, "we have wid us t'night, a young man who nades no introduction to an audience in this place, Mr. Jim Irwin. He thinks we're bullheaded mules, and that all the schools are bad. At the proper time I shall move that we hire him f'r teacher; and pinding that motion, I move that he be given the floor."

Much laughter from the board and the spectators, as Jim arose. He looked upon it as ridicule of himself, while Con Bonner regarded it as a tribute to his successful speech.

"Mr. President and Gentlemen of the Board," said Jim, "I'm not going to tell you anything that you don't know about yourselves. You are simply making a farce of the matter of hiring a teacher for this school. It is not as if any of you had a theory that the

HOW THE STORY STARTED

JIM IRWIN, Col. Woodruff's field-hand was somewhat despised because his "book learning" did not raise him above the level of a farm laborer. Jennie Woodruff was especially scornful, and let her old school fellow see it. Her disdain hurt him, for he felt sure his theories of practical education were right. Meanwhile, he worked on the road with others of the locality, among them young Newton Bronson, rapidly developing into a township problem.

teaching methods of one of these teachers would be any better than or much different from those of the others. You know, and I know, that whichever is finally engaged, or even if your silly deadlock is broken by employing a new candidate, the school will be the same old story. It will still be the school it was when I came into it a little ragged boy—here Jim's voice grew a little husky—"and when I left it, a bigger boy, but still as ragged as ever."

There was a slight sensation in the audience, as if, as Con Bonner said about the knockdown, they hadn't thought Jim Irwin could do it.

"Well," said Con, "you've done well to hold your own."

"In all the years I attended this school," Jim went on, "I never did a bit of work in school which was economically useful. It was all dry stuff copied from the city schools. No other pupil ever did any real work of the sort farmers' boys and girls should do. We copied city schools—and made bad copies of them, too."

Jim Irwin made a somewhat lengthy speech after the awkwardness wore off, so long that his audience was nodding and yawning by the time he reached

(Continued on page 460)

"The Other View"—A Story by Lillian Davidson

Keeping City Boarders This Summer Will Pay—A Cross-Stitch Towel for the Guests Room

MRS. HARPER sighed. She was looking out into a green, grassy yard, with a white picket fence, a few beehives, and some morning-glories on the fence. Not a bad-looking yard, for big trees kept the sun away almost all day, and everything was as neat as possible. Still she sighed.

"Lias," she said, "I do wish I could have such a back yard as I saw at that house—when I went to Sarah's—it was the prettiest place I ever saw."

"Lias Harper fidgeted his feet a bit, "Wish't I could see it, you've said so much about it. I don't know where it can be, though. I thought I knew every farm within twenty miles. Was it a big white house—bigger'n this?"

"Yes, it was, a nice big house, tall and painted beautiful. And it had noble big trees in the back yard, and in the front yard too, I think. Trees lots bigger'n than ours. Oh yes, a lot bigger. And I know the water there must be soft, for there was a tea towel or something hanging on the clothes line, and Lias, it was white as snow. I never can get mine like that with the hard water here." And she looked towards the line in the yard.

"Now, Lucy, you've got a nice white dish towel on your line, and you've a tall house, and big trees. I don't believe," doggedly, "there's a prettier place in the country than this."

The railroad near them had just been completed, and Mrs. Harper had recently taken her first trip over it. In order to reach the station, they had to drive about five miles, but in making a curve, the road ran just the other side of a forty-acre field from their home. Ever since Mrs. Harper's return, she had described a farm house so very beautiful that she longed to live in it. She had spoken of the white fence, the tall trees, the house, the hollyhocks, the vines, until her husband was getting a little out of patience.

The next day, Lias returned from town seeming very much elated.

"Lucy," he said, "I do believe I know where your nice farm house is—I do, by dacky! It ain't so awful far away. I guess we can go out and see it about—le's see—about Friday. Can you get away then?"

"INDEED I can, Lias. I'd leave my work any time to see that grand place again. Can we drive over?"

"No, we'll go on the cars—that's the best way. You said there was a bridge, didn't you, where the railroad crossed a river?"

"Yes, a nice big river, too. Wider and bigger than this little muddy stream. It was a long bridge—and there was some men working there."

"Well, Lucy, I guess we'll lay off and go over Friday."

"But Lias, if I see that place again, I'll feel worse than ever to live here in this little low house—I'll want that place worse than ever—" and she sighed again.

"I'll get it for you, Lucy, if it's where I think it is. I believe I'd like to live in that place too," and he went out chuckling.

The train they took was a freight. Lias said it would stop at the bridge, so they could get off.

"How in the world will we get home, Lias?" asked Mrs. Harper.

"You never mind—we'll get home. Don't we always get home?" he teased.

The freight traveled slowly, but finally Mrs. Harper pointed in excitement.

"There it is," she said, "ain't it the grandest looking place? See the towering trees, and that green back yard with the white picket fence, and the morning glories. I do know it is the prettiest place in the country—"

"Now Lucy! Don't jump off before the cars stop, there—we're stopping now."

The trainman helped them off, and Lias and Lias exchanged a sly wink. The scramble down the grade was rather hard for Mrs. Harper, but she was too excited to care, and she also crawled through a wire fence, a thing she had always said she could not do. Then she straightened up, and took a good look. The alfalfa field took her eye first.

"Now ain't this the best alfalfa you ever seen, Lias? Why, it's inches higher than ours—and look how even! Better ground, I think. I wonder if these folks will care for us coming right up to the house this way?"

"Not a mite," said Lias, "I've got that all fixed."

"My, my—" broke out Mrs. Harper, "What noble big trees right over the back door! Shady all day, and such a good back yard to work in—a thing I've always wanted. Lias, do see them beehives, white as marble! The man who lives here is a good manager, I'll bet."

"Well, I think he is," said Lias dryly.

"Look at the morning-glories—I do love them and we never have any luck with them. And what a nice big house—I'll wager the chambers upstairs are nice and high" she spoke in a low voice, as if fearing to be overheard. "Now look at that tea towel. Lias, I can't get mine white like that in hard water."

She broke off with a startled look, "Lias,"—she stammered, "Why, there's my old washing machine—and the old hickory chair. . . ."

"Lias Harper—" looking around—"Why this is our own house—and you knowed it all the time—and you just did this to fool me! Well I swan!" and she hurried through the kitchen door.

Lias sank down in the old hickory chair.

"Distance makes things look a heap bigger—and then, the other view makes a difference too. Guess Lucy'll be satisfied now, though," and he smiled a slow smile.

KEEPING CITY BOARDERS

I have often read in your paper arguments in favor of remaining on the farm, and I say "aye." The farm every time! A good living can be had from chickens and a cow or two; but if the farmer's wife wants to help along still more, let her take a few city boarders. I have done so for the past few years and I know there is money in it.

Start early in the spring to prepare for them. Plant a large garden with all the different kinds of vegetables—not forgetting brussels sprouts, spinach, kohlrabi, swiss chard and cauliflower for you will find a few who will like these as well as peas, beans, corn, or tomatoes.

Fix the house and grounds as attractively as possible without going to any great expense. Paint all the floors or cover with linoleum. If you use paint, use a russet color and then add two coats of varnish. They will be much easier to clean than rugs or carpets.

Put up little sash curtains at your bedroom windows, and place in each bedroom a dresser, two chairs and above all, a comfortable bed. If there is no clothes closet, put some hooks on the door, or place a curtain across the corner of the room with a few hooks in the wall behind it.

Furnish your living room comfortably but keep it plain, taking out all bric-a-brac. Have plenty of rockers on the porch and swings, etc., in the yard.

The Food is Very Important!

Now for the "eats!" First, keep your table cloth spotless. Use paper napkins, fold them three cornered and place a dozen or so in a large glass or other holder on each end of the table. Our boarders like these better than cloth napkins. Put a piece of butter and a slice of bread on a bread and butter plate at each place. Serve the meat and potatoes on the large plates from the kitchen. Serve all juicy vegetables in individual dishes and all others in large dishes.

For breakfast have eggs in some form and about twice a week serve meat instead. Besides eggs, we give a choice of two cereals, one cooked and one uncooked, toast and plain bread, coffee, and fruit, either fresh or stewed. For dinner, at noon, serve soup, meat, two vegetables and dessert and coffee. For supper have cold meat, a vegetable, a salad, fruit, cake and tea. Be sure to serve a variety. Never serve the

same meat or dessert two days in succession, and the same applies to all vegetables except corn. City people are very fond of sweet corn and you cannot serve it too often, but you must serve other vegetables with it.

Don't try to keep less than ten boarders, it will not pay.

If you have a daughter or son to help you, you will find you can do the work for ten or twelve. Of course it will mean hard work, but plan your meals and your work ahead. Get up early and have all your baking for the day done before you serve breakfast and it will help you wonderfully. There will always be some women among your guests who will help you wash the dishes and other light work, taking care of their rooms and getting vegetables ready. Don't try to do any extra housework or sewing, just do what is most necessary. If you are strong and healthy the work won't be too hard.—MRS. EMMA DENTON.

AN EASY TOWEL TO MAKE

Every woman takes pride in having pretty towels on her rack when guests come, and fortunately this is a sort of embroidery which takes very little time and yet shows more effectively than almost any other article on which handwork can be put.

The design which is shown this week calls for both cross-stitch and solid (or

eyelet) work. It is bordered by an in-and-out running stitch which is easy to do, yet adds character to the final effect.

Double hemstitching is illustrated as a method of hemming the towel. Stamp your design so that an equal length of material is left below the part to embroider. After working the design, fold this over to make the hem and in this way the back of the towel does not show the unattractive wrong side of the embroidery. Then crease the lower edge of your hem, draw about five threads of material as indicated for hemstitching, and finish.

The other end of the towel may be left plain or have a simple cross-stitch border, the transfer for which is furnished with the more elaborate one.

E11—cross-stitch towel design, 2 ends, will be sent for 12c. in stamps. Address Handicraft Department, American Agriculturist, 461 Fourth Avenue, New York City.

"GOULASH"

This is a recipe especially for those who do not know what to do with little leftovers. First, if you have the broth from cooked, fresh meat and do not wish to make gravies of it, you can use it with the leftovers.

If you have a bowl of chicken or beef gravy, put it in a pan or if you have a little of each put in pan together. Have you a cold boiled potato or two? If so, dice them and add, and a saucer of peas and beans and corn, and a small piece of beef, chopped fine, a stalk of celery minced, a cup of boiled

rice or macaroni. Then add 1 pint to 1 quart of tomatoes, stir and let it be simmering on one side of the stove. Now mince fine an onion as large as an egg. Cover with water and add a small pinch of soda. Cook about ten minutes. Pour this in with the rest and let all boil up. It may need a little seasoning and may not. Serve hot, of course, in individual dishes.

Say nothing of what it is to your family, and if everything is good, they will pronounce it delicious.—MRS. IDA A. BROWN.

The Brown Mouse

(Continued from page 459)

his peroration, in which he abjured Bronson, Bonner and Peterson to study his plan of a new kind of rural school—in which the work of the school should be correlated with the life of the home and the farm. Three sharp spats of applause from the useless hands of Newton Bronson gave the final touch of absurdity to a situation which Jim had felt to be ridiculous all through. Had it not been for Jennie Woodruff's "Humph!" stinging him to do something outside the round of duties into which he had fallen, had it not been for the absurd notion that perhaps, after they had heard his speech, they would place him in charge of the school, he would not have been there. As he sat down, he felt himself a silly clodhopper filled with the east wind of his own conceit, out of touch with the real world of men. The nodding board of directors, the secretary, actually snoring, and the bored audience restored the field-hand to a sense of his proper place.

"We have had the privilege of list'nin'," said Con Bonner, rising, "to a great speech, Mr. Prisdint. We should be proud to have a borned orator like this in the agricultural pop'lotion of the district. A reg'lar William Jennin's Bryan. I don't understand what he was trying to tell us, but sometimes I've had the same difficulty with the spaches of the Boy Orator of the Platte. Makin' a good spache is one thing, and teaching a good school is another, but in order to bring this matter before the board, I nominate Mr. James E. Irwin, the Boy Orator of the Woodruff District, and the new white hope, f'r the job of teacher of this school, and I move that when he shall have received a majority of the votes of this board, the secretary and prisdint be instructed to enter into a contract with him f'r the comin' year."

The seconding of motions on a board of three has its objectionable features, since it seems to commit a majority of the body to the motion in advance. The president, therefore, followed usage, when he said—"If there's no objection, it will be so ordered. The chair hears no objection—and it is so ordered. Prepare the ballots for a vote on the election of teacher, Mr. Secretary. Each votes his preference for teacher. A majority elects."

FOR months, the ballots had come out of the box—an empty crayon-box—Herman Paulson, one; Prudence Foster, one; Margaret Gilmartin, one; and every one present expected the same result now. There was no surprise, however, in view of the nomination of Jim Irwin by the blarneying Bonner when the secretary smoothed out the first ballot, and read: "James E. Irwin, one." Clearly this was the Bonner vote; but when the next slip came forth, "James E. Irwin, two," the Board of Directors of the Woodruff Independent District were stunned at the slowly dawning knowledge that they had made an election! Before they had rallied, the secretary drew from the box the third and last ballot, and read, "James E. Irwin, three."

President Bronson choked as he announced the result—choked and stammered, and made very hard weather of it, but he went through with the motion.

"The ballot having shown the unanimous election of James E. Irwin, I declare him elected."

(To be continued next week)

Children's Clothes Should Suit Them

Fashion and Cookery Hints—Help the League Milk Survey

THE mother who makes her children's clothes has the satisfaction of having them wear longer than any she could buy readymade, while she also often hears the neighbors comment on how prettily the children are dressed.

American Agriculturist children's styles are planned for the farm woman who doesn't want to fall behind her city sister in having attractive clothes for her children, yet who has to remember expense and wearing quality. The fashion editor is always glad to have mothers write her for advice about their own clothes or those for the children and will gladly suggest designs, colors and materials. Enclose a stamped, self-addressed envelope for the reply.

Long-waisted styles are most becoming to the little girl and while No. 1649 is suitable for all little girls, it is especially good for the one who is perhaps a bit too plump. The sleeves are cut in one with the back and side front, so it is very easy to make. The front panel extends into a tie-sash. Only 1 7/8 yards of 36-inch are necessary for the 4 year size.

No. 1649 comes in sizes 4, 6, 8, and 10 years. Price, 12c. Transfer 622 in blue, 12c.

The most important thing in a little boy's life is play and so one of the most important things to have for him is a good play suit. And here it is! You could use denim, chambray, madras or any durable wash material for this suit. No. 1681 cuts in sizes 2, 4, 6 and 8 years. For size 4 only 1 1/2 yards of 36-inch material is needed. Price 12c. stamps.

Then for the slim girl, No. 1736 gives a fluffy, soft effect which is very becoming. The delicate ruffles and lace or embroidery inserts make this frock suitable for parties and Sunday wear. If you embroider it, use transfer 631, which is 12c. extra. Pattern 1736 comes in sizes 3, 10, 12, and 14 years. For an 8 year size 1 7/8 yards of 36-inch material is required. Price 12c. stamps.

To Order: Write all information clearly, enclose stamps for correct amount, mail to the Fashion Department, American Agriculturist, 461 Fourth Avenue, New York City.

If you add 10c., a copy of our new summer catalogue, brimful of pretty and practical suggestions will be added to your order. It is worth many times the cost and we advise you not to be without a copy.

USE MORE VEGETABLES

ALICE MARGARET ASHTON

"What's the use of our making a garden?" the man-of-the-house frequently grumbled. "We never eat what we raise."

"I know we ought to use more vegetables," I always was forced to admit. "But so often a meal is prepared in a hurry and there isn't time to gather and prepare them. Getting vegetables from the garden and washing the root varieties is messy too, especially after I've donned a clean dress or white shoes."

Neighboring housewives admitted that they had much the same experience. I resolved to find a remedy.

Early in the day I go to the garden

or to the vegetable cellar, according to the season, and choose a plentiful supply for the day's use. Root vegetables are at once thoroughly washed and placed in a wire drainer. With the vegetables at hand and clean, I find double the uses for them that I did when each variety must be separately brought from garden or cellar as needed.

Clean Many at a Time

Another great convenience in the use of root vegetables consists in cleaning a quantity at one time. When a basket of potatoes are dug, carry them at once to an outdoor faucet or pump and thoroughly wash them all. A wire basket or rack is fine for draining them. During winter I have a basketful brought from the cellar at one time, and wash them all in the same way. It certainly is a joy when they are needed in a hurry to find them clean and ready for use. Other roots may be handled in the same way, though in smaller amounts.

An excellent way to clean root vegetables is to dampen a very coarse sack, pour in the roots and shake them about vigorously. When poured out into water it will be found that this saves a great amount of work with the cleaning brush. Turn the sack inside out, rinse and dry.

Another short-cut in the use of vegetables consists in cooking enough at one time for several servings. This does not mean a monotonous diet, either. Beets may be buttered at the first serving, pickled for the next day and what are left after this used in a vegetable salad on the third. Left-over corn, cut from the cob may be creamed, or used in fritters or croquettes.

MILK SURVEY UNDER WAY

How much milk does your family drink?

You had better begin to calculate now if you haven't an exact idea, for a nutritional study is planned for several up-State counties, and both school children and adults are being called upon for information on their use of dairy products.

Miss Laura C. Cauble, director of nutrition of the Dairymen's League, has already visited some of the counties where the survey has started. When

HANGING UP A RECORD

DURING the last year, the American Agriculturist fashion department sold more than 24,000 patterns.

That means that from our 120,000 readers an average of one in five used our pattern service.

We believe that this is an exceptional record. We are trying to show up-to-date, smart styles, which yet can easily be made by the home dressmaker. We believe that it is just as easy to make a pretty dress as an ugly one—and much easier to wear it, whether for work or play!

Home-dressmaking has not always been as easy as it is now. Think of the days of whalebones, gored skirts, infinite ruffles and clumsy heavy materials! The farm woman is mercifully freed from the old style of tightly fitted, uncomfortable clothing. Present styles seem just made for her and she is short-sighted if she does not take advantage of them to provide herself with suitable, becoming dresses at small cost.

Even the children can help nowadays, and high-school girls everywhere are making their own clothes from the first step to the last. The ready-mades can never equal home sewing for personality, good materials and careful work. We are proud of the large number of readers who do their own dressmaking and welcome others who are just beginning to see its possibilities into our big A. A. sewing circle.

the work is thoroughly under way the list will include Tioga, Ontario, Tompkins, Orleans, Jefferson, Delaware, Wyoming, Niagara, Otsego and Warren counties.

Cooperating in the work of the survey are the State Federation of Home Bureaus, the Extension Service of Cornell, and the State Department of Education. The returns will be tabulated after the work is completed, which should be about June 15.

In the classrooms the children will be called upon to answer a few simple questions about their food habits, while the parents are asked for somewhat more detailed information.

The facts thus gathered will be of the utmost service to the Home Bureaus and the college in planning extension work and will also be widely used by the State Department of Education through its health service. The counties chosen, partly for geographical reasons, were also selected because they are representative of the entire State. Several are large dairy centers, while others combine city population with country.

So if the white and buff cards come around in your locality, fill them out as carefully as possible and help the good work along!

OUR FRIENDLY NEIGHBOR

A Story for the Children

My dear Boys and Girls: This little story about Mrs. Robin is true; it happened exactly as I am telling it to you.

On the west side of our house is a lovely old crab apple tree, not of much use so far as the apples are concerned, but worth a fortune when it is one great bouquet of blossoms, with honey bees by the hundred buzzing about in it, and, too, it is very useful as a home for the birds.

One year a very clever Mrs. Robin chose a forked limb in it for her home. When first we saw her—or heard her, for there was no joke about the noise she was making—she was flying against Junior's window, on the side of the house by the tree, beating her little body against it, pecking loudly and persistently at the glass. We decided that she wanted to come into the room to build, and, of course, there was no doing anything with 12-year-old Junior about not letting her, so we opened the window. But that was not what she wanted at all. What do you suppose she did want?

By the window was a table on which was about everything that a boy usually owns, including a bunch of string. Mrs. Robin had seen it through the glass, and being a conquering sort of robin, decided she must have it. She flew in and about the room, paying no attention to us—but we were very, very still—and alighted on the table, pulled out a strand of string, and away she flew! After that for many days she came regularly for string. When the window was closed, she picked at it and scolded, until someone opened it, after which she would help herself and be off to her nest-building.

With the string she mixed mud and grass, making a substantial structure. Then one day from the window we saw in it five blue green eggs, and then five baby birds, squirmish looking things at first, but later quite respectable in their reddish brown shirt fronts, spotted with black. Mother Robin sported a black cap and a gay red vest.

Mr. Robin was quite a help with the babies, bringing food and watching the home while Mother Robin went away for occasional exercise. Many, many times a day he would call to her, "Cheerily, cheerup—cheerup—cheerily—cheerily, cheerup."—ELIZABETH HOAG.

Dear Household Editor:—I have received your two recipes on soap making. I have tried one recipe thus far, and a very good soap resulted. I think it is even better for laundry use than soap that I have purchased at a store.

Thank you very kindly for your help. I surely will know where to write if I have any trouble.—MRS. ALEXANDER CARLO, New York.

You can sell lightning rods

You need no sales experience to establish a profitable business of your own selling R. H. Co. Lightning Rods. They have been giving perfect lightning protection for 74 years, and bear the official approval of the U. S. Department of Agriculture and Underwriters' Laboratories.

With only a small capital and a willingness to work, you can make a good income—if you'll let us show you how. You will be backed up by our strong advertising, and have our close co-operation.

If you are looking for a real opportunity to build a substantial business on a good product which every farmer needs, write today for terms on exclusive territory and full particulars.

Reviewing the Latest Eastern Markets and Prices

CHEESE SOLD BY "CALL"

HERSCHEL H. JONES

THE New York Mercantile Exchange, which is the board of trade of the egg and poultry wholesale business, last week began for the first time to sell cheese by the "call" system, as eggs are sold. At 10:40 A. M., those members of the exchange who have cheese to sell, may announce what they have to offer and buyers in turn give their bids. On the huge wall blackboard of the Exchange "Floor", the offerings and bids are written, and when the two meet, sales are made.

The use of the "call" method of selling cheese is to be tried two months and continued permanently if there is a demand for it. A committee of the Exchange prepared a system of grades which are to be used as a basis of trading in American cheese. These grades include: "Fancy Specials", "Fancy", "Average Run" and "Undergrades." At the opening sale Monday, May 14, 900 boxes were sold, about half State and half Wisconsin. Prices ranged from 21½¢ to 22½¢ on average run and fancies.

It is difficult to say at this time whether this innovation will have any material effect on the New York cheese quotations which are of vital interest to every dairymen in the New York milk shed. It may have a wholesome effect of giving more open publicity to offerings and sales, and thereby enlivening trade. On the other hand if too much importance is attached to such sales as an indication of the market, it might easily be possible for an interested party to manipulate the market with artificial sales of comparatively small quantities of cheese. Such a thing has been possible in the Exchange transaction on eggs.

These new grades of the New York Mercantile Exchange are now being used in daily trade quotations. The full grade descriptions will be furnished any of our readers on request. The Exchange grades do not take into consideration the score of the cheese, but the characteristics of each grade are described under the heads of Flavor, Body and Texture, Finish and Appearance, and Color. The new definition for "average run" cheese keeps the quality requirements of the grade constant, regardless of the season of the year and regardless of the average quality of the stock offered.

NEW POTATOES PREFERRED

In New York City there is practically no demand except in a very small way for old potatoes. The number of cars in the yards is relatively small but the buyers for the best trade do not seem to care if they vanish overnight for the stock is spongy, sprouted and in generally poor condition. All the attention is centered on potatoes from the South, mostly Florida with now and then a car or two from South Carolina. The market for Florida's touched \$8.50 per bbl. on the docks last week and dealers are optimistic. Some are holding expecting the demand to continue and prices to advance a little. A good car from Carolina sold for \$8.

The highest prices quoted for State potatoes were only realized in a few small sales of the best. On May 17, State round whites No. 1, per 150-lb. sack were quoted at \$2.50 @ \$2.60 for best and \$2.25 @ \$2.40 for ordinary.

FRUIT PROSPECTS GOOD

Unofficial reports indicate a large crop of peaches in New Jersey this year, and comparatively little damage there from freezing. In Georgia and the Carolinas, however, the late frost did much damage and the crop will be small.

It is also reported that the summer apple crop promises to be much below last year, which would be a very good thing for the growers as the markets last year were glutted. The U. S. Bureau of Agricultural Economics reports cold storage holdings of barreled apples on May 1 as, 578,000 barrels, an excess over the same date last year of 330,000 bbls., compared with a five year average of 305,000 bbls. In spite of this excess in holdings over last year's stocks the markets generally are in good healthy shape with sufficient demand to maintain steady prices. Best

Baldwins, A grade, 2½ inch, N. Y. State, brought last week \$7 @ \$7.50 per bbl.; Fancy, \$7.50 @ \$8; Ordinary, \$6 @ \$6.25; Ben Davis, best, \$4.25 @ \$4.50; Fair stock, \$3.75 @ \$4.

EGG MARKET IRREGULAR

The market for nearby hennerly white eggs continued quiet, weak and irregular last week with the greater part of the supply selling in mixed bunches at a range of 29 @ 33c per dozen. Toward the end of the week most sales were at 29 to 31c. Very few, even of the best fancy fresh State eggs, and other nearby brought top quotations. Fanciest nearby and Jersey white eggs showing strict uniformity in color, size, quality and package were steady with a fair demand toward the end of the week at 36 to 40c per dozen according to the closeness of the grading. There was a surplus of average and ordinary qualities of nearby eggs.

So far this month the statistics indicate a shortage in storage accumulations compared with last year. The movement into storage has increased

per case when the eggs are stored in New York City. Extra labor in handling eggs, requiring repacking or raising covers on the floor of the cold storage house, is charged for at 2c per case.

It is customary for the cold storage companies to advance about 70 per cent of the value of the eggs at the time they go into storage, but not to exceed \$6 per case. The banks advance to their regular customers a higher percentage of the value. The interest charges on the money advanced on eggs must, of course, be added to the costs in determining whether any profit is made at the time they are withdrawn.

Any person wishing more detailed information relative to the cold storage of eggs can obtain it by writing to the Market Department of the American Agriculturist.—H. H. J.

BROILER SUPPLY INCREASING

Express shipments of broilers to the New York market last week were very much heavier and the demand was not sufficient to hold prices firm. Toward

The possibility of large importations of foreign butter, providing our June market runs above the 40c level, is a strong factor in holding down the tendency toward higher prices. We have been drawing butter from various foreign countries under an 8c duty. Regular shipments have again started from Denmark, and Canada has been sending us a good many cars. Miscellaneous shipments of butter from Ireland, Finland, Esthonia and New Zealand, are due in New York within the next week or two.

DRESSED CALVES UP

The supply of country dressed calves on the New York market last week was so limited that the market advanced early in the week 1c per lb. on all grades. In the latter part of the week the trade was slower and the market tended weaker with quotations remaining about the same. Wholesale prices May 17, per 100 lbs. of country dressed veal calves were: prime, \$13.50 @ \$14.50; fair to good, \$12.25 @ \$13.25; common to medium \$9 @ \$12; culls, \$8 @ \$9; small, \$5.50 @ \$7.

The dressed lambs sold up to \$10 per cwt. for choice heavy hot house, but poorer qualities lower.

LIVE CALF MARKET FIRM

The markets at Jersey City and 60th Street Stock Yards for large calves were very active and firm last week except that toward the end of the week there was a weaker tendency at Jersey City, where most of the calves were received. In the middle of the week live veal calves, prime, sold per cwt. at \$14 to \$14.50; fair to good, \$12.75 @ \$13.75; common to medium, \$10 @ \$12.50.

BUFFALO FEED PRICES STEADY

There were very few changes in feed prices at Buffalo last week. Quotations on carlots Buffalo rate basis, in 100 lb. sacks per ton on May 17, were: Gluten feed \$41.05; cottonseed meal \$44.30; oil meal, \$39.50; standard spring bran, \$33.50; hard winter bran, \$31.50; standard spring middlings, \$34.50; choice flour middlings, \$37; white hominy, \$35.80. No. 2 yellow corn per bushel, 94c; No. 2 white oats, 52½¢; No. 3 white oats, 51c.

CASH GRAINS AT NEW YORK

Cash Grain quotations May 18 at New York were as follows: Wheat, No. 2 red, \$1.52½; No. 2 hard winter, \$1.35; No. 2 mixed durum, \$1.30; corn, No. 2 yellow, \$1.02, No. 2 mixed, \$1.01½, No. 2 white, \$1.02; oats, No. 2 white, 56½¢, No. 3 white, 55c; rye, 92½¢; barley, 82 @ 83c.

Chicago: No. 2 hard winter, wheat, \$1.22½; corn, No. 2 white, 86c; No. 2 yellow, 86 @ 87c; oats, No. 2 white, 46 @ 46½¢; No. 3 white, 45¼ @ 45½¢; barley, 82 @ 83c.

Hogs, Yorkers.....	8½@9	8½

rapidly since May 1, however. The New York trade output has been increasing steadily since the slump early in April. The output for the past four consecutive weeks as given by the Producers' Price Current, are respectively: 81,757 cases; 98,072 cases; 107,797 cases; 124,866 cases.

WHAT IT COSTS TO STORE EGGS

Egg producers may be interested at this time in a few figures on the cost of putting eggs into cold storage. In the first place, it may be well to point out that any responsible person can put eggs away in a public cold storage house. The storage charges are fixed by printed schedule. Although the storage companies might naturally be expected to show some preference to large, regular customers, they will accept lots as small as five or ten cases. The largest public cold storage company which stores eggs in the metropolitan area charges for storage in Jersey City the following prices:

Lots of 100 cases or more (30 dozen to the case), 14c per case for first month; 7c per case each month thereafter.

Lots of 25 to 100 cases, 16c per case for first month; 8c per case each month thereafter.

Lots of under 25 cases, 20c per case first month; 10c per case each month thereafter.

To these charges must be added cartage charges, except where delivery is made by express or carlots are delivered alongside the warehouse. Then there is insurance of about 42c per \$100 worth of eggs per year. The cartage charges are about 6c per case from New York to Jersey City and 4 to 5c

the end of the week only a small part of the broilers received sold at top quotations. Express shipments of fowls were very light and the trade paid for fowls unusually high for this time of the year, due in part at least to the cool weather.

Broilers, colored, fancy large, sold May 17, at 55c; colored small, 45 @ 50c; white leghorn, fancy large, 50c; white leghorn, small to medium, 30 @ 45c. Rabbits 31 @ 33c per lb.

CHEESE CONTINUES STEADY

In spite of gradually increasing general supplies, cheese prices held steady last week. The expected decline in the Wisconsin primary markets did not materialize. The production is below normal for this season and full grass cheese is not yet being shipped from the producing States. Receipts of cheese at New York last week were actually lower than the previous week. State whole milk flats, fresh, average run, were quoted at 22c; held flats average run, at 27½ to 28c.

BUTTER MARKET FLIGHTY

The relatively high prices on creamery butter reported in our last issue did not hold last week. On May 17, creamery extras, (92 score) were down to 42¼ @ 42½c per lb., and the market was very sensitive. There were frequent fluctuations during the week within a narrow range. The surplus in production is approaching and the market is getting down to a speculative storage basis. It is still quite uncertain as to what June prices will be, but future sales for June extras on the Mercantile Exchange last week were within a range of 40¼ @ 40½c.

How Federal Land Banks Help Farmers

(Continued from page 454)

The cost of this abstract, which must be paid by the applicant, will vary greatly, according to the labor involved and the scale of charges on the part of the attorney doing the work, but it will rarely be less than \$20, and may easily reach \$60. However, it ought to be said that an abstract once completed becomes a permanent record and will have real value if at any time it is desired to sell the farm. It is exceedingly desirable, however, that this necessary expense be kept as low as possible. The abstract becomes the property of the owner.

Subscribing to Shares of Stock

THERE is one other item of cost that is commonly very much misunderstood, and that is the subscription to shares of stock of the bank. The theory of the whole scheme is that the bank is a cooperative enterprise, and that each borrower must subscribe for shares of stock equal to five per cent of the amount of his loan. This stock is used as a basis for the distribution of dividends; that is, of any profits arising from the operation of the bank, and also as an insurance against any mismanagement of the local association.

At first sight, it seems ridiculous to demand that a man who is already seeking a loan should be asked at the same time to make an investment—and there is some truth in the contention. However, this must be said: That it is an investment and not merely an additional fee. It is practically certain to draw dividends during the years, and it will be deducted from the amount of the last payment. Last year the Springfield Bank paid dividends of 7 per cent on this stock. Also, in theory it makes every borrower a part of the organization of the bank.

The bank works pretty promptly. If an applicant feels that it takes an unconscionably long time to get his loan, I think he may generally feel that the delay rests with the local association rather than with the bank. They tell me that the record time for putting a loan through from the original application to the check was four days. But from two to three months will be the more usual time. There are several steps in the progress, but if there were no delays between it would not take long. Perhaps these steps may be stated thus: (1) Applying through the local association for the loan; (2) the visit and appraisal by the local loan committee; (3) filing the application with the bank; (4) the visit of the Federal appraiser; (5) the executive committee of the bank consider the application and make their decision, if favorable the loan is granted subject to acceptance by the applicant and the furnishing of a satisfactory abstract of title; (6) the closing of the loan and the mailing of the check to the local association.

A Policy of "Safety First"

IT must be said that the bank insists on "safety first" as rigidly as any institution well can. Probably no great corporation will ever be able to give the same sort of human touch and service that prevails between neighbors and friends—such as Joe Brown gave when he financed our county. Yet back of the whole plan is the fact that the Federal Land Bank is not organized to enable anyone to make money, but rather to furnish credit to farmers upon the most liberal and advantageous terms consistent with sound finance. With all their rigid care, there have been but few foreclosures.

The bank sells its bonds—that is to say, it borrows—in sums of many millions of dollars at a time, and then it loans out the money thus secured in sums ranging from \$100 to \$25,000. Its rules specifically provide that the interest rate to borrowers shall never be more than one per cent greater than the interest rate on their bonds. For example, just now the bank itself pays 4½ per cent interest, and loans this money out again at 5½ per cent, and out of this one per cent margin, which certainly does not seem excessive, it maintains a great organization, covers its expenses, in addition, accumulates a surplus, this surplus is loaned to the bank, but to its borrowers, and in the end to

the borrowers of which the local associations are made up. If the bank is economical and successful in its operations, every borrower finally profits thereby.

The interest rate at present on mortgages is 5½ per cent, and this will be changed in accordance with the prevailing money market. If conditions become such that the bank can borrow at only 4 per cent, then the interest rate on loans will automatically fall to 5 per cent, and even the present loans may be reduced after five years. This is more liberal treatment than would be accorded by any private institution.

Perhaps the outstanding feature of a land bank mortgage is the amortization plan. "Amortization" is a long, and until recently, a very unfamiliar word. Perhaps we may freely translate it as "killing off the mortgage." The plan provides for a small uniform payment each year throughout the life of the mortgage, and this amount is so calculated that the whole debt, both principal and interest, will be paid at the end of a certain definite period. For example, the typical \$1,000 mortgage of the Land Bank calls for the payment of \$32.50 each six months for 34½ years of 69 semi-annual payments, when the debt will be paid. At first the amount of principal paid will be very small. For example, the first payment will represent \$27.50 interest, and only \$5 principal, but the last payment will be only 87 cents interest and \$31.55 principal.

Paying Off the Mortgage

IT should be said that the contract provides that the entire amount may be paid on any interest date after five years, and, indeed, I was given to understand that the bank would probably waive the five-year clause if for any reason the mortgagee wishes to pay it earlier.

It is a fact that under the old arrangements there were a considerable number of mortgages where the interest has been paid through long years with promptness, but never any payment on the principal because the owner has unconsciously come to regard his interest payment as a sort of rental rather than interest on a debt. The amortization plan of the land bank avoids this attitude and insures a slow but absolute discharge of the debt.

So far as its position before the law is concerned, a land bank mortgage is in no way different from any other. The owner has precisely the small rights and privileges that he would possess if the mortgage was held by his neighbor, but it has the advantages of very small payments and a long term before due, together with an interest rate lower than he would be apt to secure if he had borrowed from an individual.

There are twelve branches of the Federal Land Bank scattered from New England to Washington (State), California and Texas, but most readers of the American Agriculturist will be interested only in Branch No. 1, located at Springfield, Mass., and serving New England, New York and New Jersey. Pennsylvania is served by the Baltimore branch.

A "Going Concern"

THE New England Bank is the smallest of the twelve, but on April 30 of this year it had outstanding loans aggregating more than \$26,500,000, and during the preceding 12 months it had loaned money aggregating a little more than \$8,000,000, divided among more than 2,500 farms. During the same period it distributed as "dividends" to the local associations nearly \$49,000, and still retained a surplus of over \$250,000. It would seem to be fairly classed as a "going concern." Note again that the bank is a cooperative enterprise, and that this surplus will ultimately be distributed as dividends to the stockholders—that is to say, to those who are its borrowers.

I feel that at present the Federal Land Bank serves a real need in the rural community, and that it will have a far larger field of service when men come to have a better understanding of its methods and policy, which I admit seem at first to tangle with red tape.

HILLPOT QUALITY CHICKS

Sturdy, Healthy Chicks plus June

make the poultryman's ideal profit combination. Take advantage of it and book your order. You can't increase the supply of June days, but you can increase your satisfaction and profits by ordering these extra-livable, hatched-right chicks that come from Hillpot Record Layers.

A Telephone Personality

In your face to face contacts with people, your appearance, your bearing and many other things help you to make the right impression. But in your telephone contacts there is only one thing by which you can be judged—your speech.

An effective telephone personality is to-day a business and social asset. Everybody appreciates the person who speaks distinctly and pleasantly, neither too fast nor too slow, with a clear enunciation of each word, with lips facing the mouthpiece and speaking into it. In business, this is the telephone personality which induces favorable action on the part of the listener. To the salesman it may mean the difference between an order and no order; between an interview granted and an interview refused.

Curiously enough, people who are careful to make themselves effectively heard and understood face to face, often disregard the need for effectiveness in their telephone speech. Perhaps they shout, perhaps they mumble, perhaps they hold the mouthpiece far from their lips. And frequently they never realize that their carelessness has defeated the purpose of their talk.

The Bell System maintains for telephone users the best facilities that science, modern equipment, skilled operation and careful management can bring to telephone speech. But these facilities can be fully effective only when they are properly used.

Dimensions:
Length, 35½ in.
Width, 17½ in.
Height, 26 in.
Weight, 52 lbs.

Make your monthly milk check BIGGER

THE biggest cream check goes to the farmer with the cleanest dairy; the successful marketing of all milk products depends upon absolute cleanliness in the dairy. Whether it is the simplest sterilization of containers, or the more complete cleansing of an intricate milking machine, the New Perfection All-Purpose Stove, with the Giant Superfex Burners, gives an intense and positive heat for the limitation of bacteria.

Its sturdy build, its compactness (only 26" high) its broad porcelain enameled top—easy to move about, easy to clean—quick and powerful heat—makes it of special utility to the dairyman.

But beyond that, its intense heat—as fast as gas—adapts it to a hundred and one uses about the farm and the home.

It is economical to use and easy to keep clean. No coal dust to smudge, no dirt, ashes and kindling litter to clean up,—this is the appeal of the New Perfection All-Purpose Stove to the thrifty and careful farm housewife.

It is useful too in the rush of the canning season, and a necessity in the summer kitchen.

Kerosene is being used more and more as a year-round farmhouse fuel for cooking and heating. Clean, odorless, quick.

Any New Perfection dealer will gladly demonstrate this All-Purpose New Perfection, with Giant Superfex Burners.

A Partnership Possible in No Other Business

Nine Hundred Years on the Same Farm—By Bernhard Ragner

The Purchasing Power of the Farmer

The Farmer as a Consumer and His Effect Upon Business Prosperity

THE American Agriculturist has invited me to take this place on the farm radio program furnished by that paper through the courtesy of WEAf.

The public takes a lively interest in farmers as producers. There is desire to see the food come along, and every year it does surely come. Much advice is offered to farmers and some of it is good. They have the advantage of a good background of experience. If the farmer were not conservative he would not long have a farm. However, science has done great things for agriculture and progressive farmers are demonstrating its value. The public is pretty well assured of an ample food supply.

Its interest should center upon our farming population as consumers, as customers, as users of others' products and services. The farmers, by reason of their number and the nature of their occupation, form the chief body of buyers in this country. Their purchasing power fixes the boundaries of business prosperity. When they cannot recover the cost of production of their crops for a series of years, and impair their capital seriously to keep going, all business necessarily slows down and we have hard times. This fact would be more apparent if the farmer were not a capitalist and could not arrange for credit after a single year of losses. The nature of farming is such that purchases of the necessities in production and of transportation continue for a time despite heavy losses. Credit can be secured and production continues. It results that many in the business world do not realize that their prosperity is being undermined until the demand for their goods and services is seriously cut. The banker, the manufacturer, the distributor, the professional man, the holder of bonds and stocks have a tremendous fundamental interest in the purchasing power of the country's greatest group of consumers—the farmers.

The price paid for food delivered at one's home is no index of the producers' financial well-being, and that it not wholly—nor, it may be, chiefly—the distributor's fault. For one thing, we like things out of season. We pay the freight and stand the waste of strawberries shipped from Florida and ship our berries into New England.

Western Potatoes in New Jersey

The other day in the Trenton, N. J., market I saw shipments of potatoes from Idaho, Minnesota, Michigan and Maine, and New Jersey produces millions of bushels of potatoes that are shipped early in the season as far west as St. Louis. I bought the Idaho potatoes at 3 cents per pound and did not bring a railing accusation against the transportation lines for robbery, but only wondered whether anything was left for the Idaho producer when the potatoes traveled three-quarters of the way across our continent.

In more conservative days we would have bought home-grown potatoes in the fall at one-third the price and stored for use until new potatoes came again. We have learned to be expensive to ourselves, demanding products shipped thousands of miles, and then we wonder if the farmer is not overcharging. Certainly I am not assuming to

By ALVA AGEE

criticize, but only am urging that the producer may not be recovering cost of production no matter what our table supplies may cost, and we need his good purchasing power for any enduring prosperity.

If the farmers could get a fair share of the price paid by consumers they could stay good customers of people in other industries. A difficulty lies in the fact that food production is in the hands of seven millions of men who are naturally inclined to be independent in thought and action. Steel products can be standardized and directed to consumers

ing because the chances are that his own kin are on the home farm. We do not want group government, and we are not asking for legislation in the special interest of a class when we seek it to permit collective selling of farm products, or the creation of banks that can make loans whose maturity will synchronize with the turnover on a farm, or the barring of counterfeiting of honest farm products. Farmers now have a better understanding of their business needs, and being the largest group of customers that other industries have, their increased purchasing power is a consideration second to none in our country's commercial program.

American agriculture is peculiarly dependent upon foreign markets, because we have an enormous amount of productive land and there is a surplus of products that depresses prices unless other countries have good buying power. The day may come when we shall produce no more than we need at home, but there is time for many a man to lose his farm before that day comes. Anyway, we do not want to go back to the mental attitude of the Chinese when they constructed their remarkable wall. We can't build it, and it would not be well for us if we could do so. There is no possibility of making the world boundaries, as far as we are concerned, just three miles off shore around the United States. The misery of the rest of the world would come in as freely as alcohol now does from the rum fleet lying outside the line. I wish everyone could have heard Lord Robert Cecil speak before he returned to England. He made no plea that this country do this, that or the other, but he pointed out that civilization in Europe was so endangered that another war would end it. Naturally he wanted our moral support in the promotion of peace, so that the countries of Europe could come back to a satisfying

life. We cannot have any dependable prosperity until the countries of Europe find a way of recovery, and the parable of the Good Samaritan needs to be read in church every Sunday morning, if only in our own selfish interest.

Some Radio Letters

"We are sending in the radio questionnaire with some suggestions. We had our radio put in in December and we certainly do enjoy it. We live on a farm at the edge of a little inland town where the environment is not just what you wish for your boys, but the hours of entertainment, lectures and many other things that we get over our radio are not only enjoyed by ourselves but by our neighbors also. The class of speakers which American Agriculturist is giving us through WEAf is splendid."

* * *

"In the past I have had considerable trouble tuning in on WEAf, but have found their new wave length the past two evenings very satisfactory. Will watch for American Agriculturist future Wednesday evening farm program."

* * *

"Kindly forward me a copy of the radio talk by Mr. Kenner, entitled 'Pitfalls that Snare Uninformed Investors.'"

Wanted to Close the Patent Office

THE address on this page was delivered by Mr. Agee, who is Secretary of Agriculture of New Jersey, from WEAf station, on May 30th, at 6:30 standard time. It is another one of the talks in the American Agriculturist farm radio program.

In 1812 an employee of the United States Patent Office suggested that the patent office should be closed as there was nothing more to be invented. Every time we take a speaker down to the broadcasting station and hear him talk through the air to perhaps a half million people, we think of the progress that has been made by man's inventive genius since 1812. The employee of the patent office would certainly be a very much surprised man, were he alive to-day. It would seem, with all the machines and mechanical conveniences which we have around us, that we must certainly now be near the limit of invention. Yet, without the shadow of a doubt, the next hundred years will see even more progress than in the past.

Just a few minutes before writing this, we saw a demonstration of lighting by wireless. Between the sending station and an ordinary electric bulb there was absolutely no wire connection; on the other hand, there were a heavy plate glass, several thicknesses of wood, and a thick rubber curtain, all excellent insulators. Yet, when the electric bulb came within a certain distance or "into the field" of the wireless waves, it became lighted. The demonstration showed how electric light waves might be sent from any railroad station or from the train dispatcher's office, lighting signal lights in the engineer's cab of a rapidly moving locomotive, and further, how a train might be automatically stopped by wireless waves, should the engineer, for any reason, fail to respond to the signals.

The possibilities of such an invention speak for themselves, and it is only one of literally thousands of mechanical, chemical and electrical equipment which the scientists are constantly working to perfect. —The Editors.

without much waste, because only a relatively few men need agree upon the whole matter. All the owners of stock in steel works, large as the number is, are relatively few when compared with all the producers of food, and yet what waste and loss there would be in that industry if each stockholder took his share of the product and hunted his own market for it.

Some farmers realize the necessity of acting collectively in standardizing their products and in directing them to market in an orderly way. If the public would encourage such collective action in every way, producers would be brought closer to consumers and the latter would have greater certainty regarding what they were buying, and the elimination of waste would mean better buying power for the farmer.

A Combined Capitalist and Laborer

I have spoken of the farmers as a great group, and some such word must be used when we classify them industrially, but it is puzzling when workers in agriculture are discussed as a class apart from other Americans, and there is speculation regarding their economical and political views. The farmer is a combined capitalist and laborer, and he is of the same blood and family as the banker, the professional man, the merchant and the laborer in the city. The successful city man knows what the farmer is think-

Nine Hundred Years on the Same Farm

An Endurance Record Made by Twenty-four Generations of One Family

YESTERDAY, Monsieur Lacassies Pouban, of Lucgarrier, France, was absolutely unknown in Paris. Nobody knew him. What is more, nobody cared to know him. To-day (as I write) his name is upon every lip. The story of his life is printed in all the French newspapers. He has been decorated by the minister of agriculture of the French republic. He is now a chevalier of the Order of Agricultural Merit.

And why?

Because he and his ancestors are the possessors of what might be called the world's agricultural endurance record. To them belongs the distinction of having lived in the same house, and of having tilled the same soil, for a period of 899 years. That looks like a mis-print, but it isn't, for the family has documents, of undoubted authenticity, to prove that back in 1023, a Pouban owned and cultivated the nucleus of the present homestead.

Since then, dynasties have fallen, kingdoms have been overturned, continents have been discovered, empires and republics have had their entrances and exits on the stage of history, but the Pouban family has remained loyal and true to its original hearthstone.

Undisturbed by the nervous movements of wars, crusades, reformations and revolutions—

Along the cool, sequestered vale of life
They kept the noiseless tenor of their way.

Joan of Arc chased the British invader from the soil of France, but the Poubans plowed their fields. John Calvin wrote his institutes and stimulated the reformation started by Luther and Zwingli, but the Poubans sowed their wheat. Christopher Columbus discovered America, but the Poubans harvested their grain. Jean Jacques Rousseau preached his revolutionary doctrines; the French Revolution came, Napoleon Bonaparte, like a gigantic comet of unexampled brilliance, flashed across the European sky, but the Poubans, serenely, loyally, wholeheartedly, cultivated the acres which

By BERNHARD RAGNER

the thrift and ancestors had bequeathed them.

If Mademoiselle Pouban studies English in her high school course, she will become acquainted with Alfred Tennyson's "The Brooke." Should she be inclined to parody

Don't Miss This Story

THIS fine story was sent to us clear from France. It is the most wonderful record of human service by one family that we have ever read. A few of our farm families pride themselves on living on the farm that has been in the same family since Colonial days. But the Pouban family was faithfully cultivating their farm four hundred years before the first white men set foot in the American wilderness.

—The Editors.

his much-quoted lines, it would likely be as follows:

Monarchs come and empires go,
But the Poubans go on forever.

And with commendable industry and persistency, they have been "going on" since the year 1023, at least. The family records do not go back any farther than that. Ever since that year, however, long before William the Conqueror ever thought of invading England, the Pouban family has been cultivating the same corner of God's green earth. How the first Pouban (of record) came into possession of his homestead is not known; possibly by inheritance. But he must have been a man of uncommon sense, for he began the family register with these words:

"Within these pages, I shall register the names of the household chiefs of our family, their wives, the dates of their birth, of their marriage, and of their decease.

"And I pray those who succeed me to continue my work."

Then follows a curious list of names and dates, written on paper that is yellow with age, with ink that grows dimmer with each passing year. Part of the record is barely decipherable. Because of its archaic language, its length, and other characteristics,

it reminds one of the genealogical lists printed in the Bible.

"I pray those who succeed me to continue my work." So wrote the first Pouban, and until the present day, his numerous posterity has kept the faith. His children and his children's children have continued his labor. Pouban I (he was a veritable monarch of the

soil; why not give him his title?) little realized that Pouban XXIV would be decorated in 1923 with the Croix du Merite Agricole (Cross of Agricultural Merit) because of this "most marvellous example of fidelity to the land that a strong and serene peasantry can give to a country of which agriculture, as Sully said, is the nourishing breast."

As the centuries passed, history was made at Hastings, Agincourt, Waterloo, Gettysburg and

Chateau Thierry, but the Pouban family (except for their soldier sons) remained at Lucgarrier, on their farm in the department of the Basses Pyrenees near the Spanish border. They devotedly worked the acres which their forefathers had left them. In fact, their industry was such that the family homestead increased, until now it includes 80 hectares (approximately 200 acres). And all the while, they kept the family records straight.

Each generation contributed its portion of labor. Each generation expended its portion of sweat, and transmitted the heritage—enlarged and improved—to the next in line. Only once did a Pouban desert the ancestral domain, and that was only temporarily—to make his fortune in America! But he returned later, and continued his father's work.

The present Pouban is the twenty-fourth in the ancestral line. He is a fine example of the French farmer—strong, self-controlled, a capable artisan of the soil, and passionately devoted to his home and his country. He is the mayor of his township; and his son, now rendering his eighteen months of military service to France, hopes some day to assume his father's ancestral and civic functions.

VOL. 111 June 2, 1923 No. 22

The Agricultural Outlook

THE United States Department of Agriculture says that the general agricultural outlook now is probably the best it has been in three years. "The domestic market for farm products is reported to have been improved immeasurably as a result of the increased prosperity in urban communities. When labor is fully employed and wages high, farm products find a readier sale and better prices. This is what has helped sustain the prices of hogs this spring; likewise, lambs, cattle, dairy products, eggs and many vegetables. The outlook for next fall and winter is considered to depend upon a continuation of the present industrial boom in the city."

Professor G. F. Warren, the well-known farm economist, says that farm prices follow about fifteen months behind those that prevail in other business; that is, if city prices go up, farm prices will presumably follow about fifteen months later. This is evidently what is happening now. High wages and high prices prevailed for some time in the cities before the farmer could begin to feel the effect. He is, therefore, just beginning to get some small results from the present urban prosperity. This is evidenced in one way in the milk prices which prevail in eastern territory. For instance, the League net pool price for April of this year is \$2.07½ per hundred, which is \$.74 higher than the corresponding price for last year.

The labor shortage will be a factor in farm prices, but while there is a large shortage its effect will be comparatively small because farmers and their families will work harder themselves.

Dr. Warren qualifies all of his statements about future production and prices by the word "presumably," for he says that it is possible for weather conditions to upset entirely all forecasts of future production. All other factors affecting production are insignificant in their effect compared with weather. For instance, even a very great labor shortage would only make a difference in production or prices of four or five per

cent; while a large rainfall or a small rainfall might increase or decrease production as much as twenty per cent.

We have been very careful in anything we have said in regard to the future, to be conservative in not painting too rosy a picture, but there are some indications now that if the weather does not interfere and if the farmers have not over-planted, there will be more farm dollars and therefore more farm purchasing power this fall than there have been in several years. Let us all hope and pray that this may be the case.

The Losses With the Profits

NOT all years are good years, even with the middleman. This fact that must be taken into account when farmers try to market their products themselves through cooperative organizations. There are bound to be bad years, with losses which the best organizations in the world cannot prevent.

Last year was such a year in the fruit business. Many of the dealers who handled peaches, pears, plums, prunes and early apples in western New York lost money on them. There was a heavy crop and most of it had to be packed and shipped within six weeks. The railroads were just coming out of a big strike and there were, therefore, delays in transit. Markets were heavily supplied and nearly all of these markets gradually declined.

The dealers covered such losses by taking it out of the winter fruit which they handled later, or out of profits earned in previous years. Cooperative associations, such as the Western New York Packing Association, must do the same thing. If the dealers lose money on a season's deal, the cooperative may also lose. Perhaps if they have better methods they will not lose quite so much. On the other hand, if the dealers make money it is reasonable to assume that if the cooperative has good management and efficiency, it will also make money. The success of marketing through cooperation, therefore, cannot be judged upon one year's or even two years' operations.

Going After the Cows

ONE Sunday afternoon in early June, Uncle Sam Farmer roused himself from his chair on the sunny side of the porch where he had been cat-napping, to go after the cows. With a walking stick, which served both as a cane and a cow accelerator, he crossed the creek bridge, passed through the lane bordered on both sides by apple trees in blossom, and began the long hill climb to get the cows out of the farthest corner of the back pasture. Closing our eyes we can see him in imagination, swinging his stick and with bowed head slowly climbing the hillside cow-path, turning every now and then to look down across the fertile valley whose productiveness and beauty his own hands had helped to make possible.

As he sat a few moments to rest in the June sunshine, was he thinking bitterly of his long spell of sickness and of the quack remedies which the would-be farm doctors had prescribed; was he thinking, do you suppose, of the hard times through which farmers had passed and were passing? We believe not. Memory has a nice habit of glossing over past troubles and emphasizing the more pleasant of life's past experiences. Besides, the surroundings did not lend themselves to bitter thoughts. No, we think it more likely that Sam might have been recalling that time when his father as a very little boy had come with grandfather and grandmother on an ox-sled into this valley—that time when the nearest settlement was forty miles away, when timber wolves still ran in a virgin forest which stretched, with few cleared spaces, one hundred and fifty

miles to the Hudson Valley. Or maybe he was remembering that other spring Sunday back in '61 when he had started after the cows and had come back four years later after doing his part to make Appomattox possible. There had been quite a spell then when someone else had to get the cows and milk them.

Maybe he remembered, too, how uneasy and dissatisfied he had been with the quiet life of the farm after the excitement of the Wilderness fights, Gettysburg and Winchester, and could, therefore, sympathize some now with Young Sam who thought the old farm pretty slow and was considering going off to the city.

As he looked down across the pasture which the blossoming dandelions had made into a field of cloth of gold, perhaps the thought came of all the changes that had come into this quiet valley and into the world in the span of only three generations of men. In the place where the forests had once stood not so long ago, he saw with some pride the dark green of the young clover seeding, bordered by the bare fields of newly planted corn and potatoes which he and Young Sam had just put into the ground. Next were the acres of oats just beginning to cover the ground, and on farther, near the farmstead, blossomed the orchard where a million bees testified to the goodness of the work of the Sam Farmer the First, who set the trees in their orderly rows.

As Sam looked down across the valley that Sunday afternoon, upon his handiwork and saw that for the most part it was good, we are sure he was thinking that he was glad that his life, even with all its sacrifices and hard work, has been cast among the pleasant fields of this farm valley, and that he could make no better wish for Young Sam than that he would stay with him on the old place and "carry on."

Have They Kicked Yet?

A CORRESPONDENT writes: "I think we farmers have a habit, whether we sell milk, potatoes or apples, of not raising the standard and quality of our own goods voluntarily, but always waiting until the customer kicks on the poor service or quality."

There is much truth in this statement. The New York City milk shed, that is, all the territory within fluid milk shipping distance of New York City, is probably the best and most prosperous dairy section in the world, producing a quality of fluid milk which is not equalled in any other place. This state of affairs, which is desirable from both the consumer and producer's standpoint, exists not because most of us as farmers voluntarily fixed up our barns, but because we were forced to, if we were to stay in the business of shipping fluid milk to the city.

All of the grumbling and cursing that has been done by farmers because they were obliged to remodel and clean up their stables would fill a library. Some of this grumbling was, of course, justified because of unreasonable and foolish requirements, but in principle, and in the main, the requirements were right; and there are mighty few dairymen, who, having once cleaned up and placed their barns in a position so that clean, high quality milk could be produced in them, would go back to the old way even if they could.

One of the chief ways in which the cooperative associations are going to help the marketing work of farmers is in recognizing the fundamental principle that good selling is based upon the production, grading and packing of high quality, clean products. Having once put this principle into effect, such products will almost sell themselves.

If it is Farm News, you will see it in the American Agriculturist.

A Review of New York's 146th Legislature

What Was Accomplished at Albany of Interest to Farmers

By BURT MILLER

*Representative, Legislative Committee
New York State Farm Bureau Federation*

THE one hundred and forty-sixth session of the Legislature of the State of New York which closed recently, accomplished nothing of great importance to farmers. The rural school bill doubtless claimed the keenest interest among farmers and farm organizations and the \$500,000 appropriation for a coliseum to make the national dairy show a possibility had concerted support from all the agricultural bodies of the State. There were other bills in which the farmers' representatives at Albany were interested, but there were none with which they were vitally concerned except the O'Connor bill, which events proved to be but a flash in the pan.

The distinctive feature of the session, from the farmers' point of view, was the unanimity of action displayed at all times by the farm leaders. Early in the session their ability to work together for the common good was tested with the request for a \$500,000 appropriation for the coliseum and stock judging pavilion at the State Fair grounds in Syracuse. The National Dairy Show had been secured for New York State for the first time on the promise that suitable facilities for housing the exhibits and stock would be furnished. A coliseum was essential. The fruit men had long wanted a new horticultural building at the fair and were reasonably sure of getting it this year until the need for the coliseum arose, but they generously withdrew their claims and gave their cordial support to the coliseum project, as did every farm organization of the State. The bill was introduced on February 14 and signed by the Governor on February 26. The addition of the coliseum to the fair grounds makes possible the bringing to New York of the greatest dairy event of the year, one which promotes the dairy industry and teaches more efficient dairying.

Rural School Bill Defeated

The failure of the rural school bill was a great disappointment to many, but is in no way considered final. This measure is so well known that it scarcely seems necessary to mention its provisions. On April 25 it passed the Senate. On April 26 a hearing was held, which while not the largest ever seen in Albany was certainly one of the most representative. When Enos Lee, president of the farm bureau federation, marshalled his forces in defense of the bill, he was able to call on a representative of nearly every farm organization in the State. The Grange, the Dairymen's League, the Farm Bureau Federation, the Home Bureau Federation, the Horticultural Society, the Grange League Federation Exchange, the Cooperative Council, and many local organizations of farmers had a man or a woman—or a whole delegation—present to support the measure. Only four men advanced objections to the bill, speaking as individuals.

Supporters of the bill were quite confident of its passage after the hearing, but it failed to be reported in the assembly after conference. The up-State legislators expressed their belief that the bill was all right, but that the rural school patrons were not yet ready for the changes provided.

Five Million for TB Eradication

The budget as it was finally made up carries most of the appropriations which farmers wanted, though not always the exact sum asked for. In the closing days of the legislature appropriations for \$20,000 and \$10,000

respectively for the New York State exhibit at the dairy show in Syracuse, and the fruit show in New York City, both to be held in the fall, were passed. \$30,000 was asked in each case.

It required little effort upon the part of farmers to secure the support of the legislature and Governor Smith for an appropriation to continue accredited herd work because it affects so many people and its importance is so universally recognized.

The Governor changed the policy of the State in regard to the payment of indemnities for cattle slaughtered under the accredited herd plan by appropriating \$2,500,000 to pay

Ku Klux Unmasked

WE know you will be interested in Mr. Miller's excellent article on this page reviewing the accomplishments, and lack of them, of the New York State Legislature on agricultural legislation. A few of the other bills not strictly agricultural, but of general interest to farm people, which the legislature passed are the Mullan-Gage Repeal Act, the act unmasking the Ku Klux Klan, the Sheppard-Towner Enabling Act, and three other bills, giving women more property and family rights.

The Mullan-Gage Repeal Act, which removes the State support of the national Volstead Prohibition Act, has not been signed at this writing by Governor Smith. The Ku Klux Klan Act makes it illegal in New York State for that organization to carry on its activities under a mask. The Sheppard-Towner Enabling Act provides for taking advantage of the national Sheppard-Towner Enabling Act for the protection of maternity and infant welfare.—The Editors.

claims up to July 1, 1923—all of which was owed by the State to dairymen and breeders—and an additional \$2,500,000 for the next fiscal year. In the past when a farmer had his cattle slaughtered under the accredited herd plan he was obliged to wait until toward the end of the fiscal year when State indemnity money was appropriated. Under the new plan indemnity money will be paid immediately to the breeders, a system much more pleasing to them. Governor Smith and the legislature are to be congratulated on this change to a pay-as-you-go plan.

Might Have Caused Farmers Uneasiness

The one measure which might have caused the organized farmer some uneasiness was the O'Connor Bill, introduced by Assemblyman O'Connor of New York and Senator Sheridan. It was a bill amending section 340 of the general business law by making prohibition against monopolies apply to co-operative associations of farmers, gardeners, dairymen, and fruit growers and not apply to the labor of human beings and the right of workingmen to combine in unions not organized for profit. This bill passed the Senate, and went into the general laws committee in the Assembly. A motion was made to discharge this committee and put the measure in the judiciary committee, of which Assemblyman O'Connor was a member, but it failed of passage. The bill was not reported out of the general laws committee.

The farm bureau federation interested itself particularly and was largely responsible for the passage of a measure bringing about a reduction of the truck license fee from \$16 to \$12 on half-ton trucks. This of course affects directly farm trucks—for most of them come in this classification—and means an annual saving of an appreciable amount of money to the farmers of the State.

A number of bills were introduced which were concerned with the maintenance of

State highways, bridges, and the like. At the present time the bridges on State highways are built and kept up by the townships, and bridges originally intended for neighborhood traffic only now are called upon to bear the heavy trucks used in State and interstate traffic. A bill was introduced providing for the State maintenance of these bridges on State highways. The Senate claimed it had insufficient information to act, so a joint committee was appointed to secure facts as to the number and kinds of bridges located upon the highways and report back to the next legislature when it is believed that favorable action will be taken.

All the farmers of the State interested in the development of agriculture have felt a friendly concern to see the building program of the college which was laid out some ten

years ago, go into effect. In 1913 the legislature authorized the drafting of plans for buildings at the college of agriculture, but the war brought construction to an end. In 1920 a bill was passed authorizing \$3,000,000 for a building program and \$500,000 was appropriated for immediate construction. This amount was used for a dairy building, now almost ready for occupancy.

The legislature this year has definitely recognized and continued that program with an authorization of \$500,000 to begin construction on a plant industry building. The question of the legality of authorizing construction of State institutions in excess of appropriations actually made, which was raised by former Gov-

ernor Miller, was covered by an opinion of the present attorney general holding that under certain circumstances such authorizations were legal and that the conditions surrounding the authorization of 1920 for the college of agriculture came within the requirements of legality.

In addition the college of agriculture received \$41,000 for new positions—about half of them for the department of dairy industry to take care of the new lines of work made possible by the new building; the others scattered through various departments and representing needs long felt at the college. An appropriation of \$25,000 for increasing salaries at the institution was also passed.

An appropriation of approximately \$63,000 for contributions to the farm and home bureau work, previously made by the department of farms and markets, was transferred by the legislature to the college of agriculture. This transfer is in line with the change made last year in the law, placing full State responsibility for this work with the college.

Geneva Bill Passes Both Houses

The Witter bill passed both houses after considerable controversy both inside the legislature and outside it. It adds a new section to the education law and repeals sections 280 and 283 of the farms and markets law providing for the administration at Cornell University of the State Agricultural Experiment Station at Geneva.

The scientific staffs and trustees at both Geneva and Cornell gave full endorsement to the measure and it was supported by the farm bureau federation and other farm organizations. It is believed that the passage of the bill will make for efficiency and less duplication of effort in the two institutions and free some of the facilities of each for additional research work. The bill was lost on

How I Grow Melons

Improving the Variety Simplifies Marketing Problems

THE Eden Gem cantaloupe has been

By T. M. SMITH

never cultivated or handled while wet.

grown successfully in this section of New Jersey for a long time. The first grown were planted for family use. The best specimens were selected for seed and it was soon noticed that this home raised seed were much superior to the original stock. From these seed came the Improved Eden Gem cantaloupes. The melon is large with a rough coarse coating, which we call a net. The flesh is thick, green in color, but very sweet.

When I began with this variety there were seldom any standard sized melons, mostly Jumbos and once in a while one would be too large to pack in this carrier. A larger carrier was required for these, so the Extra Large carrier was made; the heads 16 inches square and the slats Jumbo length. This held 45 melons. By carefully selecting the largest, heaviest netted and sweetest melons year after year, about half of the crop is the Extra Large. Unless great care is taken in saving seed from only healthy well netted specimens the net will get lighter each year until the seed will run out.

Selecting the Seed

We like to get our seed from the first set of fruit, not necessarily from the first to ripen but those large, heavy, juicy fellows that bring the top prices. We can't keep our best melons and sell them at the same time, but it pays us to save the seed from only the best—first, last and all the time. Whether buying or saving seed, get the best, deal with a reliable seedsman and pay the price of good seed. Don't wish you had.

The sandy loam soil produces the finest melons. The heavier soils may sometimes grow them slightly larger but of inferior quality. Stable manure is applied broadcast at the rate of from 10 to 20 tons to the acre. When compost is used, this is put in the row. If cantaloupes follow sweet potatoes which have been manured, they do not require as much as if the crop were corn with no manure. After potatoes, the land is double-disked in the spring, cutting the vines so that they do not interfere with cultivation. The acme harrow follows until the land is fine and level, when the rows are run out 5 feet apart.

Laying Out the Patch

If the manure has been broadcasted, chicken manure is spread in the row. The rows are then covered with two light furrows and allowed to stand until just before planting time, when a light slab drag is run over the list to smooth the rows, giving fresh soil in which to plant, killing many weeds, and saving much handwork later. A marker is run cross-wise of the rows making the hills 3 feet apart in the rows. This distance has proved to be the most satisfactory after years of experimenting for the Improved Eden Gem as grown on our farm. The seeds are then planted about 1 inch deep, from 10 to 12 seeds to the hill. If the weather is cool or unfavorable another planting is made one week later. We think it is better to waste a few seeds than it is to have an irregular stand.

As soon as the plants are up they are dusted with air-slaked or hydrated lime. Several days later they are either dusted with an insecticide, or sprayed with arsenate of lead and Bordeaux. When the plants have three or more leaves, Black Leaf 40, sometimes is added to kill the aphids. This spraying or dusting is continued until the melons begin to net.

Thinning the Plants

We leave only one strong healthy plant to the hill. This will cover half of the row on each side. The roots have a better chance to feed than if there are two in a hill. Shallow level cultivation is regularly given, but the ground between the hills is cleaned with the hoe. When the vines prevent cultivation they are trained away from the middle of every other row so as to leave a space for the pickers to walk without injury to vines. The vines are

When the cantaloupes will slip the stem, that is, will leave the vine without breaking it, is the proper time to pick them for market. If picked before, they will not ripen as they should, but if the melons are for home or local use, they may be left on the vines until they yellow. Pick a green cantaloupe one week before it would slip the stem and one that will slip the stem and put them both on ice for several days, then compare the two and you will get some idea of how the customer feels when he gets a green one. No matter how much sugar you add, will not make it taste as it should. This is one cause for the glutted markets.

Harvesting and Grading

The cantaloupes are picked each day except Sunday. One grade consists of the large heavy fellows with the rough jackets whose meat is good to the rind and when you get one you want more. The very fragrance before they are cut makes the mouth water. The other grade is fed to our hogs who do not grumble at the inferior quality but often squeal for more. Quality rather than quantity is the aim, for the best grade will sell for more than the culls and run of the crop mixed and sold. Some of our fruit would get too ripe to ship from Saturday to Monday, so I developed a trade in town. This takes care of the over-ripe fruit but now they get several carriers of this each day so there is no loss, but has helped advertise them. A nearby hotel is a regular customer and the guests often order cantaloupes to either send or carry home with them.

Selling Direct

The Improved Eden Gem has commanded a premium on the New York market for a long time and most of them were shipped to one firm until several years ago. The rainy weather ruined most of the cantaloupes in this section but the Improved Gem were good. The market declined until there was no profit in shipping and we were about half through picking. A loss stared us in the face. I took a load of my best ripe cantaloupes to town and was told that I couldn't sell them before I went. I laughed with them and told them we would see who was right.

The first house where I stopped told me nothing doing. but I offered to give them one if it was not as I said it was, without charge, but if it was they would take a basket. I soon sold out all I had and went back each day as long as the season lasted, getting 50 cents per ½ bushel basket for them. Meanwhile the cashier of the bank heard of my success and when he received an inquiry for cantaloupes gave it to me. I filled the order, and have had that customer ever since, and he has been the means of my start in direct selling.

One Brings Another

Each customer is asked to send the name and address of any friend who would like to get good cantaloupes and some write while others do not. But the bible says, "Ask and ye shall receive" so no harm is done. The bulk of our trade comes from satisfied customers so that now we ship practically all of our melons direct. Our terms are cash with the order which gives less bookkeeping than otherwise. If it is impossible to fill the orders for any reason the money is refunded immediately. A good name is not made in a day, but if we were to ship inferior cantaloupes the trade would get them, where they could depend on the quality. This is the way we hold our trade and add to it year after year, ship good fruit that is backed by the reputation of the farm. We have a good strain and stick to it, but are always trying to improve it and aim to produce the best melon grown. We have had hail storms that ruined the crop, squash bugs that made them ripen too soon and other incidentals too numerous to mention, but so far each year, has showed a profit growing these delicious melons.

Alfalfa—The Comer

Why Do Not More Farmers Grow It?

NEVER had I this question so forcibly

By W. C. SMITH

A breeder of Poland China hogs once came

impressed upon me as I had it a few years ago. I found myself with a surplus of alfalfa hay, and as soon as the fact became known, my farm at once became the Mecca for an army of seekers for the best hay and feed grown upon the American farm. And they did not come from the city alone, the majority came from the farms nearby and as far as 10 miles away. My supply was exhausted before one-tenth of the seekers were satisfied, and those who were satisfied left behind a good price for the succulent feed they took away with them.

And yet there was not a single one of those farmers who came to my farm for alfalfa hay, who could not have grown alfalfa upon their own farms.

A few years ago my son and I went up into Wisconsin to purchase some

Guernsey milk cows to coin our alfalfa hay into gold dollars. We went to a district where the dairy business was pre-eminent above every other branch of the business of farming, and where every farmer was keeping from 10 to 150 cows. Of course, we inquired about feeds for cows, and to our delight, alfalfa in every instance was placed at the head of feeds. And yet, in our trip over a large portion of the State we did not see 50 acres of alfalfa.

The last dairyman we visited had a herd of 150 cows, housed in a barn equipped with every convenience necessary for his business. He had a splendid farm and I saw that it would grow alfalfa. I asked him about feeds for cows and he replied as follows:

"Smith, for dairy feeds, alfalfa has every feed backed clear off the map." "Do you grow it?" I asked.

With a smile he answered; "Yes, but only in a small way. I buy all I need."

I again asked; "Can you grow it upon your farm?"

Knowing that I had written a book upon alfalfa, he looked at me as though he was wondering why I should ask such a question, that if I knew the business of alfalfa growing I ought to be able to tell whether his farm would grow alfalfa without asking him. But he answered the question and I have not yet been able to figure out why he did not grow all he needed instead of paying from \$30 to \$40 per ton F. O. B. shipping station as he was then paying for alfalfa hay. This was his answer.

"Yes, I sure can grow it. Have grown as high as seven tons to the acre in one season from three cuttings."

Of course, I could not help asking him the question: "Well, why don't you grow all you need when your land is so generous in its production, instead of paying the fancy prices you are now paying for it?"

He didn't make a satisfactory answer to the question. And here was a farmer that needed a lot of alfalfa hay, he had ideal land and plenty of it upon which to grow it, he had a lot of manure to stimulate its growth, and at the time we were talking I could hear the noise of a large limestone crusher, not a mile away, that was crushing into agricultural lime some of the best limestone for agricultural purposes found in any State.

500,000 Acres By 1934

THE greatest and most far-reaching revolutions are those that come so gradually and so silently that little attention is paid to them.

In 1900, there were only 5,582 acres of alfalfa in New York State; in 1910, this acreage had multiplied better than six times to 35,343 acres; and in 1920, the acreage had increased to 119,783.

Great progress has been made in developing northern grown seed, and in finding varieties with a spreading root system which will withstand our northern winters. With this progress it is safe to say that New York State alone will undoubtedly have in another ten years better than 500,000 acres of alfalfa.

The coming of this legume will mean much to farmers. When once established, with hardy seed and with winter resisting qualities, a field of alfalfa is good for ten years or more, with at least three crops a year. Compare this with what can be accomplished with clover and timothy; then remember that there is nothing the farmer can grow that can approach alfalfa in feeding qualities, and add the fact that every year alfalfa is in the ground the soil improves, and you will see why a large acreage of alfalfa in every community will so greatly add to farm prosperity.—The Editors.

40 acres had been doing, and it would be a lot better hay, too.

I picked out where the test should be made and ten acres were sown to alfalfa in August, 1921. Last summer the ten acres produced three full crops of fine alfalfa hay, and the croakers were put to route. Alfalfa will be one of the best crops grown upon that farm, while I am in control of it at least.

It will not do to say that our farms will not grow alfalfa, for most of them will, and there is hardly a State in which it will not grow. If then its growing means more and better feed for our live stock, and more money for the farmer who grows it, why isn't more of it grown?

15,000 lbs. per Year...

is the amount of milk any good grade Holstein ought to produce if properly fed.

7,470 lbs. per year was the average produced by a dozen or so good grade Holsteins on alfalfa hay and corn silage alone.

It was an interesting experiment. But can the man who milks cows for a living afford to follow this sort of practise? Is it the sort of practise that buys his shoes and lifts his mortgage and sends his son to college?

Look at it this way: one sack of Diamond Corn Gluten Meal contains as much protein as half a ton of the silage-alfalfa ration. Are you going to get 8,000 lbs. more milk each year from each cow, by investing a little money in feed, or are you going to "save" that feed cost and let the 8,000 lbs. go?

~ ~ ~ ~

DIAMOND Corn Gluten Meal and Buffalo Corn Gluten Feed are two economical milk-making feeds that have proven themselves on thousands of farms.

The Reasons inside the hard-shell fact

There is something goes into the Silvertown Tire from which the farmer reaps service. It is as real as the seed that goes into the ground from which grow his crops.

You see it in Silvertown's rugged body—tough, slow-wearing, anti-skid tread—and side-walls extra fortified with tread rubber to protect them from the road ruts of dry, hard-pan weather.

The experienced farmer invests in quality in whatever he buys for the farm, with a weather-eye on the ultimate cost.

That's why he should buy Silvertown, the tire with a pedigree.

Muckland Makes Money

But "Muckers" Also Have Their Sorrows

THE great ice sheet that centuries ago covered the northern part of our country gave the vegetable grower of the present a rich asset. It happened like this. In one way and another the glacier gouged out hollows, dammed valleys, and piled debris about ice-masses which later melted. All of these processes resulted in the formation of ponds and lakes. Thousands of which still remain to lend an incomparable charm to the countryside.

PAUL WORK

Others have been gradually filled by plants which grow and die leaving their remains but partially decomposed beneath the water which keeps out the oxidizing air. Not a few ponds may be found to represent even now the various stages in muckland building.

While muckland gardening is intensive, highly specialized and almost diametrically opposite to the methods of the general farmer, these areas are responsible for no small proportion of the 36,000 farmers in New York who are recorded as growing miscellaneous vegetables to sell. A farmer passes a few of the patches where the vivid green of celery or lettuce stands out against the dead black of the muck. An inquiry or two brings him stories of large returns per acre and he says, "Why, I have four or five acres like that." In hundreds of cases this is the beginning of a venture in a new style of farming, frequently successful, often not. Chances are much better if nearby "muckers" have established outlets for the produce and have become skilled in the practices.

Clearing Is a Big Job

The clearing of muckland is a big job. Growth is often dense and a world of roots and snags must be eliminated. Often the grade is bad and some years are usually required to bring it into good shape. Lands overgrown with deciduous trees such as elm, ash and alder, usually yield a better muck than those covered with conifers such as tamarack and arbor-vitae or white cedar. Clearing is often taken as a winter job and Italians are sometimes offered the privilege with the understanding that they are to grow and own the crops for the first two or three years. If one is willing to develop the land somewhat gradually, corn makes a good first crop. This may be followed by potatoes for seed and then it should be ready for one of the vegetables.

The leading muckland crops are celery, lettuce and onions, though carrots and spinach are also planted. Of the three leaders the onion is the most staple. Maturing at one time, and being less perishable, an isolated grower can more readily find market facilities for this than the others. Lettuce is very much of a gamble, both as regards the crop and its sale. Unfavorable weather may ruin a fine looking patch almost over night. Prices fluctuate widely on the various markets and the high quoting city is usually speedily made a dumping ground. The Empire State Vegetable Growers' Association is composed of four associations of lettuce growers and its officers are looking forward to the building of a State-wide system of distribution.

Setting Late Cabbage

The middle of June will find Central New York farmers busy setting cabbage. There are many factors to consider in deciding on the date. Domestic cabbage and Danish for fall shipment may be set a bit earlier than cabbage to be stored. Much more is lost by failure of heads to fill out and make full weight than from bursting. If heads tend to burst, a careful twist will loosen the roots just enough to check them without causing them to wilt. Another way is to set in a spade beside

the maturest plants. Too early setting occasions some danger from maggots after they are in the field.

Cabbage may be set by hand, by hand transplanter, and by transplanting machine. The former is as good and probably as cheap as any, but the general farmer does not like to work that way. The two horse machine requires a large crew if it is to be kept going steadily—three on the machine and two men with another horse to keep it supplied with plants and water. The hand transplanter which drops a wee bit of water at each root, is in high favor with many growers who claim that two men setting and one serving can keep up with a machine crew, and do a better job with less replanting.

When the seedbed is screened against maggots, the cover should be removed a week or ten days before setting to permit the plants to harden off.

Cutworms

The cutworm is a selfish fellow. He takes a bite out of the stem of a plant, near the surface of the soil and leaves his victim prostrate and beyond recovery. He is fond of tomatoes, muskmelons, cabbage and in fact a wide variety of garden crops. He seems to prefer those that are tender and succulent. Hence thorough hardening appears to be a factor. Cutworms are worse after sod, and fall fallowing is recommended to discourage the laying of eggs. The best control measure is the use of poisoned bran mash made by mixing dry, twenty pounds of bran with one pound of paris green. Two quarts of a cheap syrup are dissolved in three and a half gallons of water and with this the bran is moistened. The mash is dropped late in the afternoon near the plants or along the row of closely planted crops. On limited areas, a careful search is not without value. Well does the writer remember the instruction of a well-known Jersey gardener who taught him how to find a tiny ridge near the melon plants that had been felled.

Nine Hundred Years on the Same Farm

(Continued from page 467)

Through all the centuries, it has been the humble farmer folk, like the Poubians, who have made the history of France so glorious. Without them, the beauties of Versailles, the glories of Paris, the wonders of French literature and art, would never have existed. It is they who sow the grain and harvest the wheat that feeds France. Unspoiled by the vice and hypocrisy of cities, they have cultivated their fields, exemplifying the cardinal virtues of sobriety, industry and loyalty. Ignoring the lure of the unknown, the appeal of adventure, the charm of the far away, they remain in their own little corner of France, performing each daily duty as it comes. Perhaps they lack polish, wit and charm, but they are rich in the qualities which caused Goldsmith to write:

But a bold peasantry, their country's pride,
When once destroyed can never be supplied.

During the World War, it was they who furnished the poilus that kept the German at bay during two and a half years before youthful America entered the conflict. They go piously to the church on Sunday. They provide the man-power, which in turn produces the money, necessary for the establishment of government, the encouragement of art, science and literature. In their hearts, there is no lust for power, no exaggerated ambitions, no hankering for the unattainable. And it will be a sad day for France if they ever disappear. Having peace, work, a humble home, something to eat and drink and wear, they are content.

To them may be applied the words written by Cato, the Roman, even centuries before the first Poubian: "The agricultural population produces the bravest men, the most valiant soldiers, and a class of citizens least of all given to evil designs."

League Prices For June \$2.33

New York Farm News

THE Dairymen's League Cooperative Association, Inc. has voted the following prices for the month of June:

Class 1, for fluid consumption, \$2.33.
Class 2, for cream and ice cream, \$2.05.

Class 3, for milk used chiefly in the manufacture of evaporated, condensed and powdered milk and hard cheese, a differential of 65 cents above the price of milk going into the manufacture of butter.

Class 4, for milk used in the manufacture of butter and cheese, will be determined by the New York market quotations on these commodities.

Several changes have been decided upon in handling milk in classes 2, 3 and 4. Class 2 has been subdivided into three parts and differentials have been determined depending on the method in which the by-products are disposed of. By more efficiently disposing of by-products it is expected higher prices will be experienced by the farmers. This is particularly evident in class 3, which carried a differential of only 57 cents last month.

NEW YORK TO RIVAL FEDERAL EXHIBIT AT NATIONAL DAIRY SHOW

An exhibition showing in detailed form the value and importance of the New York State dairy industry is being planned by George E. Hogue, deputy commissioner of farms and markets for the National Dairy Show. Mr. Hogue completed an inspection at the State fair grounds yesterday to determine space requirements of the exhibit.

A graphic panorama of the State industry that will rank in completeness and beauty with the \$25,000 government exhibit is planned by the State. In it New York's reasons for claiming leading place among the States in the industry will be brought out.

An appropriation of \$20,000 to cover cost of the exhibit was made at the last session of the Legislature. The bill has not yet been signed by Governor Smith, but farm leaders have little doubt he will do so, for he urged its adoption in a special message.

One of the features of the exhibit will be an exposition of the State's work in protecting its citizens by a campaign to free its dairy cattle of tuberculosis.

Another feature, which will probably be incorporated, is the importance of increasing individual yield of dairy cattle in the State.

LEAGUE TO LOCATE PLANT AT FORT EDWARD

Officials of the Dairymen's League at a recent meeting appropriated \$30,000 for a plant in Fort Edward, Washington County, N. Y. Several options have been taken on property in the village. The owners of the local (Morrisanna) plant have been approached with a proposition to sell their plant to the League. It is understood that if the local owners do not sell, the League will take up one of their options here and build a \$30,000 receiving station similar to the one just completed in Cambridge.

The option that meets with the approval of the officers, who have been over the ground, is the old electric light property. This with land adjoining would give the desired size and in addition would have the accessibility of sewers and railroad siding.

POTATO GROWERS TO TOUR LONG ISLAND JUNE 20, 21, 22

Seed potato growers from New York, Maine, Vermont, Wisconsin, Minnesota, Michigan, New Jersey and other seed producing areas and Canada will be represented on the annual Long Island potato growers tour which starts from Mineola, Nassau County, on June 20, 21 and 22.

The tour offers seed potato growers an opportunity to establish direct personal contact with one of the greatest

seed potato markets in the world. Estimates based on Census reports indicate that last year Long Island farmers grew over 35,000 acres of potatoes with a total production of approximately 7,000,000 bushels, about 20 per cent of the entire New York State potato crop. Considering the fact that Long Island potato growers depend almost entirely on other sections of the country for their seed, a market for nearly 500,000 bushels is thus opened to seed potato growers.

The tour consists of a two-day trip through eastern Suffolk County. The third day consists of visiting potato growers in western Suffolk and Nassau County.

NEW YORK HAS LARGER DELEGATION AT NATIONAL HOLSTEIN MEETING

New York State will be represented at the National Convention of the Holstein-Friesian Association of America, to be held at Cleveland, Ohio, June 6, 7 and 8, by the largest group of official representatives. The New York delegation will include 23 members. The next largest group will be from Wisconsin, which has 19 delegates.

The New York delegates are: C. F. Bigler, president of the New York State Holstein-Friesian Association; C. L. Amos, Syracuse; Dr. D. B. Armstrong, Watertown; Ward W. Stevens, Liverpool; H. F. Farrington, Lowville; A. A. Hartshorn, Hamilton; Prof. H. H. Wing, Ithaca; H. V. Noyes, Oneida; F. H. Stevens, Lacona; H. C. Wood, Morrisville; George A. Abbott, Cortland; C. B. Marshall, Morrisville; R. E. Chapin, Batavia; Fred A. Blewer, Owego; Grant B. Low, New Berlin; Carl J. Schmid, Montgomery; Harry Yates, Orchard Park; F. M. Jones, Clinton; W. D. Robens, Poland; S. T. Wood, Liverpool; A. W. Brown, West Winfield; F. H. Thomson, Holland Patent; E. M. Hastings, Pulaski.

In addition to the official delegates, a large number of the state association expect to attend the meeting including: N. S. Prescott, M. C. Bond, W. R. Smith, W. M. Rider, as well as other well known breeders from other parts of the State.

On the two days following the meeting, a National Holstein Sale will be held under the auspices of the Ohio Holstein Association. New York State is sending two dozen of its finest specimens of the breed by special car. The consignment includes the new State champion senior 2-year old heifer with a record of 1,035 pounds of butter and 25,554 pounds of milk. She is consigned by George M. Smith of Watertown. The consignment was selected by the New York State Holstein-Friesian Association.

ALONG THE SOUTHERN TIER OF NEW YORK

Ground has been broken for a new community market at Binghamton, on the plot of ground given the City for this purpose by the Endicott-Johnson Company. The intention is to have it ready for business by the first of August. Farmers and city folks all hope so.

Baled hay brings \$25 a ton in the Binghamton markets, and baled straw, \$16. Some are paying \$14 a ton for hay in the barn and the seller pitches it to the press.

The pine grove on the North Farm at East Maine is being cut down and the logs sent to the mill. At Union Centre there is another skidway of pine logs, larger than any seen in recent years. But the farmers in that neck of the woods have set out a good many seedling pines and other varieties of wood this spring. That is right. Keep the woods growing.

On May 22, much of the hill land was too wet and cold to work. Many farmers have not yet sowed their oats and very little corn or potatoes have been planted. Good warm weather is sorely needed.

If it is farm news, you will see it in the American Agriculturist.

You Can Buy a De Laval for \$50 and Up—On Such Easy Terms that It Will Pay for Itself

Don't get the idea that a De Laval Cream Separator is high priced because it is the best. Considered on the basis of service a De Laval is the cheapest separator made. A De Laval costs a little more to begin with but lasts three or four times longer, and does better work all the time.

You can get a De Laval for as low as \$50, and up, depending on the amount of milk you have to separate. No matter if you have one or a thousand cows, there is a De Laval just right for you. And you can buy a De Laval on such liberal terms that it will pay for itself while you are using it.

When you get a De Laval you not only get the best separator service for the longest time, at the least expense—on the easiest terms, if desired—but you can see what you are buying. You can

try it; your local De Laval dealer will instruct you in its use and provide service should it ever be necessary; and you can always get parts from the De Laval Company at any time during the 20 to 30 years, or more, your machine should last. These important considerations are sometimes overlooked.

See the new 1923 De Laval at your local dealer's store. It is the best cream separator ever built. It has many improvements, skims cleaner, requires less care, and will last longer than any cream separator on the market.

You may be losing enough butter-fat with your present separator or by hand skimming to pay for a new De Laval every year and not getting it. If you do not know the name of your nearest De Laval agent, write us direct for complete information.

The De Laval Separator Co.

NEW YORK CHICAGO SAN FRANCISCO
165 Broadway 29 E. Madison St. 61 Beale St.

Sooner or later you will use a
De Laval
Cream Separator and Milker

CRAINE TRIPLE WALL SILOS

Lasting Satisfaction

You can easily tell a Craine 3-Wall Silo from any other. It is the only manufactured wood silo that has neither hoops nor lugs to hold it together.

It gives its owner lasting satisfaction. It is the cheapest silo to own. It stays put without tinkering.

Craine Silos are constructed to keep warmth and juices in; to keep cold and weather out. A strong stave silo inside is covered with thick Silafelt, and the patented, Crainelox Spiral Covering outside binds the entire structure. This forms a handsome building with every square inch of surface protected in every direction.

Any old stave, iron-hooped silo can be rebuilt into a permanent Craine 3-Wall Silo at about half the cost of a new one.

Send for handsome illustrated catalog

When Writing Advertisers Be Sure to Mention American Agriculturist.

THIS IS YOUR MARKET PLACE

Classified Advertising Rates

Advertisements are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week.

Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

The American Agriculturist accepts only advertising which it believes to be thoroughly honest.

We positively guarantee to our readers fair and honest treatment in dealing with our advertisers.

We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised.

To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

Every week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

BRED TO LAY—Day-old chicks, S. C. White Leghorns: May, \$15 per 100; June, \$12 per 100. Barred Rocks, Reds, White Wyandottes: May, \$18 per 100; June, \$14 per 100. Eggs at \$5 per 100. STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of American Agriculturist published weekly at 416 W. 13th St., New York, N. Y., for April 1, 1923.

State of New York, County of New York, ss.

Before me, a notary public in and for the State and county aforesaid, personally appeared Henry Morgenthau, Jr., who, having been duly sworn according to law, deposes and says that he is the president of American Agriculturist, Inc., and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and address of the publisher, editor, managing editor and business managers are:

Publisher, Henry Morgenthau, Jr., 35 West 81st St., New York, N. Y.; Editor, E. R. Eastman, 1503 Miller St., Utica, N. Y.; Managing Editor, E. R. Eastman, 1503 Miller St., Utica, N. Y.; Business Manager, Henry Morgenthau, Jr., 35 West 81st St., New York, N. Y.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and address of stockholders owning or holding 1 per cent or more of the total amount of stock.) American Agriculturist, Inc., New York, N. Y.; Henry Morgenthau, Jr., 35 West 81st St., New York, N. Y.; Henry Morgenthau, 30 West 72d St., New York, N. Y.; Elinor F. Morgenthau, 35 West 81st St., New York, N. Y.; E. R. Eastman, 1503 Miller St., Utica, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is..... (This information is required from daily publications only.)

Henry Morgenthau, Jr.

President.

Sworn to and subscribed before me this 2nd day of April, 1923.

Elsie B. Ganz (Weiss).

(My commission expires March, 1925.)

The Brown Mouse—By Herbert Quick

HE dropped into his chair, while the secretary drew from his portfolio a contract duly drawn up save for the signatures of the officers of the district, and the name and signature of the teacher-elect. This he calmly filled out, and passed over to the president, pointing to the dotted line. Mr. Bronson would have signed his own death-warrant at that moment, not to mention a perfectly legal document, and signed with Peterson and Bonner looking on stonily. The secretary signed and shoved the contract over to Jim Irwin.

"Sign there," he said.

Jim looked it over, saw the other signatures, and felt an impulse to dodge the whole thing. He could not feel that the action of the board was serious. He thought of the platform he had laid down for himself, and was daunted. Then he thought of Jennie Woodruff's "Humph!"—and he signed!

"Move we adjourn," said Peterson.

"No 'bjection 'tis so ordered!" said Mr. Bronson.

The secretary and Jim went out, while the directors waited.

"What the Billy—" began Bonner, and finished lamely. "What for did you vote for the dub, Ez?"

"I voted for him," replied Bronson, "because he fought for my boy this afternoon. I wanted him to have *one* vote."

"An' I wanted him to have wan vote, too," said Bonner. "I thought mesilf the only dang fool on the board—an' he made a spache that airned wan vote—but f'r the love of hivin, that dub f'r a teacher! What come over you, Haakon—you voted f'r him, too!"

"Ay wanted him to have one wote, too," said Peterson.

And in this wise, Jim became the teacher in the Woodruff District—all on account of Jennie Woodruff's "Humph!"

CHAPTER III

WHAT IS A BROWN MOUSE

IMMEDIATELY upon the accidental election of Jim Irwin to the position of teacher of the Woodruff school, he developed habits somewhat like a ghost's or a bandit's. That is, he walked of nights and on rainy days.

On fine days, he worked in Colonel Woodruff's fields as of yore. Had he been appointed to a position attached to a salary of fifty thousand dollars a year, he might have spent six months on a preliminary vacation in learning something about his new duties. But Jim's salary was to be three hundred and sixty dollars for nine months' work in the Woodruff school, and he was to find himself—and his mother.

The Simms family, being from the mountings of Tennessee, were rather startled one night, when Jim Irwin, homely, stooped and errandless, silently appeared in their family circle about the front door. They had lived where it was the custom to give a whoop from the big road before one passed through the palin's and up to the house. Otherwise, how was one to know whether the visitor was friend or foe?

From force of habit, Old Man Simms started for his gun-rack at Jim's appearance, but the Lincolnian smile and the low slow speech, so much like his own in some respects, ended that part of the matter. Besides, Old Man Simms remembered that none of the Hobdays, whose hostilities somewhat stood in the way of the return of the Simmses to their native hills, could possibly be expected to appear thus in Iowa.

"Stranger," said Mr. Simms, after greetings had been exchanged, "you're right welcome, but in my kentry you'd find it dangersome to walk in this-away."

"How so?" queried Jim Irwin.

"You'd more'n likely git shot up some," replied Mr. Simms, "onless you whooped from the big road."

"I didn't know that," replied Jim. "I'm ignorant of the customs of other countries. Would you rather I'd whoop from the big road—nobody else will."

"I reckon," replied Mr. Simms, "that we-all will have to accommodate ourselves to the ways hyeh."

Evidently Jim was the Simms' first caller since they had settled on the little brushy tract whose hills and trees reminded them of their mountains. Low hills, to be sure, with only a footing of rocks where the creek had cut through, and not many trees, but down in the creek bed, with the oaks, elms and box-elders arching overhead, the Simmses could imagine themselves beside some run falling into the French Broad, or the Holston. The creek bed was a withdrawing room in which to retire from the eternal black soil and level cornfields of Iowa. What if the soil was so poor, in comparison with those black uplands, that the owner of the old wood-lot could find no renter? It was

better than the soil in the mountains, and suited the lonesome Simmses much more than a better farm would have done. They were not of the Iowa people anyhow, not understood, not their equals—they were pore, and expected to stay pore—while the Iowa people all seemed to be either well-to-do, or expecting to become so. It was much more agreeable to the Simmses to retire to the back wood-lot farm with the creek bed running through it.

Jim Irwin asked Old Man Simms about the fishing in the creek, and whether there was any duck shooting spring and fall.

"We git right smart of these little panfish," said Mr. Simms, "an' Calista done shot two butterball ducks about 'tater-plantin' time."

Calista blushed—but this stranger, so much like themselves, could not see the rosy suffusion. The allusion gave him a chance to look about him at the family. There was a boy of sixteen, a girl—the duck-shooting Calista—younger than Raymond—a girl of eleven, named Virginia, but called Jinnie—and a smaller lad who rejoiced in the name of McGeehee, but was mercifully called Buddy.

Calista squirmed for something to say. "Raymond runs a line o' traps when the fur's prime," she volunteered.

THEN came a long talk on traps and trapping, shooting, hunting and the joys of the mountings—during which Jim noted the ignorance and poverty of the Simmses. The clothing of the girls was not decent, according to local standards; for while Calista wore a skirt hurriedly slipped on, Jim was quite sure—and not without evidence to support his views—that she had been wearing when he arrived the same regimentals now displayed by Jinnie—a pair of ragged blue overalls. Evidently the Simmses were wearing what they had and not what they desired. The father was faded, patched, gray and earthy, and the boys looked better than the rest solely because we expect boys to be torn and patched. Mrs. Simms was invisible except as a gray blur beyond the rain-barrel, in the midst of which her pipe glowed with a regular ebb and flow of embers.

On the next rainy day Jim called again and secured the services of Raymond to help him select seed corn. He was going to teach the school next winter, and he wanted to have a seed-corn

frolie the first day, instead of waiting until the last—and you had to get seed corn while it was on the stalk, if you got the best. No Simms could refuse a favor to the fellow who was so much like themselves, and who was so greatly interested in trapping, hunting and the Tennessee mountains—so Raymond went with Jim, and with Newt Bronson and five more they selected Colonel Woodruff's seed corn for the next year, under the colonel's personal superintendence.

IN the evening they looked the grain over on the Woodruff lawn, and the colonel talked about corn and corn selection. They had supper at half past six, and Jennie waited on them—having assisted her mother in the cooking. It was quite a festival. Jim Irwin was the least conspicuous person in the gathering, but the colonel, who was a seasoned politician, observed that the farm-hand had become a fisher of men, and was angling for the souls of these boys, and their interest in the school. Jim was careful not to flush the covey, but every boy received from the next winter's teacher some confidential hint as to plans, and some suggestion that Jim was relying on the aid and comfort of that particular boy. Newt Bronson, especially, was leaned on as a strong staff and a very present help in time of trouble. As for Raymond Simms, it was clearly best to leave him alone. All this talk of corn selection and related things was new to him, and he drank it in thirstily.

"Jennie," said Colonel Woodruff, after the party had broken up, "I'm losing the best hand I ever had, and I've been sorry."

"I'm glad he's leaving you," said Jennie. "He ought to do something except work in the field for wages."

"I've had no idea he could make good as a teacher—and what is there in it if he does?"

"What has he lost if he doesn't?" rejoined Jennie. "And why can't he make good?"

"The school board's against him, for one thing," replied the colonel. "They'll fire him if they get a chance. They're the laughing-stock of the country for hiring him by mistake, and they're irritated."

"If he could *feel* like anything but an underling, he'd succeed," said Jennie.

"That's his heredity," stated the colonel, whose live-stock operations were based on heredity. "Jim's a scrub, I suppose; but he acts as if he might turn out to be a Brown Mouse."

"What do you mean pa," scoffed Jennie—"a Brown Mouse?"

"A fellow in Edinburgh," said the colonel, "crossed the Japanese waltzing mouse with the common white mouse. Jim's peddling father was a waltzing mouse, no good except to jump from one spot to another for no good reason. Jim's mother is an albino of a woman, with all the color washed out. Jim ought to be a mongrel, and I've always considered him one. But the Edinburgh fellow every once in a while got out of his variously-colored, waltzing and albino hybrids, a brown mouse. It wasn't a common house mouse, either, but a wild mouse unlike

any he had ever seen. It ran away, and bit and gnawed, and raised hob. It was what we breeders call a Mendelian segregation of genetic factors that had been in the waltzers and albinos all the time—their original wild ancestor of the woods and fields. If Jim turns out to be a Brown Mouse, he may be a bigger man than any of us. Anyhow, I'm for him."

"He'll have to be a big man to make anything out of the job of a country school-teacher," said Jennie.

"Any job's as big as the man who holds it down," said her father.

Next day, Jim received a letter from Jennie.

"Dear Jim," it ran. "Father says you are sure to have a hard time—the school board's against you, and all that. But he added, 'I'm for Jim, anyhow!' I thought you'd like to know this. Also he said, 'Any job's as big as the man who holds it down.' And I believe this also, and I'm for you too! You are doing wonders even before the school starts in getting the pupils interested in a lot of things, which, while they don't belong to school work, will make them friends of yours. I don't see how this will help you much, but it's a fine thing, and shows your interest in them. Don't be too original. The wheel runs easiest in the beaten track."

"Yours, Jennie."

Jennie's caution made no impression on Jim—but he put the letter away, and every evening took it out and read the italicized words, "*I'm for you, too!*" The colonel's dictum, "Any job's as big as the man who holds it down," was an Emersonian truism to Jim. It reduced all jobs to an equality, and it meant equality in intellectual and spiritual development. It didn't mean, for instance, that any job was as good as another in making it possible for a man to marry—and Jennie Woodruff's "Humph!" returned to kill and drag off her "I'm for you, too!"

CHAPTER IV

THE FIRST DAY AT SCHOOL

I SUPPOSE every reader will say that genius consists very largely in seeing Opportunity in the set of circumstances or thoughts or impressions that constitute Opportunity, and making the best of them.

Jim Irwin would have said so, anyhow. He was full of his Emerson's *Representative Men*, and his Carlyle's *French Revolution*, and the other old-fashioned, excellent good literature which did not cost over twenty-five cents a volume; and he had pored long and with many thrills over the pages of

WHAT HAS HAPPENED?

WHEN Jennie Woodruff said "Humph!" Jim Irwin decided that he would be something besides her father's field hand after all. He had often expressed his opinion of what a rural school should be, and through a fluke is elected to the vacant position of school-teacher and must make good his theories.

Among Jim's loyal adherents is 17-year old Newton Bronson, whose truancy and pool-playing are making him a local problem. Jim fights for Newton in a roadside argument and as a result Mr. Bronson nominates him for the position.

They looked the grain over on the Colonel's lawn

Matthews' *Getting on in the World*—which is the best book of purely conventional helpfulness in the language. And his view of efficiency was that it is the capacity to see opportunity where others overlook it, and make the most of it.

All through his life he had had his own plans for becoming great. He was to be a general, hurling back the foes of his country; he was to be the nation's master in literature; a successful drawing on his slate had filled him with ambition of becoming a Rubens—and the story of Benjamin West in his school (Continued on page 476)

A Visit With Mrs. Edward Young

Women Learn Civics by Practical Work, She Says, Not by Theory Alone

By GABRIELLE ELLIOT

A FEMINIST in the best sense of that much abused but expressive word is Mrs. Edward Young, mother of six children, head of a busy household, yet actively interested in the affairs of her community, not only as they react upon her own family, but as they affect other women and their children. A born home-maker, Mrs. Young carries her home-making instinct outside her own four walls, and as a result many other families benefit by her alert, energetic, good-humored insistence on applying the virtues of the good housekeeper to public as well as private life.

Some years ago, when the six little Youngs were even littler (in fact, several of them are now considerably taller than their mother, and the oldest daughter is working as a trained dietitian) Mrs. Young was pitchforked, more or less, into public life, and has remained there ever since. Just now she is chiefly known to New York women as a very busy and very effective speaker for the work of the Committee of 21, on which she has served for the last three years. But the story of her public activity goes back much farther than that.

I found Mrs. Young, one of those bleak gray days which passed for spring on the calendar, "resting" at home for a day, between a flying trip to Albany in the interest of the school bill and an equally urgent call to a Grange meeting in the opposite direction. "Resting" means about as active a twelve-hour day as even a farmer's wife can put in, but between hurried visits to kitchen, telephone and upstairs regions, she found time to sit

down and chat in the front room of the comfortable old house in Milton, Ulster county, where Mr. Young's family has been established for generations.

"I frankly admit that at times I neglect my family—and I don't think it hurts them a bit," stated Mrs. Young gravely, but with a twinkle in her eye. "They've learned to be ever so self-reliant, and then, too, when I do come home, they appreciate me all the more!"

"But, I must also admit that I'm just a wee bit tired of doing so much outside work, and that when this school bill finally goes through—as it eventually will—I mean to stay home and enjoy my family a little," she added seriously. "The school situation, though, is one that needs the active work of every one of us, and having been the oldest of twelve, to say nothing of raising six children myself, I have had plenty of opportunity to see our school system at close range and to understand its defects and its virtues. It has both."

Mrs. Young, though long an active worker for suffrage, assumed her first public position in 1912. As might have been expected, because of her special interest in the subject, it was as a school director.

Her Experience as a Law-Breaker

"It was rather funny the way it happened," said Mrs. Young, with a reminiscent chuckle. She evidently enjoys a joke on herself as much as any other sort. "As a matter of fact, not being a voting citizen, I hadn't any right to run or be elected. But I didn't know that and neither, apparently, did the men who put me in."

"You'll remember that the law providing for directors of schools to meet every five years, was passed in 1912. I was nominated by the Republicans. The Democrats refused to nominate another candidate. So—and this is where the trick came in—I was unani-

mously elected. Then when the legality was questioned, I couldn't be removed because I really had been appointed by unanimous public opinion. On legal advice, I attended the director's conference, a bit in hope, I confess, that my right to do so would be challenged, so that I might have a chance to argue the point. I was the only woman there, but was heartily welcomed and didn't have to defend myself. I've been a director ever since, too."

At this point two junior Youngs joined in the interview; one a twelve year old boy, and the other the sturdy eight year old girl, just home from school, who appears in the picture as the baby of the family. They helped to study seriously over the collection of the snapshots and to decide which was the best to appear in the American

Agriculturist.

"I'm a very strong supporter of the Home Bureau," said Mrs. Young, when this important question had been decided. "To my mind, it serves as a central point on which all women, no matter what their individual interests, can focus. I think there are too many organizations now-a-days, and a small community cannot begin to support all the good ones. Under the Home Bureau plan, small groups can come together according to the subjects which interest them—civics, flower raising, literature, dressmaking—and yet the strength of the whole is behind each branch. Thus the women all get what they want, yet they pull together and not apart."

"The part which women should take in politics is now very much in the public eye," went on Mrs. Young, after a little excursion to attend to some household emergency. "I believe that many women, in saying they are interested in civics, mean politics. "But women really cannot take their part in political life as yet. The system, or technique, you might call it, has been too long developing to be grasped over night. Yet, I certainly agree the women should learn to take their share of political responsibility."

Learn Citizenship by Doing

"I believe therefore that each woman should have some one definite interest, such as the school situation. By studying it in all its aspects and by working to improve it, a woman makes herself a better citizen. It is the old idea of learning by doing. She not only improves the schools, but gets a thorough training in civics and politics at the same time. I'm a great believer in the ability and high purpose of my own sex, but I would urge all women to begin in a simple way, near home to study their own community, and thus gradually to work into the more complicated scheme of things in county, state and nation."

"Well, there you have about all I can say. As a farm woman, I don't feel that I've had any sort of 'career' or any great success that would interest other women. My aim has been to be, if possible, a successful home-maker, but I can assure you I'm decidedly conscious of my limitations!"

The interview was over, so far as Mrs. Young was concerned, but there seemed still a good deal to be said about her garden, about her church, where she is an active worker, and its Sunday-school, about the school where her children go and where hot lunches are now under discussion, and of course, about hospitable Mr. Young, sick at home with the grippe, but still willing to have a strange visitor welcomed for

the day, and the four boys and two girls who make up the next generation. In the midst of it all, a mud-splashed Ford honked at the gate and soon rattled off down the precipitous hills with which that part of the Hudson River shore is blessed, carrying the visitor back to the little Milton station a mile or so away.

The Brown Mouse

(Continued from page 475)

reader fanned this spark to a flame; science, too, had at times been his chosen field; and when he had built a mousetrap which actually caught mice, he saw himself a millionaire inventor. And all the time, he was barefooted, ill-clad and dreamed his dreams to the accompaniment of the growl of the plow cutting the roots under the brown furrow-slice.

As for this new employment, he saw no great opportunity in it. Of any spark of genius he was to show in it, of anything he was to suffer in it, of those pains and penalties wherewith the world pays its geniuses, Jim Irwin anticipated nothing. He went into the small, mean, ill-paid task as a part of the day's work, with no knowledge of the stirring of the nation for a different sort of rural school, and no suspicion that there lay in it any highway to success in life.

But, true to his belief in honest thorough work, he examined his field of operations. His manner of doing this seemed to prove to Colonel Woodruff, who watched it with keen interest as something new in the world, that Jim Irwin was possibly a Brown Mouse. But the colonel knew only a part of Jim's performances. He saw Jim clothed in slickers, walking through rainstorms to the houses in the Woodruff District, as greedy for every moment of rain as a haymaker for shine; and he knew that Jim made a great many evening calls.

But he did not know that Jim was making what our sociologists call a survey. For that matter, neither did Jim; for books on sociology cost more than twenty-five cents a volume, and Jim had never seen one. However, it

GUESS WHO THIS IS?

SHE is a good cook, a good dress-maker, a good housekeeper, but more than that. She knows how to raise flowers, vegetables, chickens and bees; how to milk, churn and can; but she knows more than that. She is a shrewd buyer, a careful executive, a good all-round business woman; but she is even more than that. She is the wife of the most important man in the world and the mother of the men who have made America. She is the American farmer's wife.

was a survey. To be sure, he had long known everybody in the district, save the Simmses—and he was now a friend of all that exotic race; but there is knowing and knowing. He now had note-books full of facts about people and their farms. He knew how many acres each family possessed, and what sort of farming each husband was doing. He knew whether the family atmosphere was happy and contented, or the reverse. He knew which boys and girls were wayward and insubordinate. He made a record of the advancement in their studies of all the children, and what they liked to read. He knew their favorite amusements. He talked with their mothers and sisters—not about the school, to any extent, but on the weather, the horses, the automobiles, the silo-filling machinery and the profits of farming.

Really, though Jennie Woodruff did not see how such doings related to school work, Jim Irwin's school was running full blast in the homes of the district and the minds of many pupils, weeks and weeks before he called them to order on the first day of school.

In the Realm of the Home Maker

The Newest Patterns, Recipes and Time Saving Suggestions are Here

OVERBLOUSES are the height of style this year and the new materials are so pretty that every woman wants several different blouses just for variety. No. 1710 is an easy-to-make, economical - of - material style, and one which a young girl or older woman could wear equally well.

No. 1710 comes in sizes 16 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 1 1/4 yards of 36-inch material. Price, 12c. (stamps preferred).

Another popular blouse style is 9922, a front-opening model which slips on over the head. The side body and short sleeves are in one, with a flared cuff forming a three-quarter sleeve. Two materials can be combined or the same one may be used for the entire blouse.

No. 9922 comes in sizes 36, 38, 40 and 42 inches bust measure. Size 36 requires 1 1/4 yards 36-inch material. Price, 12c.

This comfortable negligee shirt, No. 1759, suitable for man or boy, comes in sizes 12 1/2, 13, 13 1/2, 14, 14 1/2, 15, 15 1/2, 16, 16 1/2, 17, 17 1/2, 18, 18 1/2 and 19 inches neck measure. Size 12 1/2 requires 1 1/4 yards of 36-inch material. Price, 12c.

To Order: Give all pattern numbers and sizes desired, write your name and address clearly and send with complete remittance to Pattern Department of American Agriculturist, 461 Fourth Avenue, New York City.

Our Summer fashion magazine is another "best seller". Your copy will be sent you if you add 10 cents to your pattern order.

SPRING ASPARAGUS IS HERE

Asparagus has been too much regarded as a delicacy and not sufficiently appreciated as a vegetable. It is an unusually nourishing food and tempts if well prepared.

Although asparagus is generally used as a salad, or boiled and served as a vegetable, it is capable of many combinations with other vegetables and with meats. Some good recipes are as follows:

Asparagus Cream Omelet

Stir 1 heaping tablespoonful of butter, and 1 tablespoonful of flour together. Set the saucepan over the fire and when well blended add 1 cupful of milk, stir until smooth, add a teaspoonful of chopped parsley, remove from the fire, and cool. Beat 3 eggs, separately, the whites to a stiff froth, add the yolk to the cold sauce, with a teaspoonful of salt and a dash of red pepper; add also 1 cupful of cooked asparagus tips and the stiffly beaten whites of the eggs. Put a tablespoonful of butter in a hot frying pan, when it is brown, pour in the mixture, break it in places with a fork to allow the uncooked portion to run down. When it is set, place in a hot oven for five minutes, double over and serve.

Asparagus Sandwiches

Chop fine one hard boiled egg, four strips of browned left over bacon, and 6 or more asparagus tips. Mix well

with any favorite boiled dressing and spread between thin slices of white bread.

Asparagus on Toast

Boil the asparagus as you desire. Toast slices of bread. Dip quickly in the water in which the asparagus was cooked, and butter. Lay several stalks of asparagus on each slice, arrange on platter, season with salt and pepper and melted butter.

Cream of Asparagus Soup

Break the tender part of one large or two small bunches of asparagus into pieces about one inch long, cook in just enough salted water to keep from burning. Cook in a separate kettle six or eight potatoes cut in quarters. When done, pour off water, put potatoes and asparagus together with water it was cooked in, into your serving dish, add a generous piece of butter, a little salt and pepper and 1 cupful of heavy cream. Milk may be used instead of cream, if thickened to the consistency of cream.

Asparagus with Cauliflower

Cut the stalks in half and the lower part should be cooked for three-quarters of an hour. Then add the tops and cook for 10 or 15 minutes. By this method both parts become just right. The stalk is tender throughout, and the tops do not fall all to pieces. In the meanwhile, boil a head of cauliflower in slightly salted water until tender. Then arrange the head of asparagus tumbling down the sides of it. A few cucumber pickles may be added for variety.—H. A. LYNAN.

FLAWLESS FLOORS

The kitchen floor probably gets the hardest wear of any floor in the house. Specialists at the school of home economics offer suggestions on the floors and floor coverings that wear well and at the same time are attractive.

Linoleum is made of cork or wood pulp pressed in linseed oil. There are two kinds—the printed, the pattern being stamped on and wearing off with usage; and the inlaid, with the pattern extending through the material to the fabric. Though the first expense is greater, it is economy to buy the inlaid, since with proper care it will last many years. It is easy to keep clean and comfortable to work on. The floor underneath should be smooth and well laid or the linoleum will wear unevenly and crack.

Hints on Laying Linoleum

The linoleum may be tacked or cemented to the floor. Tacking is simpler, but cementing makes the seams and edges water-tight. The quarter-round molding along the floor of the baseboard should be removed and the linoleum cut in strips running lengthwise of the boards. If it is to be tacked, the strips should be fitted snugly together along the seams, but should not be fastened for three or four weeks, for linoleum usually expands when laid on a floor and if tacked down at once will buckle. Linoleum may be cemented at the seams and edges directly to a wood floor or permanently cemented down firmly over a layer of deadening felt paper that has itself been pasted to the floor. Some manufacturers and dealers furnish printed directions for this method. The cement used should be waterproof and contain no silicate of soda (water glass) because this is injurious to the linoleum when moisture comes in contact with it.

Something about Floors

Plain wood floors well-laid, and treated frequently with pure boiled linseed oil, are comfortable, do not show grease spots, and are easy to keep clean.

Painted floors are comfortable to work on, but need a coat of paint two or three times a year to keep in good condition. According to the United States Bureau of Standards, the first coat should consist of white lead in linseed oil, with a little drier; the second coat, of equal parts of white lead and

zinc white in oil, coloring matter as desired, and drier and turpentine to give a flat finish; and the third coat of the same materials as the second, except that instead of turpentine good floor varnish should be added in the proportion of 1 to 4 pints to a gallon of paint. Each coat of paint should be thoroughly brushed into the wood, lengthwise of the grain, and allowed ample time to dry. If desired, a coating of equal parts of turpentine and linseed oil may be rubbed on with a soft cloth after the last coat of paint has thoroughly dried, and the floor then polished with a woolen cloth.

Tile floors are sanitary and durable, but are considered hard to stand on. Carpet and matting should never be used, since they are very unsanitary. However, if nothing else is available, a few rag rugs or strips of carpet that may easily be taken up and washed can be used around the stove and sink to save tired feet. Rubber mats are most desirable for use over hard surfaced floors.

WOMEN UNITE TO UPHOLD LAW

Ten million women, according to newspaper accounts, are represented by the membership of a committee recently formed in New York City. It is called the National Committee for the Enforcement of Law, and has as its purpose the pledging of American women to combat the present day wave of lawlessness and to uphold existing statutes, among them the Volstead act.

The temporary general chairman was Mrs. Henry Peabody of Boston, who outlined the purpose of the committee and spoke particularly of the anti-prohibition agitation and the narcotic problem. "The women of the nation are being misrepresented when it is stated that they are opposed or are indifferent to the enforcement of the law," said Mrs. Peabody.

Mrs. Edward Franklin White, delegate of the General Federation of Women's Clubs, with 4,000,000 members, was elected permanent chairman. Delegates were sent by the Daughters of the American Revolution, the Y. W. C. A., the Federation of Women's Boards of Foreign Missions, the National Congress of Mothers and Parent Teachers, the Kings Daughters and the Catholic Women's Total Abstinence League.

The first steps taken by the committee after organization was the adoption of a resolution urging Governor Smith to veto the Cuvillier measure repealing the Mullan-Gage act. A letter accompanying the resolution listed the many women's associations whose members were behind the committee.

Permanent organization will be completed in June and national headquarters opened.

Dear Household Editor:

I have often wished to write you and tell you how much I appreciate your page. I can not express fully what it means to me. I do like the common sense talks such as "Are we health heathens?" and "Have your Children Read these Books?" so much depends on the right kind of books for the children.

A friend of mine paid a big price for a pattern to make her little girl a dress and she was so peeved because the very next issue of the American Agriculturist had the very same pattern and so much cheaper.

"Riders of the Purple Sage" was a fine story. "The Valley of the Giants" can't be beat. I like the stories you have published, only there is not enough published in the paper each week to suit me.

The children and I planted two black-walnuts last fall before they died, but we would not have known that if the frost did not crack the shell we could with safety do so in the spring until some one asked the question in American Agriculturist and it was answered.

I have found so many articles in the American Agriculturist on dealing fairly with the children. It is what all of us that have families need, for it gives us new ideas. It isn't that we wish to be otherwise than fair to the youngsters, but just plain thoughtlessness. Our little boy five years old had a pet hen. She stole her nest, he found it and saved the eggs. He said he wished to buy things he would need for school. Last year at the age of six, he raised some chickens. Mother helped him and he helped mother with her chickens, change about. To say that he gets pleasure out of it is putting it light. He has something to call his own and he can see for what purpose he is working. We like American Agriculturist best of any farm paper.

Sincerely yours,

MRS. ELEVA B. BUESINK, Clymer, N. Y.

Reviewing the Latest Eastern Markets and Prices

PREPAY EXPRESS TO AVOID OVERCHARGE

HERSCHEL H. JONES

SHIPPERs of eggs to the New York market never cease to have trouble with express overcharges. Most shipments are sent express collect. The commission merchant or buyer pays the express and deducts it from the return. In the hurry of making deliveries, the express agents seem to find it difficult to make out accurate charges. The wholesale receiver has neither time nor facilities to check up the accuracy of the charges. When the shipper gets his account of sales, which he should always examine carefully, he may find an overcharge of several cents, or much more.

One man, I know, shipped early broilers to New York from a distance and on investigation discovered he was overcharged nearly \$10 on one lot of coops.

While overcharging is mere carelessness, the mistake most frequently seems to be made on the safe side for the express company. The surest remedy is to learn the correct tariff, weigh the case yourself and prepay the charges. Be sure the local agent puts the prepaid label on the case. When you notify the receiver that the shipment has been sent, state that it is "express prepaid." Your receipt from the express company will enable you to substantiate any claim for loss from careless handling in transit. The shippers who are doing this, find it completely eliminates difficulties with overcharges.

EGGS MOVING SLOWLY

Receipts of nearby white eggs continue considerably in excess of the demand for current consumption, and the market for them has been quite unsatisfactory. Receivers are compelled to move out job lots of 100 cases, or more, at even prices to prevent accumulations, in which there may be some good and some poor eggs. The quality of the general receipts is very irregular. A small proportion of the best nearby whites sold at 32 to 33c, occasionally as high as 35c, but the bulk of them sold at 28 to 31c. Even fancy New Jersey hennerly whites moved slowly with a top price of 40c.

The supply of fancy, large size, hennerly brown eggs, with dark brown shell and light yolks, was light, and the market for them advanced. N. J. hennerly browns brought 36 @ 37c, and other nearby browns, extras, 33 @ 35c.

Pacific Coast whites were in heavier supply and dull and weak. Surplus had to be stored. Fancy Petaluma packings offered at 37c doz.

Total receipts of eggs at New York since January 1 were on May 23 only 3,598,574 cases, compared with 3,647,740 to same date last year. The amount on hand in storage on that date was 1,137,347 cases, compared with 1,241,311 cases same date in 1922. It should be remembered that last year there was such a surplus in storage that a great deal of money was lost by the storers.

HOLIDAY MARKET FOR BROILERS

After Memorial Day, the next best market time for live broilers is preceding July 4. Shippers should plan to get their broilers to market by June 29 this year for the July 4 trade. If you have no coops for shipping don't wait till the last ten days to write for them. It often takes two weeks to get them.

There is strong demand for really fancy live broilers, especially those weighing over 1½ lbs. Wholesale prices May 24 follow: Broilers, colored, large, 55c; colored, small, 50c; broilers, White Leghorn, fancy, large, 45 @ 50c; broilers, White Leghorn, small to medium, 25 @ 40c.

CHEESE MARKET FIRM

With a good demand for cheese, the market is more in the seller's favor, which trend is partly due to the cold weather. Dealers, therefore, are in a better position and are inclined to hold. Because of the light stocks in reserve, buyers are forced to take hold at prevailing prices.

In some circles it is felt that there is an increased consumption of cheese,

due to the general improvement in business conditions.

Prices ranged from 28 to 29½c on average run and fancys. State whole milk flats, average run, were quoted 28 @ 28½c.

BUTTER MARKET EASIER

This season of the year brings butter into the market with a decided grass flavor and with inferior quality, together with heavier receipts, the tone is easy. Buyers are not anxious to take hold except for immediate needs.

The receipts from Denmark will probably total during May over 800,000 lbs.

Creamery extras (92 score) sold from 41 to 41½c lb.; June extras, 39½c.

WOOL STILL FIRM

The Boston and New York markets are still firm for better grades of wool, with a little weakening on certain cross-breeds. There is less Western trading.

Yorkers, \$8.35 @ 8.50 cwt., a few at \$8.60; medium to lightweight pigs, \$8.30 @ 8.50; heavies, \$8 @ 8.40, and roughs, \$6 @ 6.40.

DRESSED CALVES INACTIVE

There was a limited supply of country-dressed calves, but with a quiet and less active market prices were barely maintained. For the best veals there was better demand and the tone firmer. Wholesale prices, May 23, per 100 lbs., country-dressed veal calves, prime, \$15 @ 17; fair to good, \$12 @ 14; small and common, \$11 @ 13.

Choice dressed lambs sold well, but poor quality received practically no attention; \$10 was top.

NEW POTATOES LOWER

South Carolina potatoes are coming into New York City more freely from 20 to 30 cars a day. Considering the lateness of the season, they will soon occupy most of the attention. Floridas sold on the docks from \$6.50 to \$7.50

to larger local demand where railroad construction work is going on. There is no demand for clover mixed hay except fancy light clover mixed. Following prices per ton, based on U. S. Grades for May 24:

Timothy No. 2 \$22 @ 24; No. 3 \$19 @ 20; No. 4 \$17 @ 18; sample, \$11 @ 16; fancy light clover mixed, No. 1 \$24; No. 2 \$22 @ 23; No. 3 \$19 @ 20; mixed grade, No. 1 \$22 @ 23; No. 2 \$20 @ 21.

MAPLE SYRUP LOWER

Larger offerings of new crop maple syrup in the wholesale commission houses made prices lower last week. Pure maple syrup in gallon tins of irregular quality sold at \$1.75 to \$1.90 per gallon. Some farmers accepted as low as \$1.50 per gallon for small lots of fairly good syrup. Fancy No. 1 New York State syrup cooperatively packed sold at \$2.35 per gallon wholesale. Dark maple sugar, bulk lots, at 20 to 25c per lb. depending on quality, and pound cakes of medium or light sugar are quoted at the same price.

HONEY MARKET DULL

There is practically no market in New York at present for comb honey. Extracted in 60 lb. cans has some outlet among jobbers supplying bakers, confectioners and restaurants. Receipts of foreign honey light but demand is too slow to make an active market. Dealers who specialize in honey are well stocked. The following quoted prices are more or less nominal: Comb, clover, case \$3.50 @ \$4; Extracted, clover 9½ @ 10½c lb.; Buckwheat 9 @ 10c lb.; mixed or irregular flavors 7½ @ 8½c lb.

I consider the American Agriculturist one of the best all-round farm papers that I take, and I take four of them. —C. A. McCulloch, Watson, N. Y.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on May 24:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.
New Jersey hennerly whites uncandled, extras...	37@40
Other hennerly whites, extras.....	36@37
Extra firsts.....	32@33	29@30	29
Firsts.....	29@31	27
Gathered, whites, first to extra firsts.....	29@33
Lower grades.....	27½@28
Hennery browns, extras.....	33@35
Gathered browns and mixed colors, extras.....	29@31	28@29
Pullets No. 1.....	28@29
Butter (cents per pound)			
Creamery (salted) high score.....	41	44@45
Extra (92 score).....	40½	42@43	42
State dairy (salted), finest.....	40	40@41
Good to prime.....	39@39½	32@39

Timothy No. 2.....	\$22@24	\$20@21	\$21@22
Timothy No. 3.....	19@20	19@20
Timothy Sample.....	11@16
Fancy light clover mixed.....	24	21@22
Alfalfa, second cutting.....	27@29
Oat straw No. 1.....	10	15.50@16
Live Poultry, Express Lots (cents per lb.)			
Fowls, colored fancy, heavy.....	30	26@28	30@31
Fowls, leghorns and poor.....	24@25
Chickens, leghorns.....	26@27
Roosters.....	16	17@18	16@17
Live Stock (cents per pound)			
Calves, good to medium.....	9@11
Bulls, common to good.....	4@4½
Lambs, common to good.....	10@14
Sheep, common to good ewes.....	3½@5½
Hogs, Yorkers.....	8½@8¾

Large buyers think growers are asking too high prices and are refusing to buy.

Last week's wholesale quotations follow:

Domestic fleece, unwashed, Ohio and Pennsylvania, per lb. Fine Delaine 57 @ 60c; XX 52 @ 54c; Half blood 55 @ 56c; ¾ blood 52 @ 53c; ¼ blood 50 @ 51c.

Territory, clean basis, fine, fine medium, staple \$1.45 @ 1.50; fine, fine medium, clothing \$1.35 @ 1.40; Half blood staple \$1.32 @ 1.35; ¾ blood \$1.05 @ 1.10; ¼ blood 96c @ \$1.

Secretary of Agriculture Wallace has approved of the official standards for grades of wool to become effective July 1, 1923. The standards provide for seven grades: fine, ½ blood, ¾ blood, ¼ blood, low ¼ blood common and braid. These standards are established as the result of investigations carried on over several years by the Department of Agriculture.

STEADY PRICES FOR LAMBS

Live sheep and lambs were steady last week. Demand was less active, but supplies were light. Both Southern and State "springers," as the outdoor real spring lambs are called, sold at \$17 to \$17.75 per cwt. Common stock from other sections sold May 24 at around \$16 @ \$16.50; prime State clipped, \$14.50 @ 15.75; common to good State, clipped, \$10 @ 14. Sheep sold as follows: Choice ewes, \$6 @ 7.50; choice, clipped, \$8; common to good, \$3 @ 5; culls, \$3 @ 4.

With moderate receipts and active demand, live calves sold fairly readily in spite of restricted business early last week on account of Jewish holidays. Prime stock brought \$13 to \$13.25 cwt.

Hogs, arriving chiefly on direct shipment to packers, were quoted May 24:

bbl. South Carolina cobbles sold from \$6 to \$7, a few higher.

Old potatoes are still coming in, but only about 25 per cent of all carlots are from Northern sections. The demand is light and the market dull. States sold from \$2 to \$2.50 per 150-lb. sack.

BUFFALO FEED PRICES EASY

Due to liberal offerings, spring bran receded 50c and winter bran \$1. The demand is quiet and market easy. Quotations on carlots, Buffalo rate basis in 100-lb. sacks per ton on May 23, were:

Gluten feed, \$41.05; cottonseed meal, \$45.30; oil meal, \$40.50; standard spring bran, \$32; hard winter bran, \$32; standard spring middlings, \$34.50; choice flour middlings, \$37; white hominy, \$36.55; No. 2 yellow corn, per bushel, 92c; No. 2 white oats per bushel, 50½; No. 3 white oats, per bushel, 49½c.

NEW YORK CASH GRAINS

Cash grain quotations May 23 at New York were:

Wheat, No. 2 red, \$1.50½; No. 2 hard winter, \$1.34½; No. 2 mixed durum, \$1.29; corn, No. 2 yellow, \$1.00½; No. 2 mixed, \$1; No. 2 white, \$1.00½; oats, No. 2 white, 56c; No. 3 white, 54½ @ 55c; rye, 89c.

Chicago: No. 2 hard winter, wheat, \$1.30; corn, No. 2 white, 82 @ 82½; No. 2 yellow, 82½ @ 82¾c; oats, No. 2 white, 45½ @ 45¾c; No. 3 white, 44¼ @ 45¼; barley, 70 @ 72c.

HAY MARKET SLIGHTLY BETTER

Although the New York hay market continued weak, there was a slightly better feeling toward the end of last week, resulting from the gradual cleaning up of accumulations of undergrades of hay. Receipts were a little lower than the week previous but trade was very dull. Surplus of poor quality hay hurts the whole market.

The Hudson River boats have had difficulty in getting loads, due it is said,

Give a thought to Advertising

AS this column is devoted to advertising, we are giving from time to time comment on some of the advertising literature that comes to our desk. We cannot, of course, take all of the good ones, but some of the outstanding features we think are worth mentioning here.

"IF BUGS COULD READ" is the title of a small booklet that attracted our attention considerably the other day. This little booklet, put out by the Bowker Insecticide Company in advertising their new Pyrox Spray Guide, is very neat in appearance and has, we think, a very catchy title—"If Bugs Could Read They Would Keep Away From Farms Where Pyrox Is Used." Poor bugs, they cannot read, but the farmer can who receives literature and that just makes the difference which we humans have over everything else.

Don't we often neglect the advantage of this asset which is ours—namely reading? To be sure no one can read all that is printed, but one class of reading that usually pays a very good dividend is the reading of good advertisements. We hope to see more such booklets of the kind just mentioned and we will be glad to comment on them here.

Who would buy shoes from a shoe salesman who sported a pair of dirty, run down foot coverings? Not many of us, we dare say. And yet, not so long ago we met a shoe salesman on a western train and he had on one of the worst looking pairs of shoes we ever saw. We asked him if they were the wonderful make that he was selling, which he had been praising so highly. He answered that they were. Right then and there we decided we would never buy a pair of that make of shoes.

This same principal applies to every industry. If you are selling apples, your orchard should be a model of cleanliness and order. For in that way you make a good impression and appearance plays a big part in advertising.

Again, if you are selling chickens, eggs, cattle, horses, or any certain product, the better condition you keep them and their surroundings in, the better impression they will make and the more sales will come your way.

This is rather a new angle in advertising—and a mighty important one—one that it pays to observe. So we repeat once more, that it pays to advertise, and it pays to advertise well, in the right way.

If any of you have seen a particularly good advertisement or booklet from a commercial concern, won't you call it to our attention? We would like to know your reaction on why you think it's good. Possibly you might have some reaction on some advertising in this issue. If so, let us hear from you.

Advertising Manager

Standardizing Products In New Jersey—Pennsylvania Farm News

THE marketing methods of important New Jersey cooperative associations and those of several big individual growers are changing so as to emphasize branded fruits, vegetables and eggs, carefully graded and packed as quality products, to be put upon the markets. Recent comparative figures in the operation of selling organizations in the State show that graded farm products were usually in strong demand even when the general run of those products were in over-supply. Among the big cooperative farm organizations in the State following this merchandising policy are the Jersey Fruit Growers' Cooperation Association with several local branches in the peach and apple belt; the Atlantic Coast Poultry Producers' Association with 250,000 hens signed up in New Jersey and adjacent States; the Garden State Potato Association, the Ocean County Sweet Potato Growers' Association, the Swedesboro Tomato Growers' Association, and the Sussex County Fruit Growers' Association.

Farmers' roadside markets promise to be very much in vogue this season according to information recently obtained by the New Jersey State Bureau of Markets. A. L. Clark, Chief of that Bureau, recently urged farmers intending to set up new markets to cooperate with the State Highway authorities by catering to the safety of patrons. The market stalls should be constructed a sufficient distance from the highway so that drivers might park their cars outside of the zone of travel. New Jersey has become justly famous for the products sold at its roadside markets. To maintain this enviable reputation the Department further urges farmers to sell only fresh products from their farms. Where imported southern fruit and vegetables are offered as accommodation they should be plainly marked as to their source and never sold to the purchaser under the impression that they are fresh New Jersey products.

Following a recent survey of conditions in New Jersey, Dr. T. J. Headlee, State Entomologist, reports indications of a severe outbreak of tent caterpillar. During the third week in May the caterpillar nests in the forks of various trees had reached a size fully as large as the human hand. Although most apparent on wild cherry trees, considerable infestation is noticed on apple, peach, pear, and orchard cherry trees. Dr. Headlee urges farmers to use arsenate of lead, either as a powder or as a suspension in water and thickly coated upon the foliage. The application should be made at once and repeated in case damage is renewed after the first coating has been washed off by rain. The beetle promises to be destructive until mid or late June, he states. Because of the danger of burning, the arsenate of lead must not be used upon peach foliage but should be applied with dry-mixed sulphur-lime or with powdered lime-sulphur.—W. H. B.

COOPERATIVE BRINGS LIVE STOCK BUYERS TO PENNSYLVANIA FARMS

A new kind of cooperative association came into existence this last year in Pennsylvania with the formation of the Steer Feeders' Cooperative Association in Adams County, Pa., which is winding up its first season with excellent results. Farmers of the county purchased 500 feeder cattle at Chicago last fall. These cattle were fed over winter on a ration consisting mostly of silage and cotton seed meal with limited amounts of corn and some hay. The cooperative ownership, enabling a feeding project on such a large scale, attracted buyers to the farm to bid on the cattle. The general practice of selling requires the farmers to ship their animals to the markets for sale. Plans are already under way for similar cooperative purchases this coming year with a larger number of members and an increased number of cattle to be fed. Discussion in other cattle feed-

ing counties indicates that the idea may spread within the year.

With the lack of facilities and space for the Annual State Farm Products show in Harrisburg of this last January in mind, the State Show Committee is already making efforts to increase the housing facilities for exhibits and meetings by another season. A recent investigation of conditions in Harrisburg shows that additional floor space will be very difficult to secure. Another problem which the committee must settle within the coming weeks is the matter of financing the show. It has been suggested that a nominal admission fee be asked for the commercial exhibits and organized groups of farmers in the State are giving some support to this plan. Announcement has just been made that a farm machinery exhibit, educational in nature, will be one of the principal innovations at next winter's exhibition.

Recent figures on the cost of hog production in Pennsylvania indicate that the "hogging off" of corn is proving to be a paying practice in the swine-raising areas of the State. Agricultural leaders have been talking this practice for several years, and apparently it has met with considerable favor in a number of the counties. The Pennsylvania plan is to sow a field of early corn so that the hogs can feed upon it while waiting for the main crop to ripen. Marketing statistics in the State show that the swine growers profit greatly by forcing their hogs upon the market early.—W. H. BULLOCK.

EASTERN PENNSYLVANIA NOTES

OLIVER D. SCHOCK

Reports from apple growers situated in Southern Pennsylvania indicate a large crop of apples for 1923. The York Imperial at present promises to surpass any other variety. This variety is extremely popular through this section of the country. The Stamen Wine-sap ranks second, a normal yield being predicted. Cold weather and late frosts injured the early blossoming varieties of fruit trees.

Farm boys and girls are rapidly organizing into potato and corn clubs. In some of the sections very attractive prizes are being offered to the boy or girl who produces the best produce. In one county a purse of \$100 was raised to be awarded in premiums.

A Review of New York's 146th Legislature

(Continued from page 469)

May 3, reconsidered and passed on May 4. The Governor has not yet signed the bill, but has called a hearing which will have been held when this paper reaches American Agriculturist readers.

Another bill of educational interest was that introduced by Robinson in the Assembly, and by Lowman in the Senate, adding a new section to the educational law designating the School of Home Economics at Cornell University as the New York State College of Home Economics and providing for its administration. The bill passed the Assembly, but was not reported out of the education committee of the Senate.

May I thank you for the compliment (altogether unexpected) conveyed by the nice place you saw fit to give to my article anent the "Country Church" discussion in your publication. Candidly, I believe that the responses you get will prove that just such fearless openings as you present will give outlet to clean and independent thought that has too long been trying to hunt excuses for silence, when the real reason was cowardice. It is quite apparent that the trouble is caused not so much from an occasional taste of gnats, but from a steady diet of camels.—John L. Wilson, Titusville, Pa.

Opportunity Calls from CANADA

Visit Canada this summer—see for yourself the opportunities which Canada offers to both labor and capital—rich, fertile, virgin prairie land, near rail-ways and towns, at \$15 to \$20 an acre—long terms if desired. Wheat crops last year the biggest in history; dairying and hogs pay well; mixed farming rapidly increasing.

Homeseekers' Rates on Canadian Railroads

If you wish to look over the country with a view to taking up land get an order from the nearest Canadian Government Agent for special rates on Canadian railroads. Make this your summer outing—Canada welcomes tourists—no passports required—have a great trip and see with your own eyes the opportunities that await you.

Holsteins—Why They Lead—By M. C. Bond

The Cave Man Knew Nothing of Etiquette

"For Manners Are Not Idle—But the Fruit of Noble Minds"

By GABRIELLE ELLIOT

THE primitive cave-man, gnawing a bone in haste lest some stronger savage grab it away from him, was down to fundamentals. Food was a necessity and so, in those days, was brute strength to protect his meal. It was not until men trusted each other enough to eat together that table manners came about.

In other words, good manners, at base, spring from consideration for others. There are endless definitions of etiquette, but a poet has touched the heart of the matter in a single line—"For manners are not idle, but the fruit of noble minds." What better explanation of their meaning could you have, or what better reason for their continuance?

Take, for instance, just one bit of table etiquette. The hostess is always served first. Off hand, you might think it more polite to serve the guest first of all. But in the old days, after the cave-man epoch, but before civilization reached its present state, poison all too often found its way into the most tempting dish. If mine host tasted it first, one could be sure of his honesty and reasonably safe as to his servants.

Now if that medieval touch of caution were the only reason for the order of service, the custom might long ago have died out with other bygone manners which applied to an entirely different mode of life. But it lives, I think, for a very good reason—again based on consideration. Not every guest is experienced in table etiquette; there are always little variations, too, in different localities. But if the hostess is served first, it seems to break the ice; it sets at rest questions as to which spoon or fork to use and it makes the guest more at ease and therefore more apt to enjoy the dinner to which he or she has been invited. A new reason, more appropriate than the old, has kept alive the custom. You will notice, however, that when a hostess serves tea, for instance, or any informal, side-porch refreshments, she always passes both the liquids and the sandwiches or cakes first to her guests, before helping herself. This is more natural and also seems more courteous than for the hostess to pour out first her own cup of tea or glass of lemonade, and therefore has found general acceptance.

Manners First from the Heart

So, you see, manners should come first from the heart. They all did originally, and the ones which still have a meaning are the ones which count. They may be—in fact they are—an extra, something for which the cave man or the primitive savage has absolutely no use. But, to use the adjective of the line I have quoted, they are distinctly not "idle." They are a product of civilization, the "fruit of noble minds," and even the most stilted custom had its origin in thoughtfulness for the comfort of others.

That is why I feel sorry for people whom I hear speaking scornfully of good manners, as it is now somewhat the fashion to speak. I cannot help feeling that they do it in self-defense. They must be conscious of a lack within themselves, and it is always easier for weak human nature to assure us that what we don't possess ourselves, is not really worth having, than it is to face the music, recognize our failing, and set things right. The genuinely considerate man or woman wants to do things in the way which will make life most comfortable for others. Manners may be a superfluity, but they mark

the difference between the savage man, who thinks only of himself, and the civilized man, who has learned to think of others.

For this reason, for instance, all quarrels must be buried at a friend's table. In the olden days, real bloodshed was avoided by the understanding that the respect of two enemies for their mutual host forced them to lay by their private quarrel until from under his roof. Now-a-days, unfortunately, there are still disagreements, but if people who do not ordinarily seek each other's company happen to meet at a friend's, they must ignore their differences and meet with at least an outward appearance of harmony. This is not hypocrisy; it is simply ordinary consideration for the hostess who has invited

perfectly at home in society keep joining and leaving a group, forcing the men and the younger girls to rise each time, interrupting the conversation, not staying long enough to sit down and join in it herself, yet keeping the men awkwardly on their feet. This was a case in which they might easily have grown careless—in fact, they very soon did—because they were made to feel foolish in observing an ordinary courtesy. The discourteous person was the woman who for all her clever talk and social poise, lacked real consideration.

"For manners are not idle, but the fruit of noble minds." Every act of etiquette at one time or another had a reason for existence. If the need has entirely passed, this fruit of noble minds will in the course of time wither away like others and be discarded.

If it still expresses, even in a slight degree, the respect and courtesy which human beings owe to the comfort and peace of mind of each other it will continue.

If good manners matter to anyone, they matter to everyone. It is not what our manners make of us, but what we make of our manners that counts. They are not applied from the exterior, they come from within, the true fruit, which everybody will recognize, of noble minds.

If any individual problems of etiquette are troubling you and I might be able to suggest a solution, please give me the privilege of helping you. You may write me in care of the American Agriculturist, 461 Fourth Avenue, New York City. While I cannot promise to speak accurately for Mrs. Grundy, because I believe in the spirit of the law rather than the letter, I shall be glad to do my best for you.

* * *

Owing to the fact that I missed part of Mrs. Brigden's talk on the "Abiding Place of Little Children," I wish to take advantage of your generous offer to send me a copy of the same as was announced at the close of her address. Your radio program is certainly fine and I wish to thank you for the entertainment of many evenings which I have enjoyed as one of your invisible audience.—C. K. * * *

Mrs. Brigden: Thank you for your fine address given from WEAF, which I enjoyed hearing so much. I believe I heard you speak when you were in Trenton, at the New Jersey Home Bureau Conference, but your voice was clearer over the radio than in the ballroom. I have been very much interested in your Committee of Twenty-one on rural schools in New York. I would appreciate an extra copy of the talk which you broadcast.—MRS. J. L. H. * * *

Please send me copy of the talk by Dr. Royal S. Copeland on "Rural Health." We would like to know if Dr. Copeland had any particular kind of bread in mind, white or brown bread. We enjoyed the talk very much. Three of the family had bread and milk before they went to bed.—MRS. H. VAND. * * *

Will you kindly send me copy of the talk given by Mr. Enos Lee. His talk was particularly interesting to us as Mr. Lee happens to be our cousin.—G. J. L. * * *

"Will you please send me a copy of Senator Royal Copeland's address on bread, and milk that I may read it to the children."

No "Cave Man" Stuff

ACCORDING to Miss Elliot, the household editor of American Agriculturist, it is no longer necessary for man to hang on to a bone and growl while he gnaws at it to keep the other savages away. "Good manners," says Miss Elliot, "are just a natural result of courtesy and consideration which are a part of our modern civilization."

If you did not have the good fortune to hear this interesting talk over the radio on Wednesday evening, June 6, at 6:50 P. M., standard time, we are sure you will enjoy reading it on this page.

By the way we call your special attention to the change in time of broadcasting American Agriculturist farm radio program. This was formerly given at 7:30 daylight saving time, which is 6:30 standard time. This of course was too early for farmers at this time of the year. By special arrangements, with WEAF station, we have advanced this time from 6:30 to 6:50, or ten minutes to seven, standard time, every Wednesday evening. This ought to enable most farm families to "tune in" at just about the time they have finished supper.—The Editors.

both guests and whose gathering would be quite spoiled if there were any evidence of ill-feeling.

Not Unlike To-day

Once it was not safe for a woman to venture in the streets alone. When she stirred abroad, a man, usually with a good sharp sword, escorted her, and while she walked close to the houses, he took the outside, to protect her from jostling or annoyance. To-day, a well-bred man instinctively takes the outside when walking with a woman. Although our street conditions are a far cry from those quarrelsome days, there is just enough need for such protection, slight as it is, to make it a matter of courtesy and therefore of necessity. Carelessness in observing such a bit of routine politeness on the part of a man who knows it should be observed, shows that he might easily lack consideration in things far more important.

Men used to raise the visors of their helmets to show their faces to friends. To-day, a man raises his hat to a woman of his acquaintance. It is not a useless ceremony, but a mark of respect. The man who neglects it, or just lazily raises his hand to the brim of his hat, shows something besides mere carelessness in observing a traditional gesture.

Consideration of Another's Feelings

In the same way, women who ignore or resent trivial customs of the sort may be overlooking the only reason for good manners—the consideration of another's feelings. I have known women who, naturally enough, resented it if men did not rise when they entered the room or joined a group. Yet I have seen a woman who considered herself

Holsteins—Why They Lead

For the Average Farmer They Are Well Adapted to Fluid Milk Production

I WAS born and brought up on a small farm in Vermont where my father kept Jerseys for a number of years and made butter for retail trade. I shall never forget the decided breed prejudice which a neighbor of ours had and I remember distinctly hearing him say a great many times that if he knew where the last Jersey in the world was, that he would walk ten miles barefooted to kill her in order to know that the breed was extinct. It just happened that this man was a Holstein breeder of the poorest sort, keeping many of his cows for nurse cows to raise veal and doing very little milking.

After I came to Madison County, New York, I found myself surrounded by many Holstein herds and learned to acquire a decidedly wholesome respect for the breed. Breed prejudice is a great detriment to anyone and especially to the breeder himself. Any man who is prejudiced is almost sure to overlook his own weaknesses and faults, and consequently will be handicapped in progress. However, the question occurred to me—why was it that so many Holsteins were kept in Madison County, the other breeds being hardly represented. I have come to the conclusion in spite of the fact that the Guernsey cow has a particular adaptability to retail milk trade that the Holstein cow is the best adapted to milk production for the average farmer. Most of the milk is shipped to cities, is standardized so that it is of nearly uniform percentage of fat and individual breed milk loses its identity. Therefore, I concluded that the reason the farmers in Madison County kept Holsteins was because the greatest source of income to these men was from the sale of fluid milk, most of which went on to a New York market.

Some Phenomenal Records

The Holstein cow gives milk in great quantities. One of our leading cows averaged for a week 143 lbs, or 62 quarts a day. Another averaged for the year over 100 lbs. or 47 quarts a day. These of course are phenomenal records, but the average cow in the average farmer's herd of the Holstein breed will give more than similar animals of the other breeds, and pounds of milk is still the deciding factor with these men.

The Holstein cow originated in Holland and adjacent territory in Germany. She is black and white in color and the largest of the four dairy breeds. She has been accustomed in the old country to graze on the level lowlands of the Dutch people and be cared for by the little Dutch maid with her

By M. C. BOND

wooden shoes. Importation to America began at an early date and New York State received a goodly proportion of these animals. Of late years importation has not been of consequence since American bred animals have answered our breeding necessities. The capacity of the Holstein cow to consume food and produce milk is the big factor which the progressive farmer is interested in.

The breed is well organized. The National

stock. The grade approximates the pure bred in efficiency of production and it is only a matter of time when the farmer who is developing a herd from scrub stock will work up through the grade to the pure bred, the big advantage being that the offspring from pure breds can be relied upon much more safely to be consistent and good producers than can the calves from grade cattle. Just a short time ago a farmer was telling me of a remarkably good grade that he had and he said the four heifers from her were of practically no value. This is one of the discouraging factors of breeding grade cattle.

Every organization

needs to clean house occasionally. At this time of the year our American women are thinking of cleaning house the length and breadth of this country. Breed limitations may be somewhat eliminated through the process of cleaning house by selection, followed by careful breeding. The high prices paid for Holsteins during the war and just previous were quite largely the cause of so many poor pure breds being raised and sold and consequently we have now quite a number of these scrub pure breds, animals of poor conformation and low production, bulls which constantly produce offspring with sloping rump, and

weak constitution. These animals should quickly and unqualifidely be disposed of to allow animals which are the true type to do their work. It is only by seeing mistakes and recognizing poor animals, then selecting and disposing of these—not to any other breeder but to the butcher—that any breeder can progress and it is to the interest of the breed as a whole that they advocate the elimination of these undesirable animals, even though they be pure breds.

The Future is Bright

The future is bright. The system of Advanced Registry records shows that the Holstein cow holds practically all the world's records for milk and butter production. There are over sixty cows which have produced 1,000 lbs. butter in a year in the Holstein breed and very few in other breeds. The Holstein is prolific. There are several century sires, or sires having over 100 producing daughters. The cows are good breeders over a long period of years and both cows and bulls are prepotent, carrying on to their progeny their good qualities of production and individuality.

This insurance of good production is supplemented by the food value of Holstein

(Continued on page 491)

Judging County Holstein Exhibits at the New York State Fair. Come to the Dairy Show next October and you will see the greatest exhibit of dairy cattle ever assembled in the East

Association, which is located at Brattleboro, Vt., attends to the registration and transfer of the animals and membership of the organization, the membership fee being \$25 and female registration \$1 and transfer of ownership \$1.50. There are nearly 20,000 members in the Holstein-Friesian Association in the United States, New York having 4,394 in June, 1922. In addition to this National Association there are a great many county and local breed clubs and several State Holstein associations. All of these organizations attempt to coordinate and work for the promotion of the breed. The Extension Service has been developed with the aim of its educational aid to the breeders, and we have learned that a great many men have changed from grades to pure breds through the efforts of this and other institutions.

Pure Breds Earn 47.8 per cent More than Grades

I have just received the report from the United States Department of Agriculture, showing from some of their investigations, that pure-bred dairy cattle have an earning power 47.8 per cent greater than scrub stock. These figures are for production at the pail only and no account is made for the surplus stock which of course will sell at a considerable profit over the surplus grade

VOL. 111 June 9, 1923 No. 23

A Word for the Holstein

IN this issue we are calling attention to that wonderful breed of dairy cattle, the Holstein. In the May 5 issue, we told you about the Guernsey, and in early numbers we shall have something to say about the Ayrshire and Jersey.

The other day we paid a visit to what is probably the most wonderful dairy cow in the world, Glista Ernestine, the Holstein record breaker owned by the New York State College of Agriculture. Her picture is inserted on the front cover of this issue. Her udder is so large that a dishpan, set on the floor, has to be used when she is milked.

Glista is nearly fifteen years old. She has produced regularly since calving the first time. This in itself is a wonderful record when we realize that the average number of lactations per cow is not over five. In seven different lactations, Glista Ernestine has produced over 30 pounds of butter in a week. In addition to this, she has two records of producing over 100 pounds a day for 100 consecutive days.

Of course, individuals like this are rare, but they serve as inspirations and ideals toward which all dairymen can strive; and it is rapidly becoming more and more necessary for farmers who wish to make a living from cows to get high standards in line and constantly work to attain them.

Service Institutions

A RECENT report issued by Dean A. R. Mann, of the New York State College of Agriculture, shows that in the year 1922 the college made chiefly through its extension forces 1,374,349 face-to-face contacts with farm people. Not all of these were different persons, as in some cases the same person asked for and received help more than once.

Through its extension service proper, not counting the county agent service, the college came in contact with over 200,000 people. This particular service includes extension schools, farmer's institutes, lectures

by college specialists, demonstration meetings, conferences, farm visits, farmers' field days, Farmer's Week, and poultry and fruit judging schools. In the home economics work, including conferences, demonstration meetings, lectures, institutes and extension schools, there were 48,000 personal contacts. The county agricultural agents made over 500,000 contacts, the home demonstration agents over 381,000, and the junior extension system 203,000.

When we realize that this is the record in one year in only one State, that similar work is going forward in nearly all of the States, and especially that farm people themselves take the initiative in asking for this service, we can get some realization of what our Colleges of Agriculture are doing for the farm business. The above mentioned service does not include the resident teaching work which gives thousands of our young men and women not only the scientific training needed in the management of the modern farm and the farm home but, moreover, instills in them the thought that working a farm and managing a farm home are two of the greatest jobs in the world.

"There Is No Precedent"

WE sometimes get a little impatient with the legal profession and with other of our over conservative friends when they constantly hold up action on some needed measure or reform because it has never been done before. "There is no precedent" is one of the greatest curses of advancing civilization. Even the inventor of the first horseless wagon was a slave to precedent, for he put a dash-board and whip-socket on the first automobile. If Gutenberg had stopped because he could find no precedent the printing press might not have been invented. If Columbus had searched for a precedent before crossing the "Sea of Darkness," he never would have started.

If all those millions of brave souls of past and present who have opened up a new world for us in literature, invention, science and religious thought had stopped to look for precedents for their action, they would have taken none. If all had agreed that "it can't be done," and acted on that principle, then the human race would still be monkeys, for there could have been no evolution.

Custer's Last Man

THE death on May 22, on a reservation in Montana, of Curley, a Crow Indian, will recall to the minds of older people the excitement caused by the massacre of Custer and his soldiers on the Little Big Horn in 1876. Curley was one of Custer's Indian scouts, and was the sole survivor of the massacre. He escaped by mingling with the Sioux after the battle. Custer's entire command was wiped out in the fight with the Sioux who greatly outnumbered the white soldiers.

Curley, the scout, was sent back to bring up reinforcements; but on his way back his horse was shot from under him and he returned on foot to Custer where he took his part in the fight. He said that General Custer was the last man to fall after the Sioux tried to take him alive.

Nothing in the known history of mankind is more wonderful or romantic than the conquering and the settlement of the great West. Within the memory of living men thousands and thousands of square miles of the most fertile farm land in the world were overrun with wild game of almost every kind and description. Buffalo by the millions roamed the great plains. All of this great country was practically unknown, except to the Indians.

After the soldiers began to get the Indians

in check, there came the great cattle ranges and the cowboys, and later the border ruffians and gunmen.

To-day, only a comparatively few years later, the buffalo are gone, the Indians are peaceful farmers on the reservations, the cowboys are plow-boys, and there are more gunmen in New York City than in the whole wild West.

The Square Pegs

RECENTLY we had the pleasure of visiting two farms, one specializing in dairying and the other given up almost entirely to fruit. Each of these farms had been made to pay right through the hard times. As we were being shown about each farm by the owners, and saw the results from the knowledge and interest that they were putting into their jobs, we were thinking that the chief reason why these men were successful, was their love and enthusiasm for their work.

The dairyman had a better knowledge of cows than probably any man in our acquaintance, and the same might be said of the other farmer and his fruit trees. The dairyman knew and had at his tongue's end all of the pedigree and record of every individual in his large herd. He could tell almost by instinct just the minute any cow began to get a little off. He came by this knowledge because he loved cows and knew cows, and would rather work around cows than do anything else. He probably would not have made a great success with fruit. The other had watched the trees in his great orchards grow until he knew what each one's peculiarities were, when it was doing well, and what its limitations were. He knew all of this by spending hours of his life in the orchard at times when other men not so enthusiastic or with less love for their job, would have been resting.

With both of these men their vocation was also their avocation and their greatest pleasure. In thinking about them and their success, we thought that it was unfortunate that most farmers are farmers by chance rather than by choice. Many of us stay on the farm because we were born into the job, when as a matter of fact, we might have made a good deal better school-teacher, lawyer or mechanic.

As our agriculture grows older, it grows much more complicated, requiring more and more skill to make a go of it, and requiring especially a liking for the job. Therefore, we think that when a boy shows a distaste for farming, he ought not to be encouraged too much to make it his life business, for very likely he will be a square peg in a round hole.

But, if on the other hand, a boy shows a decided liking for farming, for dairying, fruit growing or poultry, then he should be encouraged to get all of the education and practical training possible, with the thought that if he has knowledge and love for it, he can obtain as much success and happiness out of farming as from any other business.

A Bill That Ought to Have Passed

ONE of the bills which we were sorry to see fail of passage during the last days of the New York State legislative session was the resolution providing for a legislative committee to study cooperative marketing and to report back to the next legislature. Every farm organization in the State and nearly every farmer who understood the purpose of this resolution, endorsed it because they thought there was some opportunity for such a committee to be of service in finding and helping to correct some of the present marketing evils with which farmers and consumers are constantly contending.

The Good "Young" Times

The "Old Times" May Have Been Good—But, Who Wants to Go Back to Them?

I READ with much interest the article on "The Good Old Times," and at the editor's invitation to us of the younger generation, I could not refrain from speaking in behalf of the modern times.

When we look down the tortuous path of years to the Salem witchcraft days and the dark epoch when hanging was the penalty for no less than a dozen crimes of different nature, we can not but admit that this old world of ours *must* be growing better, wiser, more just and more merciful. Surely it is but a merited tribute to Christianity to admit that it keeps getting a firmer and better foothold through each cycle of time. Why? Population is increasing the good with the bad. And since Good is the stronger, it naturally follows that Bad is losing ground.

Of course there will be crime as long as the world lasts, and knaves in each generation. Evil will go on lurking in movie theatre and dance hall—for evil will find an inlet anywhere; it is a thing which will never modernize. It ran rampant long before the movie came into existence and when dancing was included in sacred ceremonies. There are good, bad and indifferent movie films on the market; as many clean, wholesome, instructive ones as there are the reverse. "Good or bad—choose," is a world old test for the moral fibre of every generation.

But the headstrong youth of to-day would have been identically the same under the restrictions of long ago. Discipline of the young was in those days, on an average, more rigid than now. Witness the district school of a hundred years ago where the ferule and the birch were absolutely essential to the maintenance of a well conducted school. These instruments of torture are practically obsolete now—indeed a child who can be reached no other way is a rarity in our present day schools. Therefore our modern methods of child training also prove evolution along those lines, for the children are the better for it.

No Longer Places for Vengeance

Prisons to-day are more places of reformation than of punishment (or vengeance). Our institutions for the insane are really hospitals to treat the mind diseased. Once they were merely places of confinement, and many a dark tale has been told of almost unbelievable brutality and inhumane methods of subjection.

Compulsory education in many States to-day is proving the psychological adage "Education broadens the mind." Eighty years ago such a thing as enforced attendance was unknown. A very large percentage of the voters were ignorant and illiterate. Politics had a far greater scope for "Rottenness" than they have at the present day.

Here in the country the rural free delivery and parcel post system are indeed a boon to the farmer, for they bring the city to his door, figuratively speaking. He can trade, too, with the city stores without bothering to crank up his flivver and burn gallons of

By A. A. READERS

gas—though he can at a pinch—and is fortunate at being able to do so.

Then, too, time and evolution have brought to mankind many life-saving devices that we who are accustomed to, fail to fully appreciate.

In the old days there were many "ships that never returned" and lives of waiting ones that were one long heartache of suspense and anxiety. To-day we think no more of seeing our friends off on an ocean liner than our great grand-parents did in saying adieux to loved ones taking a lengthy

of death, while in the good old days similar cases met only the useless ministrations of a midwife or a doctor whose specialty was not always obstetric cases. The result, with no alternative must be a strong, useful life snuffed out—a home made desolate.

The munificent wage of the present day, despite the high cost of living, is yet another evidence of progress and the improvement of conditions. Long ago when a widowed mother found herself the sole breadwinner for her little brood—wages were low—very low for women's work; often from fifty cents to one dollar per week, seldom more—to keep her little flock together and to stave

off the grim wolf was an impossibility. She was therefore obliged to "bind out" her fatherless little ones as best she might, often to lives of abuse or moral corruption—robbed of their birthright; the influence of mother-love.

To-day the widow, when not protected by insurance, may secure a lucrative position and thus keep her little ones together to grow up under her guidance and protection.

None of us, I am positive, would be willing to go back and live in "The good old times" even though they might have held much to be desired. —Mrs. WM. W., Wadhams, N. Y.

Orchard's where I'd ruther be—
Needn't fence it in fer me!—
Jes' the whole sky overhead,
And the whole airth underneath—
Sorto' so's a man kin breathe
Like he ort. and kindo' has
Elbow room to keerlessly
Sprawl out len'thways on the grass
Where the shadders thick and soft
As the kivers on the bed
Mother fixes in the loft
Allus, when they's company!

Plague! ef they ain't somepin' in
Work 'at kindo' goes ag'in
My convictions!—'long about
Here in June especially!—
Under some old apple-tree,
Jes' a-restin' through and through,
I could git along without
Nothin' else at all to do
Only jes' a-wishin' you
Wuz a-gittin' there like me,
And June was eternity!

—From *Knee-Deep in June*, by James Whitcomb Riley.

river voyage—because we know and trust that wonder of the air—Marconi's wireless which on lightning wing over the briny deep safeguards those we love who traverse "That wild, wet road, called the sea."

Scarcely second to the wireless for efficiency and safety is the less complicated, yet indispensable telephone. When little Bobby terrifies his parents in the still watches of the night by a grim wrestle with that deadly enemy of budding childhood—membranous croup, a hurried call over the wire brings the doctor in a few minutes by aid of his trusty car, whereas in olden times, father must "hitch up" and drive madly over miles of bad country road, leaving the anxious mother alone with the little sufferer who often was beyond all aid that was earthly when father at last returned with the doctor.

Advances in Medical Science

Another instance of the lack of timely telephone and chugging motor salvation is this: Two young men, in our town—long before my day—after a few days of physical torture, died of a mysterious ailment diagnosed as "inflammation of the bowels," when a brief trip by auto, the hospital and an operation in each case would have brought relief and a new lease of life to those who were doomed by that once dreaded malady—to-day known and little feared—appendicitis.

Many maternity cases have been hurried to the hospital by auto, at the eleventh hour, and mother and child snatched from the jaws

much. Remember, I am speaking from experience. I live on a farm.

The usual course of procedure for the one who wishes to bathe is to secure the privacy of the kitchen while the remainder of the family are notified to keep out. The usual privacy of the bathroom is lacking. A tub is dragged in. Water lugged from the spring or well, and hot water is added from the stove or range.

'Twas Ever Thus

Usually the remaining essentials for a bath are gathered together and a lot of time is used up in this way. In the course of the bath the usual ring of water is splashed around the tub. Generally the most inopportune time has been chosen since about the time the bather is busy, each one outside of the room thinks of something they need and it is in the room the bather occupies. He or she is interrupted to deliver the needed articles to the door.

The tub must be emptied. Soap, towel, etc., must be placed in their respective places. Considerable fuss for a bath. Any wonder lots of people dread it and go without. They are indifferent to the merits and virtue of bathing. Stop a moment and think—engaged in dirty work; go to bed dirty, get up dirty, stay dirty. Is it any wonder the doctors and undertakers are reaping a harvest?

Very few families need be without a bathtub. You may think you cannot afford it.

(Continued on page 499)

The Home of His Fathers

The Story of the Man Who Would Not Sell His Farm

By J. VAN WAGENEN, JR.

"And Ahab spoke unto Naboth say-
ing: 'Give me thy vineyard that I may
have it for a garden of herbs because
it is near unto my house and I will give
thee for it a better vineyard than it,
or if it seem good unto thee, I will give
thee the worth of it in money.'"

"And Naboth said unto Ahab: 'The
Lord forbid it unto me that I should
give the inheritance of my father's
unto thee.'"

WE made a little group who sat
around the fire one winter day
between sessions of the Farmers' In-
stitute and talked of cattle and crops
and neighborhood happenings and

J. VAN WAGENEN, JR. right to fill out
the picture or to

add to the colors—nevertheless I insist
that I am repeating the story as it was
told to me.

The place was out in the lovely
Finger Lake Country of Western
New York by the side of one of those
noble lakes which are the outstanding
physical feature of that fat land. I do
not know who first hit upon that happy
phrase—"The Finger Lakes", but it is
a descriptive inspiration for all these
lakes are long and narrow and all run
north and south and all lie parallel to
each other like the
fingers of a man's
hand. It is a phrase
so apt—so fortunate
—that through all
time to come, that
region can never be
known by any other
term.

I trust that I am
loyal to the old
counties of Eastern
New York, to the
Hudson Valley, the
Catskills and the
Hill Country. We
have more of history
—more of tradition.
We are richer in
stories and folk-
lore for we were an
old settled region;
in many cases for a
full century before
the first settlers (to
use a quaint phrase
of the Ithaca pio-
neers) "cast seed" in the fertile soils
of Western New York. Romance and
legend cling to the Eastern Counties. I
do not suppose for example that Wash-
ington Irving could ever have found
in Western New York any such fertile
soil for story-telling as he cultivated so
fruitfully in the Hudson Valley. But
agriculturally the Finger Lake Country
together with the Ontario Shore is the
best of our State—less rugged, with a
more uniformly fertile soil and with a
kindlier climate than the Eastern plat-
eau and in addition made beautiful
forever by those long reaches of deep,
clear, cold water filling ancient glacial
valleys. The Red Man knew and loved
the Finger Lakes, for among them was
the site and capitol of the Iroquoise
Confederacy which ethnologists are
agreed represented the highest develop-
ment of Indian culture to be found in
the United States. All in all, to possess
a farm in this fair and favored region
is a birth-right not easily equalled.

The Story of the Settler

But the simple tale that I began to
tell is this:

Down by the shore of one of the
largest of these lakes is an old farm-

house that stands under old, wide
spreading trees. The trees were old
when the first comer began to chop out
of the forest a spot for his cabin and
he spared them because he was a man
who took thought for the future, who
knew how beautiful is a great tree, and
how many generations of men must
pass away before an oak or hemlock or
pine attain their full lusty prime. This
Puritan pioneer and his young wife
were a part of that great wave of New
England emigration which flooded into
Western New York during the first two
or three decades following the close of
the Revolutionary War. To men
accustomed to the stone-strewn, thin
New England fields it must have seemed
another Promised Land—a new Canaan
—when they came into the country of
which I write.

The old house by the lake was built
by the son of the man who spared the
roof tree and it covered the cellar hole
of the first cabin. He reared it when
the rigors of the pioneer period were
giving place to a secure and substantial
civilization. In size it was generous and
it was built upon honor by a master-
craftsman out of the oak and pine that
grew about it. The years had dealt
very kindly with the house and farm
and it had gathered to itself what only
the years can purchase—tradition. On
it everywhere was graven the record
of the passing generations.

Down Through the Generations

Through the rear door that looked
toward the farmyard and barns had
passed all the flooding traffic of those
years—the simple, homely traffic of the
farm. Through it had passed the heavy,
rasping feet of man with milk pails
and food-stuffs for the cellar—the feet
of generations of men faring forth for
the plowing or the harvest and return-
ing again eager for the abundant tables.
Through that door had gone the lighter

"The Finger Lake Country—Through all time to come that region can
never be known by any other term"

footfalls of busy—O so busy—women
going for the hanging of clothes or the
feeding of poultry—the bringing of
wood for the fire or the gathering of
vegetables from the garden—the multi-
tudinous, overflowing, crowding tasks
of the women of our farms.

The Doorstone Worn Smooth

Through it passed a long proces-
sion of the eager, restless storming
feet of children who played around that
door or entered it to be comforted in
their little griefs by a mother's kiss or
went noisily trooping through it with
dinner pails as they set out for school.
What a long, long pageant it had
been—sometimes gay, sometimes grave,
but always ready for the day's work
and the set task. No wonder the door-
stone was worn smooth and hollowing
beneath all those thronging feet.

The other side of the house looked
toward the highway and the lake and
here was the front door with its fan-
light above it. This door opened into
a hall with a big room on either side
and here was the sanctuary of the more
formal, less intimate life of the farm.
Here in the old days—much more fre-
quently than now—had been held the

old time country merrymakings. Here
in the room on the right hand the
daughters of the house had stood side-
by-side with the chosen lover to re-
ceive the sanction and approval of the
church. Here men and women of the
farm had at length had homage done
them as they held court in the austere
dignity of death. Through that same
door in the thrilling days of '61 a son
of the farm had gone bravely forth in
a uniform of fine blue cloth and with
pride in his eye and step. And up in
the family burial plot beneath the pine
tree a tiny faded flag waved in the
breeze and a stone was set up in loving
memory of Captain ——— of the —th
Company, Infantry, New York Volun-
teers, but the Boy himself slept well in
the sandy field of the Battle of the
Wilderness outside of Richmond.

The House Still as of Old

And the grandson of the pioneer had
kept the house outwardly as of old—
plain and severe with white walls and
green blinds, but within he had brought
to it modern conveniences and comforts
for God had blessed and established
the work of his hands. Around the
house was the well-kept farm with
orchards and corn fields and acres of
wheat and generous gambrel roofed
barns and a wind break of evergreens
on the north and west and in front the
smooth highway and just beyond the
shore line of the lake and the water
which took on all the moods of the
sky above it—sometimes motionless and
glassy on breathless summer days—
sometimes flashing and sparkling when
the heavens above were blue and the
breezes ruffled its surface—sometimes
dark and gloomy and sorrowful under
leaden November skies. Seventy years
and more the man had lived by the
side of the lake. He knew it in all its
moods and changes and its face was to
him the face of a loved, familiar friend.

Now it chanced one perfect summer
day that a most imposing car came
rolling leisurely
along the highway
and just on the top
of the rise of ground
by the house it drew
to the side of the
road and the occu-
pant stepped out
and for a consider-
able length of time
carefully studied
the landscape and
the surroundings. It
was early July "the
prime of summer
time." A few tow-
ering clouds were
serenely sheparded
on a field of deepest
blue. A pleasant
summer breeze was
blowing out of the
northwest and the
lake, blue as the sky
above it, was wrin-
kling and flashing
and here and there

a tiny white cap broke broke on the
blue, and here and there were acres of
purple where the shadows of the drift-
ing clouds swept swiftly over it. Now
and then the graceful form of the un-
resting lake gull sailed across the field
of vision. And from where he stood
the man could catch the regular, rhyth-
mical swish-swash splash of the little
waves breaking on the pebbly shore.
Three miles away on the other side of
the lake stood out the swelling hillside
with country roads etched on a green
background and with patches of wood-
land and white walled farmhouses and
big barns and the church spire of the
hamlet on the hill.

All that Could be Desired

Then he turned and his eye took in
the old, well-kept farmhouse under its
mighty trees. He knew little of crops
but he saw the beauty of the bronzing
wheat that rippled and bowed to the
breeze and he felt the charm of the
young corn rows getting tall enough
so that each plant danced and gleamed
in the sunshine. But after all, crops
did not greatly interest him. He had
money—money enough so that he was
(Continued on page 491)

Pigs and Water!

Do We Realize the Necessity of Water for Hogs?

IN my years of breeding pure-bred swine, I have tried to give my herd whatever I thought was best to their rapid development, and have studied all the various rations that can be made up of the grains and grasses grown on the farm, as well as those that could be made from the various by-products of the mills. These I have fed in various ways, sometimes dry, generally mixed with water into a rather thickish slop or mush. I have at times been able to get separator milk from the creamery, but this is generally so stale and so diluted with the washings of the factory that it is so unfit for feeding a good pig that I abandoned it some years ago. I have many times tried to convince myself that with a wet feed my pigs did not need special attention given to waterings—yet I have also given up this erroneous idea, and I presume that there are "others."

By R. B. RUSHING

Think over these matters about watering your hogs and I believe many will awaken to the fact that they have been neglectful in that important part of the caring for their herds.

GENTLE SOWS ARE MOST PROFITABLE

R. H. NEILL

There have been volumes written about the feed and care of brood sows—all good advice, but I have found that it isn't all care and feed that constitute success in hog breeding. I have kept a record of my sows and it seems that a good brood sow is born so. Some sows would not be profitable even with the best of care. I wouldn't keep a sow on my premises that was clumsy, nervous or cross.

A neighbor was complaining to me about his sows killing so many of their pigs. When I was about to step into his pens to look at them, he called to me, "Better take that fork with you, the sow is pretty cross." I soon found this to be true. The sow came bounding out at me with her mouth open, forcing me to take refuge on a nearby fence. So I kept out. It wasn't surprising that she had killed most of her litter. As for me, that sow wouldn't stay on my premises longer than it would take to fatten her for the market.

It does pay big to have gentle sows. A tame sow will look after her pigs much better than one like the above mentioned. Because of her fear she thought her pigs were in danger, when I stepped into her pen. Her pigs will grow up to acquire the same fear. Pigs from tame sows naturally grow up tame. And I have found wild and nervous hogs harder

to confine, in regard to fences.

I teach my sows to have no fear of me, by petting and talking to them when among them, and always make special efforts to gain their confidence during the few weeks before farrowing time. As a result, I need not go armed with a pitch-fork in caring for them. I have often climbed into their pen and played with their pigs, the sow remaining perfectly quiet, having no fear for her little ones.

A HOUSE FOR HOGS ON PASTURE

C. M. BAKER

We find that an A-shaped house, shown in the accompanying illustration, is quite satisfactory for housing sows and pigs in the springtime when they should be on forage to secure plenty of green feed, such as Dwarf Essex Rape or alfalfa, and exercise. The house in the illustration is 7 feet wide, 6 feet high and 10 feet long. It is made out of matched pine lumber, so that it is tight and warm enough, and a sow and pigs may be kept comfortable during cold spells. It has a wooden floor.

Such a hog house can be used satisfactorily at farrowing time, even during cold weather, if some attention is given to providing the sows with plenty of straw, and when the weather is extremely cold a lantern may be hung in the house.

A small swinging or hinged door is placed in the back of the house, which should be raised during warmer weather in order to provide ventilation; or, if desired, an entire side may be raised and propped up, thus making a cool house during hot weather. This also makes it easy to clean it out and disinfect it quickly. The house is on runners and may be pulled about in any location by a horse.

An Ideal House for Hogs on Pasture

Water in Addition to Wet Feed

Now, I want to assure my fellow breeders that pigs as well as older hogs will drink lots of pure water, even when fed on a feed mixed with either water or milk. During part of the winter, I feed wet feed in the morning warmed by a steamer, and at one-thirty o'clock in the afternoon I drive the feed wagon over the entire line of pens and find that the brood sows with pigs and hogs of various ages have been drinking almost two barrels of pure fresh water from the well, and have seemed to enjoy it as much as they did their warm feed in the morning. At night I give them a feed of ear corn.

There is nothing that will quench thirst but water. The hogs may have just been fed even with warm wet mixture and yet they will turn to the other trough and take a few swallows of water. If this is not evidence enough that hogs need water, then I am mistaken. The question is—how to furnish fresh water at all times.

It is said that about one-half of a pig's weight is composed of water. A growing pig contains more in proportion, however, than does a mature fat hog in proportion to weight.

Before Them at all Times

To grow young pigs and get best results they must have sufficient water at all times or at frequent intervals during the day. If possible it would be far better to have good, pure, fresh water where the pigs can go at will and drink as often as they will. Pigs, like sheep, do not drink much at a time, but if water is where they can go at will they will be found drinking a little quite often.

One will often notice pigs drinking from filthy pools or puddles, where the water is not fit for a well-bred pig to drink. This is where germs often get into the system of the animals and cause trouble, and soon disease follows. I urge breeders and farmers who are trying to get good results in swine growing would give this matter of good drinking water for their animals more thought, and I feel satisfied that it would be found that better results would follow.

Automatics Clog Up

There are many self watering devices that at first sight look good, and I have had experience with most of them, but without entire satisfaction as those that have valves are sure to get clogged by dirt from the snouts of the pigs, settling in the cup and clogging the fountain, which of course causes the fountain to empty itself quickly. Then there are those in which a hog can get its feet, which will also close the works.

Keep your share of \$60,000,000

which would be saved this year if all farmers bought the best implements made

under the Moline Plan

It cuts out all the wastes of old-fashioned marketing methods and shares the savings with you.

See prices at the Moline Dealer's store. Let him tell you why he can sell at prices no other dealer can match. If no Moline man is handy, mail the coupon now.

The farmer must pay less for what he buys—and get more for what he sells

4 TIMES Around the World with ONE OILING 100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The Auto-oiled Aermotor after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting windmill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

New York Farm News

Norgord To Direct TB Eradication Work

C. P. NORGORD, formerly Commissioner of Agriculture of Wisconsin, since 1915, has been appointed as Deputy Commissioner of the Department of Farms and Markets. Mr. Norgord will be charged with the responsibility of carrying through New York's campaign to eliminate tuberculosis in dairy herds of the State according to Commissioner Pyrke, head of the Department of Farms and Markets. The appointment of Mr. Norgord follows the resignation of Deputy Commissioner George E. Hogue.

Commissioner Norgord is the originator of the area-test policy of disease control measures which was put into effect in Wisconsin in 1917. The first area work in the United States was started in Waukesha County, Wis. in October, 1917, but Barron County, in the same State was the first in the United States to complete its area test. (January, 1921).

In 1918 Commissioner Norgord arranged a cooperative agreement between the Federal Government and the State of Wisconsin. Since that time over 40 States in the Union have entered into cooperative arrangements with the Federal Department.

of year that the damage ordinarily inflicted by this kind of weather will not be fully felt, especially in the fruit district close to Lake Ontario, where all low temperatures are tempered.

The peach growers seem most concerned over the lack of new wood. Trees were so laden last year that little new wood was produced, and as it is in the yearling branches that the blossoms and fruit appear the outlook for fruit is by that much reduced. The older trees, those that received winter injury during the severe cold of 1917-18, cannot be expected to produce even an average crop. In some sections, notably in

Famous Holstein Cows

May Echo Sylvia—one of the most famous cows of the breed, has a record of 152 pounds of milk in one day, 1,005 pounds in 7 days, 4,196.9 pounds in 30 days, 8,220 pounds in 60 days, 11,855 pounds in 90 days and 12,898 pounds in 100 days. She is owned by A. C. Hardy of Brockville, Ontario

Monroe County, there is a smaller acreage of farm land planted to peaches than was the case a few years ago. Old orchards have been cut out and not enough young trees have been planted to make good the decrease. What young orchards there are, however, have a good chance to bear a good yield this season, as the lateness of the blooming season will act as a fair guarantee against harm by frost. It is possible that orchardists will have to contend with brown rot this season and orchard owners are being asked by the farm bureaus to watch for the disease.

IN NORTHERN NEW YORK

Franklin Co.—This has been the most backward spring Franklin County has known for many years. Most of the farmers were very late in getting in their spring grains, due to the fact that the ground was so wet. Corn and potatoes were planted very late. Cows went out to pasture rather early but dairymen continued to feed in the barn. A good many farmers had to buy hay this spring as fodder ran out before the stock went on pasture. Very little farm real estate has changed hands this spring, much less than usual. Farm prices of farm products are: hay \$18 a ton, butter 48 cents, oats 58 cents a bushel, wheat \$1.25, potatoes 75 cents, eggs 25 cents.—H. T. J.

Essex Co.—Essex county has a new Holstein champion. John M. Dewey, owner of Scenic Farms and one of the pioneer Holstein breeders of the county and present owner of one of the largest herds in northern New York, has recently made a record with one of his pure-bred Holsteins, Scenic Wellsland Korndyke 2nd. At the age of 5 years 11 months 21 days, she produced in 7 days 854 pounds milk. Four times during a 30 days' test, she made better than 30 pounds of butter in 7 days. In 30 days she produced 128 pounds butter and 3,404 pounds of milk. Her past test record was 127 pounds milk. This remarkable cow exceeds the milk production record of the former county champion by over 100 pounds milk in 7 days and over 7 pounds in one day.

I wish to say that the American Agriculturist is one fine farm paper, full of good, clean, sound reading.—W. H. Hall, Bath, N. Y.

AMONG THE NEW YORK FRUIT GROWERS

ALVAH H. PULVER

The experiment station men at Fredonia are much interested in a new variety of grape similar to the Concord. The plants have been under observation for some time, and last year the vines bore their first fruit. It is believed that the newcomer will prove a worthy variety. The parent vine was found near Westfield in a small vineyard. Its growth was so vigorous and its fruit compared so favorably with the ordinary Concord that the station authorities were called in for observation. Cuttings were set out in the Fredonia station grounds between rows of plants from the orig-

Famous Holstein Cows

Aaggie owned by Samuel Barber of Scottsburg, Livingston County, N. Y., a grade Holstein that produced last year 25,295 pounds of milk containing 1,129 pounds butterfat, a world's record for grade cows. Mr. Barber won the cup donated by the Livingston County Trust Company for having the highest producing cow in the Livonia Dairy Improvement Association. Mr. Barber's record is especially noteworthy as this is his first year in the association, and his herd averages 15,000 pounds per head

inal vine from Concord, Mass, on one side and the commercial sort on the other. Everything points to a most desirable new grape.

Look For Short Peach Crop

In Monroe County it is freely predicted that the large crop of peaches last year which drew so heavily on the energy of the trees, will work against any big showing for the present season, even if most favorable weather conditions ensue throughout the season. However, unseasonably cool weather has been a rather constant factor through much of the spring, three mornings in the first half of May showing a mercury registration of below 30 degrees, the coldest being 27. The orchards are so backward for this time

In the Public Service

THE first link in the New York Central Lines was the sixteen-mile pioneer road from Albany to Schenectady, opened in 1831.

The New York Central system now comprises 12,000 miles of lines serving eleven of the leading industrial and agricultural states of the Union.

These lines carry one-ninth of the rail-borne commerce of the country, including more than a million carloads a year of agricultural products.

They pay \$30,000,000 a year in taxes—four dollars in taxes for every three in dividends.

They are owned by 120,000 investors.

They are operated by 162,000 men and women, of whom 12,000 have been in the service more than 30 years.

New York Central Lines maintain high standards of public service, and are constantly striving to make this service the best in American rail-roading.

New Jersey Promises Good Fair Season

W. H. BULLOCK

NEW JERSEY promises to have a busy season of county and local fairs this year and reports of their secretaries show larger prize offerings and more classes in important livestock, fruit and vegetable departments. Following is a list of fair dates already decided upon for the current season:

Trenton Interstate Fair, Trenton, September 24-29.

Warren County Farmers' Picnic, Belvidere, August 15.

Gloucester County Pomona Grange Picnic, Pitman, August 15-17.

Flemington Fair, Flemington, August 21-25.

Atlantic County Fair, Egg Harbor, August 29-September 1.

Cape May County Fair, Cape May Court House, September 6-8.

Mount Holly Fair, Mount Holly, September 11-15.

Sussex County Fair, Branchville, September 18-21.

Garden State Fair, Greenwich, September 19-22.

Carney's Point Fair, Carney's Point, October 18-20.

County Board of Agriculture Meeting and Exhibit, Hackensack, December 13-15.

Some of the fairs are making special effort this year to prevent the spread of bovine tuberculosis. The extension authorities have urged the fair managers to keep untested cattle entered for exhibit in a separate place; also to give thorough disinfection of the premises where live-stock is housed. Issuing of certificates of the tubercular test within 60 days of the fair dates, by veterinarians approved by the State authorities, is urged before the cattle entered can be shown among those which have had the tubercular test.

Jersey Peaches a Week Late

New Jersey promises a good crop of peaches this year despite unfavorable weather during the spring, according to James E. Klahre, Manager of the Jersey Fruit Growers' Cooperative Association. However, he reports the New Jersey crop at least a week late. "Growers are spraying their orchards under a more effective system than formerly" he stated, following a recent survey in the New Jersey peach belt. "The New Jersey Extension Service has been cooperating with peach men throughout the State by giving telephone and mail advice on the proper time to fight the fruit pest and proper control methods to follow. The results of proper spraying are very apparent in the orchards of Burlington, Camden and Cumberland counties where 75 per cent of the New Jersey peaches are produced."

Fighting for Forest Protection

The fight for protection of New Jersey forests is gaining ground, following the very severe loss from forest fires this spring which definitely established a popular sentiment for the move. The New Jersey State Department of Conservation and Development has now created plans for the use of an appropriation, granted by the last legislation which gave funds for the employment of more wardens. Recent announcement by that department indicates the appointment of 29 sectional fire wardens which will be chosen under Civil Service examinations in early June.

Famous Holstein Cows

May Walker Ollie Homestead is the American champion butter producer, having a record of 1,523.23 pounds butter in a year. She is owned by the Minnesota Holstein Company of Austin, Minn.

The Improved Binder of Today Soon Pays for Itself By What It Saves

Every year the old binder falls off a bit more in efficiency. The owner hardly realizes the gradual decline. Finally comes a time when the risk is too great. Poor cutting, faulty binding, clogged elevators, heavy draft, delays, emergency repairs, lost bushels and loss of temper—these are incidents of the harvest with a worn-out binder.

In the meantime the new McCormick, Deering or Milwaukee binder goes into neighboring fields and surprises and pleases its owners in a hundred different details. If you haven't seen the perfected binder

of 1923 you can't realize what a vastly improved harvester it is. You will find it a marvel of skill and good workmanship, simpler, better made, easier to handle and ready for many years of good service.

Harvest is the critical time when all your plans and labors come to a head; go at it with trustworthy equipment. Will your binder stand the test this season? If any doubt is in your mind, invest in the crop-saving machine sold by your McCormick-Deering dealer. Look the binder over in detail at his store.

INTERNATIONAL HARVESTER COMPANY

606 SO. MICHIGAN AVE. OF AMERICA CHICAGO, ILL.
(INCORPORATED)

These are a few of the strong points in the construction of the present McCormick, Deering and Milwaukee Grain Binders:

Better construction • Improved bearings • Lighter draft
Outside reel support • Grain-saving floating elevator
Durable woven straps for canvases • Improved bundle carrier
Tongue truck for steadying and carrying loads

Safeguard the harvest by the use of strictly high-grade twine—McCormick, Deering, International—made now in the famous "Big Ball" winding in which 6 balls do the work of 10 of the old style. Balls are of the old size but have 66% more footage. Arrange for delivery before harvest time.

Easier than Whitewash

CARBOLA

The Disinfecting White Paint

It takes less than five minutes to mix the Carbola powder with water and have it ready to use as a white paint and powerful disinfectant. No waiting or straining; no clogging of sprayer. Does not spoil. Does not peel or flake. Disinfectant is right in the paint powder—one operation instead of two. Gives better results, costs less. Used for years by leading farms.

Your hardware, paint, seed or drug dealer has Carbola, or can get it. If not, order direct. Satisfaction, or money back. 10 lbs. (10 gals.) \$1.25 and postage; 20 lbs. (20 gals.) \$2.50 delivered; 50 lbs. (50 gals.) \$5.00 delivered; 200 lbs. (200 gals.) \$18.00 delivered; trial package and booklet 30c.

Killed 200 Rats New, Easy Way

Dog, Ferret and Traps Failed.
Amazing Virus Killed Them
All. Not a Poison.

"I was over-run with rats," writes H. O. Stenfort of Redford, Mich. "Seemed to be several hundred of them. Dog, Ferret and Traps failed. Tried Imperial Virus and was rid of them all in a short time. Have found rat skeletons, large and small, all over the farm."

Rats, Mice, Gophers, in fact all Rodents greedily eat Imperial Virus on bait. Sets up burning fever. Pests die outside, hunting for water. Harmless to humans, poultry, pets, stock, etc. Endorsed by Farm Bureau Experts and large, nationally known institutions everywhere. Economical to use. Large size trial bottle of this true virus for 50c or

You Can Get Yours Free

Rearing Vigorous Pullets

The Factor That Determines Winter Egg Yield

THE poultryman has changed the old saying of "Don't count your chickens before they are hatched" to "Don't count your pullets until they are in the laying house." But to go even farther, the poultrymen are realizing that the summer care of young stock is often the cause of the pullets going into a mid-winter molt. A pullet that is properly finished should have a large frame carrying a surplus of flesh when it is put into the laying house in the fall. This reserve of flesh may be likened to the spare parts of a machine, without which no car can run very far without being wrecked. A pullet in this condition can stand up under illumination in the winter and is far less apt to break down with disease. The size of the egg will increase more rapidly and will soon leave the classification of pullets' eggs. Such a bird has constitutional vigor which can only be obtained by proper management during the summer.

No Secret Systems

IN reviewing the successes enjoyed by many of our large breeders you will find that none of them have any particular secret system. Rather they observe several broad principals and combine common sense to tie them up to their particular conditions. The object of this article will be to cover points of interest concerning range management that have been proven on successful commercial plants.

In these days of high feed prices everyone knows the value of culling our hens strictly, but we are only just coming to realize that our culling should start with the young stock. This should be done at the time when they are shifted from the brooder to the range. They are usually from six to ten weeks of age, depending upon the season when they were hatched. They are easily picked out, but so many times they are left with the thought that they would catch up. While some of these birds do become less noticeable, nevertheless these are the birds that for some reason never do start to lay until spring when eggs are cheap.

If these birds were marked you would also find that they were the same birds that stopped laying in early summer. It certainly pays to put these under-sized, slow-developing pullets in with the birds that are to be sold as broilers. If they are not worth including in this lot, it is cheaper to kill them than to carry them at a continual loss. It is better to have fewer birds on range under the best conditions possible and in this way get pullets that are capable of making a uniform rate of growth. In poultry even more than in anything else it is the quality and not the quantity that pays.

From Brooder to Range

WHERE chicks are raised in brooders the problem of transferring them to unheated quarters is a very important one. When this takes place it depends on the time of year and the prevailing weather conditions. Under ordinary conditions the heat should be decreased gradually. From the third week on, the temperature is lowered so that when the sixth week comes little if any heat is needed. When a cold spell comes heat must be increased to prevent crowding and piling up. Chicks should be without heat in their brooders for a week before being transferred. Make the transfer on a bright warm day, preferably in the morning so that the birds may become accustomed to their new quarters before night.

The house in which the birds are placed must conform with several conditions if a vigorous growth is to be maintained. Perhaps the most important feature is to avoid overcrowding. When the birds are put out weighing a pound the house does not seem too full, but as their size doubles and trebles the house often becomes too crowded. Towards the end of the season 75 birds are enough for a six by eight-foot colony house. There should be plenty of perch room and every effort should be made to get them off the floor as soon as possible.

Summer time should be a vacation

By CRAIG SANFORD

time for the pullets. They should have every opportunity to enjoy the fresh air. Ventilation is more necessary in the case of poultry than other farm animals since a large amount of moisture is carried out by the breath. The arrangement of the house should be made with this in mind. Some breeders have the entire four sides of the upper part of the house in curtains. These are removed in the summer. The perches are started quite low and are gradually raised as the season advances. If the houses are faced towards the south they are automatically drying and disinfecting themselves throughout the day.

Since sunlight is the very cheapest disinfectant that we have, it certainly ought to be used. It is not necessary to have a deep litter in a colony house. There should, however, be enough to cover the floor. The remaining step in sanitation, is to paint the perches with a heavy coal tar product such as carbolineum. This should be done before the birds are placed in the house. This is a very effective remedy for red mites, a blood sucking insect that invade the birds at night and after filling themselves up with blood, retire into cracks around the perches.

We now come to the question of the range itself. There should be an abundance of green succulent food. It is not enough to give them the run of a packed ground that has some dried grass. Alfalfa or red clover make the best range cover but any orchard or pasture will be satisfactory. The range should be large enough to provide plenty of exercise. It is really surprising to compare the difference between two lots of birds, one of which has been on range ten days longer than the other. There is some element that they get that we have been unable to substitute when birds are not on the ground.

Water—An All Important Factor

WATER is an all important factor in chick growth during the summer. It should always be available and placed in the shade where it will keep cool. The birds also need some protection from the mid-day sun. If there is no natural shade from trees or bushes a few rows of field corn will serve the purpose.

Dry mash should be supplied in hoppers that will protect it from the weather. A good standard growing mash consists of 200 pounds wheat bran, 100 pounds each of corn meal, wheat middlings, heavy ground oats, and either meat scrap or some dried milk product.

Finally comes the finishing off of the pullets. It must be remembered that grain is fed to keep up the body weight and that mash is the feed that gives the eggs. A bird that does not keep up its body weight will go out of production until it has built up its weight again. For this reason pullets should not be pushed into production, but rather fed so that when they start laying they have a surplus of flesh that will help to carry them through the winter.

This is best done by cutting out the mash from the birds on range for five or six weeks prior to the time they are put in the laying house. This will build up their bodies and retard their sexual development. Grain is fed three times daily during this period giving them all they will clean up. Some breeders merely take all the high protein feeds out of the mash instead of taking the mash away entirely.

Keep the Birds Growing

DON'T let the birds stay out in the trees too late in the fall. At this time a cold snap often comes accompanied with dampness and the birds are brought into the houses with colds. If this happens all the benefit of proper management during the summer is lost and the birds never seem to entirely come around again until quite late in the year.

It is good to keep in mind a standard rate of growth and to check up on your birds as you go along to see if they

The Home of His Fathers

(Continued from page 486)

ambitious to develop an estate and to play at farming for some months in summer. The place seemed to him to be the one above all others for his purpose. He might raze the old house and avail himself of the noble setting of trees to lend dignity to the new home. Or perhaps it would be better to make it into a cottage for the superintendent while he built himself a great, pillared, far flung secluded mansion further back from the road. That wheat field and pasture could easily be converted into the most attractive golf course in that part of the State. In summer a swift motor could bring him down from his city offices in an hour and it would be fine to have his less fortunate friends down for week ends of country pleasures. It made a wonderfully pleasant dream and he thrilled a little when he thought of his beautiful wife and how her color would come and her eyes shine when he told her of his plans. It would be a bit of lover-like chivalry to present her with the deed. Yes, it was all settled—all but a few formalities.

Counted Chicks too Soon

So he walked briskly to the house with the pleasant feeling of satisfaction of one who is a bearer of pleasant tidings, found the owner busy with some farm task, greeted him pleasantly with assurance and said: "I have decided to buy this farm." The old man, a little mystified—not fully comprehending perhaps just what was meant, replied: "Thank you, but I do not care to sell." And again the stranger spoke—soothingly as one who talks to a well-meaning, unreasonable child. "Oh well, maybe you think you don't, but I am sure I can make it worth your while. There are plenty of other farms just as good. I am willing to pay you for the land and location and view. I don't think we will have any difficulty in getting together." And again the old man answered, this time with a new note in his voice: "But I have just told you that I couldn't think of such a thing. This farm is worth more to me than to anybody else."

Then the Man of Large Affairs who was not accustomed to be denied, began to be impatient that the farmer should be such a skin-flint and drive his advantage so hard and he said: "Well maybe you think so—but my time is money. I didn't come here to stand all day and match pennies and dicker over a thousand or two dollars, more or less. Set any price in reason—anything that seems right to you. My lawyer will take care of all details and make you no trouble. Just name a price. There will be a great deal to do here and I want to get started." Then the old man flamed into sudden anger and cried out in stern rebuke. "Sir, what do you mean? Can't I make you understand that neither you nor any other man has money enough to buy the land that my fathers cleared and the spot where they lie buried? Don't you know that I am going to die in that corner room there where I was born?"

A Philosophy He Could Not Fathom

So at last the great man understood and turned on his heel and muttered "Fool" and strode back to the car. He spoke a word to the waiting chauffeur who touched his cap in reply. Then the great, gleaming car leaped into pulsing life at the touch of the throttle and went sweeping swiftly on its arrogant way along the smooth ribbon curving between the pleasant fields. But the rider within saw not the sweet summer landscape that lay about him but sat questioning and debating and communing with himself concerning this strange Farmer-man whose ideals and viewpoint and philosophy he could never hope to understand.

So the story ends—almost before it begins. More and more as I have thought upon it, I have come to have a very great admiration for the old man who dwelt by the side of the lake.

Of one thing I am sure—that there is nothing more needed in our American farm life than a greater sense of the value of permanency. We ought to go about our work, not only as if we were farming a farm but also with the feeling that we are founding a dynasty.

As a matter of fact, every generation ought to stand on the shoulders of the generation gone before. If we are ever to develop a fine, gracious, cultured farm-type of civilization, we must also develop some reserve capital—modest wealth, if you will. When we shall come to have a more general farm tradition, that the boy shall take up the father's task just where he laid it down then we shall have a race of landowners and farmers which will represent the fine flower of American life.

Something is wrong—ideals are false—when we still have great numbers of farmers who farm, looking back and whose secret or open ambition is merely to make money enough to permit them to "retire and move to town." Very often the man who has thus realized his hope is a most pathetic figure. His old occupation is gone and there is nothing else to take its place. He has never learned the pleasures of study or the companionship of noble books and very often his days are long and empty.

Often I have read those sonorous chapters in the Book of Chronicles which sketch the outline story of the long, long dynasty of the Kings of Judah. You will remember there that one unvaried, selfsame phrase repeated again and again and again—repeated concerning almost every Hebrew King: "And he slept with his fathers and his son reigned in his stead." When we shall sleep with our fathers, as some day all of us must, God grant that there be not lacking, if not a son, then at least, one who loves us, to reign in our stead.

Holsteins—Why They Lead

(Continued from page 483)

milk. An interesting fact may be noted that a great many Guernsey and Jersey breeders retain a few Holstein cows as nurse cows for their calves because young calves cannot digest very rich milk. The milk from no other breed so closely resembles human milk as does that from the Holstein cow. Many leading physicians agree that Holstein milk is the best to feed infants that have to be raised on the bottle and for the growing children and sick people. Dr. E. V. McCollum of Johns Hopkins University, one of our foremost authorities on human nutrition, makes this statement: "Milk is our greatest protective food, and its use must be increased rather than diminished. No family has the right to purchase any meat until each member has at least a pint of milk daily. Milk is just as necessary for the maintenance of health in the adult as in the young." Dr. Rotch of Harvard University, a well known authority on pediatrics, says: "The Holstein-Friesian cow represents the most perfect milking animal known, having every characteristic of a cow suitable for an infant's milk supply."

Many individuals like good rich cream for cereals and dessert. However, this is a luxury and may be compared with any product which is used as a luxury. Milk having no more fat than does Holstein milk is much more digestible since the size of the fat globules permits much quicker and much more thorough emulsifying in the digestive tract. Holstein milk is more palatable over a long time since the fat in milk very often becomes offensive to a sick person who has to drink it because of their inability to digest more concentrated food.

The future of America in the form of our children is a vital factor and since the Holstein cow produces the one thing which is most essential to the development and growth of these children there is little doubt but that she is destined to develop and progress individually and as a breed. The other factor which is of as much importance in the future of the breed is that, for the average farmer under average conditions, there is more profit in the Holstein cow due to the fact that she is the greatest milk producer of the dairy breeds. I see no limit to the growth and development of the Holstein breed so long as we select carefully and breed intelligently.

Save Time—Get More Milk — Easy Terms

A De Laval Milker Will Pay for Itself While You Are Using It

If you are milking ten or more cows, you can't afford to be without a De Laval Milker. You can buy one on such easy terms that it will pay for itself by the time the last installment of the payment becomes due.

Figure what it will mean to do your milking in at least one-half the time you now do it. It may mean the saving of one or more men; it may mean extra hours in the field; it may mean that only one man need stop for milking, where all must help now; it may mean that the milking can be done by young boys or older men who are not able to milk many cows by hand now, yet who can handle a De Laval just as well as any one; it may mean that the women folks won't have to help with the milking, and it may mean that twice as many cows can be handled with the same help. Any one of these advantages alone may easily pay for a De Laval in a year's time—they have done so for many.

Consider also that the regular and stimulating, yet soothing, ac-

tion of the De Laval Milker usually increases milk production, and you have another reason for owning a De Laval. This increase varies, of course; but many De Laval owners state that it has increased their yield of milk ten per cent, and a few who have kept careful records have said it has increased their production as high as twenty per cent, with the same cows and care. The extra milk thus obtained by many De Laval owners has helped materially in paying for their milker.

Add to this the fact that it is possible to produce a higher quality of milk, which often commands more money, and you have another reason for owning a De Laval.

Why not join the army of satisfied De Laval Milker users—there are now over 10,000 in use—especially when you can buy a De Laval on such easy terms that it will pay for itself? See your De Laval Agent or write for full information.

Hardiness!

Every man who milks cows for a living knows that Hardiness is a necessary characteristic of a good dairy cow.

HARDINESS IN HOLSTEINS MEANS —

The ability to do well for the general farmer, as well as for the commercial dairyman.

The ability to readily adapt themselves to any climate and to profitably turn available farm feed into milk and butter-fat.

The ability to reproduce regularly -- without special care or attention -- making possible more rapid herd increase.

Don't Throw Money Away

Financial, Investment and Service Items

Financial Department:—I would like to have information concerning the Eugenia Oil and Gas Company of which they are selling stocks in this section for \$100?—J. L. H., Pennsylvania.

This particular stock is quoted 10 cents bid and 20 cents asked. That may give you a line on what the market thinks. We think it is a reckless throwing away of money to buy shares in this or any other oil promotion.

Financial Department:—Would you kindly investigate the Isoline Coal Company and let me know what to do? I invested \$600 in the Minnesota Coal Company. (Letter attached) —A. H., Pennsylvania.

We think you would do well to charge your \$600 to experience rather than to put any more money into a speculative venture of this kind.

BUY SOMETHING THAT HAS A MARKET

Financial Department:—The Home Correspondence School of Springfield, Mass. are selling a new issue 7 per cent sinking fund preferred stock at \$25 a share. Are they good and safe investment to turn called Victory Loan bonds into, or would Pennsylvania R. R. selling at 47 be safer? Also kindly tell me what you think of the Eugene Christian Vitamin Food Company 8 per cent cumulative preferred stock, and the Parry Oil Company stock of Texas at \$1.50 per share?—G. K. W., Pennsylvania.

Probably the Pennsylvania stock is the best of the investments you name, but even that is not suitable as a substitute for a Victory loan. Certainly our earnest advice is to avoid all oil stocks. At the best they are gambles and at the worst plain swindles. Also it is impossible to appraise preferred stock of a correspondence school or a food company without an analysis of earnings over a period of years which are not available to us. It is our opinion that your best course would be to reinvest in another Government bond. Assuming you will not take this advice because it is too conservative, we can recommend as a sound investment the preferred stock of the Jones & Laughlin Steel Company, which sells about 107%, pays \$7 a year in dividends and so yields about 6.4 per cent. There is a good market for this stock, so that if at any time you need to use your money you can always get it. Except for the Pennsylvania issue that is true of none of the stocks you speak of.

Financial Department:—As a policy holder of the Continental Life Insurance Company of Wilmington, Delaware. I have the option on fifteen shares of their capital stock at \$20 per share. The company claims an actual book value of \$24 per share for the stock at the present time. Do you consider the purchase of these shares of stock a safe investment?—G. J. K., Maryland.

Undoubtedly stock in the Continental Life Insurance has investment merit, but there is not a particularly good market for it. Recent quotations were \$19 bid, offered at \$22. The par value is \$10. Dividends last year were at the rate of 12 per cent with 5 per cent extra or expressed in dollars, \$1.75. This is about 6 per cent on your investment if you paid \$20 per share.

SELLING A PATENT BY MAIL

"The first principle of successful selling by mail is a thorough knowledge of the product on the part of the sales correspondent. And so the best person to sell a new idea is the inventor who knows all about the good features of the invention," advises the Business Consultation Bureau of La Salle Extension University. In the words of a well-known patent attorney, "To set forth properly an invention to a manufacturer or a purchaser, it is essential to show:

1. Its advantages over well-known devices in the art to which it appertains.
2. Its cost, based if possible upon experience or taken from quotations given by reasonable parties for its production by the dozen, hundred, gross, or thousand, as the case may be.
3. The profits to manufacturers, wholesalers, and retailers.
4. The market to be supplied. This is determined in accordance with the nature of the invention, whether it is an invention useful to both sexes or to children alone."

The next step is to prepare a list of

manufacturers and men interested in the industry within the scope of which the invention falls, and send these people a preliminary letter, to be followed by correspondence in accordance with the interest evoked.

A SMALL MATTER ADJUSTED

One subscriber wrote "thank you for attending to so small a matter," but we replied that no matter was too small to deserve our attention. After all, one dollar is sometimes as hard to get back as a hundred—but it is just as annoying to lose a small amount as a large one.

This time it was a mail-order house which had tangled its affairs badly. A refund check was sent—and the bank returned it as worthless. For a while it seemed as though there could be no redress for Mr. H. C. W. of New York, whose claim it was that we were handling. However, we found that another firm had taken over the liabilities of the defunct concern, and upon returning the old check, we received a money order for \$3.95 in full settlement.

"I shall be glad to say all the good things I can for the Service Bureau" wrote Mr. W. in acknowledging the money.

REASONABLY GOOD

Financial Department:—Would you kindly state financial soundness of the Farmers Fund, Inc. of Rochester, N. Y. Is it a safe venture to loan them a few hundred dollars of a farmers hard earned dollars? They pay 5 per cent.—A. H. W., Binghamton, N. Y.

We think this is a good investment for a farmer.

Financial Department:—Can you tell me if the bonds of the North American Edison are a safe investment? Also can you tell me where the company is located?—Mrs. D. W. H., New York.

North American Edison 6 per cent bonds due 1952 are reasonably good investments. They are secured by deposit of stock of the Cleveland Electric Illuminating Company, and of the Union Electric Light & Power Company of St. Louis. We see no reason why you should not buy them.

ONLY FOR THE MAN WHO CAN RISK

Financial Department:—Would you advise me if the General Mortgage Financing Corporation is a safe investment?—(C. S. S., New York.

We do not recommend stock in any finance corporation for investors unable to take risks.

CLERKS ARE SOMETIMES CARELESS

One of the smaller mail-order houses had difficulty with their shipping department, and as a result a returned package was not credited by the receiving clerk. Mrs. M. A. T. of New York, who reported the case to us, was anxious to get her money back, and could seem to get no satisfaction from the firm. However, when the Service Bureau called the attention of the manager to the difficulty, a check for \$3.79 in full payment was immediately forthcoming.

"CANADIAN AND AMERICAN OIL" DEAD

Financial Department:—Can you inform me about the Canadian and American Oil Company of Buffalo, N. Y.—(G. D. R., New York.

As far as we have been able to ascertain this oil company has been dead for four or five years.

RAILROAD HAS RIGHT

Many years ago a railroad was sold the right to cross a person's land. The railroad is not now in use. Can the owner of the adjoining land build a fence across the railroad to keep his cattle from going through as the railroad does not maintain fences along the side of it?—(A. L. I., New York.

Even though the railroad is not being used, the adjoining owners have no right to build a fence across it. By filing a petition in the usual manner adjoining owners may be able to compel the railroad to build and maintain a fence along the side of its road.

You'll Profit By Our Chicks

MOSS'S CHICKS

BEST IN THE WORLD

This season has proven to be the biggest season in our history. An outstanding factor is the great number of reorders from customers of past years, which speaks most convincingly of our High Quality and Superior Service.

The Brown Mouse—By Herbert Quick

CON BONNER, who came to see the opening, voiced the sentiments of the older people when he condemned the school as disorderly. To be sure, there were more pupils enrolled than had ever entered on a first day in the whole history of the school, and it was hard to accommodate them all. But the director's criticism was leveled against the free-and-easy air of the children. Most of them had brought seed corn and a good-sized corn show was on view. There was much argument as to the merits of the various entries. Instead of a language lesson from the text-book, Jim had given them an exercise based on an examination of the ears of corn.

The number exercises of the little chaps had been worked out with ears and kernels of corn. One class in arithmetic calculated the percentage of inferior kernels at tip and butt to the full-sized grains in the middle of the ear.

All the time, Jim Irwin, awkward and uncouth, clad in his none-too-good Sunday suit and trying to hide the fact that he was pretty badly frightened, passed among them, getting them enrolled, setting them to work, wasting much time and laboring like a heavilyladen barge in a seaway.

"That feller'll never do," said Bonner to Bronson next day. "Looks like a tramp in the schoolroom."

"Wearin' his best, I guess," said Bronson.

"Half the kids call him 'Jim,'" said Bonner.

"That's all right with me," replied Bronson.

"The room was as noisy as a caucus," was Bonner's next indictment, "and the flure was all over corn like a hog-pin."

"Oh! I don't suppose he can get away with it," assented Bronson disgustedly, "but that boy of mine is as tickled as a colt with the whole thing. Says he's goin' reg'lar this winter."

"That's because Jim don't keep no order," said Bonner. "He lets Newt do as he dam pleases."

"First time he's ever pleased to do anything but devilry," protested Bronson. "Oh, I suppose Jim'll fall down, and we'll have to fire him—but I wish we could git a good teacher that would git hold of Newt the way he seems to!"

CHAPTER V

THE PROMOTION OF JENNIE

IF Jennie Woodruff was the cause of Jim Irwin's sudden irruption into the educational field by her scoffing "Humph!" at the idea of a farm-hand's ever being able to marry, she also gave him the opportunity to knock down the driver of the big motor-car, and perceptibly elevate himself in the opinion of the neighborhood.

The fat man who had said "Cut it out" to his driver, was Mr. Charles Dilly, a business man in the village at the extreme opposite corner of the county. His choice of the Woodruff District as a place for motoring had a secret explanation. He came to see Colonel Woodruff and Jennie. Mr. Dilly was a candidate for county treasurer, and wished to be nominated at the approaching county convention. In his part of the county lived the county superintendent—a candidate for re-nomination. He was just a plain garden or field county superintendent of schools, no better and no worse than the general political run of them, but he had local pride enlisted in his cause, and was a good politician.

Mr. Dilly was in the Woodruff District to build a backfire. He expected to use Jennie Woodruff to light it withal. That is, while denying that he wished to make any deal or trade—every candidate in every convention always says that—he wished to say to Miss Woodruff and her father, that if Miss Woodruff would permit her name to be used for the office of county superintendent of schools, a goodly group of delegates would be glad to reciprocate any favors Mr. Charles J. Dilly might receive in the way of votes for county treasurer with ballots for Miss Jennie Woodruff for superintendent of schools.

Mr. Dilly never inquired as to Miss Woodruff's abilities as an educator. That would have been eccentric. Miss Woodruff never asked herself if she knew anything about rural education which especially fitted her for the task; for was she not a popular and successful teacher—and was not that enough? Mr. Dilly merely asked himself if Miss Woodruff's name could command strength enough to eliminate the embarrassing candidate in his part of the county and leave the field to himself. Miss Woodruff asked herself whether the work would not give her a pleasanter life than did teaching, a better salary, and more chances to settle herself in life. So are the officials chosen

who supervise and control the education of the farm children of America.

This secret mission to effect a political trade accounted for Mr. Dilly's desire that his driver should "cut out" the controversy with Newton Bronson, and the personal encounter with Jim Irwin—and it may account for Jim's easy victory in his first and only physical encounter. An office seeker could scarcely afford to let his friend or employee lick a member of a farmers' road gang. It certainly explains the fact that when Jim Irwin started home from putting out his team the day after his first call on the Simms family, Jennie was waiting at the gate to be congratulated on her nomination.

"I congratulate you," said Jim.

"Thanks," said Jennie, extending her hand.

"I hope you're elected," Jim went on, holding the hand; "but there's no doubt of that."

"They say not," replied Jennie; "but father says I must go about and let the people see me. He believes in working just as if we didn't have a big majority for the ticket."

"A woman has an advantage of a man in such a contest," said Jim; "she can work just as hard as he can, and at the same time profit by the fact that it's supposed she can't."

"I need all the advantage I possess," said Jennie, "and all the votes. Say a word for me when on your pastoral rounds."

"All right," said Jim, "what shall I say you'll do for the schools?"

"Why," said Jennie, rather perplexed, "I'll be fair in my examinations of teachers, try to keep the unfit teachers out of the schools, visit schools as often as I can, and—why, what does any good superintendent do?"

"I never heard of a good county superintendent," said Jim.

"Never heard of one—why, Jim Irwin!"

"I DON'T believe there is any such thing," persisted Jim, "and if you do no more than you say, you'll be off the same piece as the rest. Your system won't give us any better schools than we have—of the old sort—and we need a new kind."

"Oh, Jim, Jim! Dreaming as of yore! Why can't you be practical! What do you mean by a new kind of rural school?"

"A truly-rural rural school," said Jim.

"I can't pronounce it," smiled Jennie, "to say nothing of understanding it. What would your tralalooral rural school do?"

"It would be correlated with rural life," said Jim.

"How?"

"It would get education out of the things the farmers and farmers' wives are interested in as a part of their lives."

"What, for instance?"

"Dairying, for instance, in this district; and soil management; and corn-growing; and farm manual training for boys; and sewing, cooking and house-keeping for the girls—and caring for babies!"

Jennie looked serious, after smothering a laugh.

"Jim," said she, "you're going to have a hard enough time to succeed in the Woodruff school, if you confine yourself to methods that have been tested, and found good."

"But the old methods," urged Jim, "have been tested and found bad. Shall I keep to them?"

"They have made the American

people what they are," said Jennie. "Don't be unpatriotic, Jim."

"They have educated our farm children for the cities," said Jim. "This county is losing population—and it's the best county in the world."

"Pessimism never wins," said Jennie.

"Neither does blindness," answered Jim. "It is losing the farms their dwellers, and swelling the cities with a proletariat."

For some time, now, Jim had ceased to hold Jennie's hand; and their sweetheart days had never seemed farther away.

"Jim," said Jennie, "I may be elected to a position in which I shall be obliged to pass on your acts as teacher—in an official way, I mean. I hope they will be justifiable."

Jim smiled his slowest and saddest smile.

"If they're not, I'll not ask you to condone them," said he. "But first, they must be justifiable to me, Jennie."

"Good night," said Jennie curtly, and left him.

JENNIE, I am obliged to admit, gave scant attention to the new career upon which her old sweetheart seemed to be entering. She was in politics, and was playing the game as became the daughter of a local politician. The reader must not by this term get the impression that Colonel Woodruff was a man of the grafting tricky sort of which we are prone to think when the term is used. The West has been ruled by just such men as he, and the West has done rather well, all things considered. Colonel Albert Woodruff went south with the army as a corporal in 1861, and came back a lieutenant. His title of colonel was conferred by appointment as a member of the staff of the governor, long years ago, when he was county auditor. He was not a rich man, but a well-to-do farmer, whose wife did her own work much of the time, not because the colonel could not afford to hire "help," but for the reason that "hired girls" were hard to get.

The colonel, having seen the triumph of his side in the great war, was inclined to think that all reform had ceased, and was a political standpatter—a very honest and sincere one. Moreover, he was influential enough so that when Mr. Cummins or Mr. Doliver came into the county on political errands, Colonel Woodruff had always been called into conference. He was of the old New England type, believed very much in heredity, very much in the theory that whatever is is right, in so far as it has secured money or power.

He believed in education, provided it did not unsettle things. He had a good deal of Latin and some Greek, and lived on a farm rather than in a fine house in the county seat because of his lack of financial ability. As a matter of fact, he had been too strictly scrupulous to do the things—such as dealing in lands belonging to eastern speculators who were not advised as to their values, speculating in county warrants, buying up tax titles with county money, and the like—by which his fellow-politicians who held office in the early years of the county had founded their fortunes. A very respectable honest, American tory was the colonel, fond of his political sway, and rather soured by the fact that it was passing from him.

Such being her family history, Jennie was something of a politician herself. She was in no way surprised when approached by party managers on the subject of accepting the nomination for county superintendent of schools. Colonel Woodruff could deliver some delegates to his daughter, though he rather shied at the proposal at first, but on thinking it over, warmed somewhat to the notion of having a Woodruff on the county pay-roll once more.

CHAPTER VI

JIM TALKS THE WEATHER COLD

"GOING to the rally, James?"

Jim yearned for a long evening in his attic den with his cheap literature. But as the district schoolmaster he felt some sense of duty as to exhibiting an interest in public affairs.

"I guess I'll have to go, mother," he replied regretfully. "I want to see Mr. Woodruff about borrowing his Babcock milk tester, and I'll go that way. I guess I'll go on to the meeting."

His mother urged his overcoat upon him in vain—for Jim's overcoat was distinctly a bad one, while his best suit, now worn every day as a concession to his scholastic position, still looked passably well after several weeks of school-room duty. It seemed more logical to assume that the weather was milder than it really was, on that sharp October evening, and appear at his best, albeit rather aware of the cold. Jennie was at home, and he was likely to see and be seen of her.

"You can borrow that tester," said the colonel, "and the cows that go with it, if you can use 'em. They ain't earning their keep here. But how does the milk tester fit into the curriculum of the school? A decoration?"

"We want to make a few tests of the cows in the neighborhood," answered Jim. "Just another of my fool notions."

"All right," said the colonel. "Take it along. Going to the speakin'?"

"Certainly, he's going," said Jennie, entering. "This is my meeting, Jim."

"Surely, I'm going," assented Jim. "And I think I'll run along."

"I wish we had room for you in the car," said the colonel. "But I'm going around by Bronson's to pick up the speaker, and I'll have a chuck-up load."

"Not so much of a load as you think," said Jennie. "I'm going with Jim. The walk will do me good."

ANY candidate warms to her voting population just before election; but Jennie had a special kindness for Jim. He was no longer a farm-hand. The fact that he was coming to be a center of disturbance in the district, and that she quite failed to understand how his eccentric behavior could be harmonized with those principles of teaching which she had imbibed at the State normal school in itself lifted him nearer to equality with her. A public nuisance is really more respectable than a non-entity.

She gave Jim a thrill as she passed through the gate that he opened for her. White moonlight on her white furs suggested purity, exaltation, the essence of womanhood—things far finer in the woman of twenty-seven than the glamour thrown over him by the school-girl of sixteen.

Jim gave her no thrill; for he looked gaunt and angular in his skimpy, ready-made suit, too short in legs and sleeves, and too thin for the season. Yet, as

WHAT HAS HAPPENED?

WHEN Jennie Woodruff said "Humph!" Jim Irwin decided that he would be something besides her father's field hand after all. He had often expressed his opinion of what a rural school should be, and through a fluke is elected to the vacant position of school-teacher and must make good his theories.

Among Jim's loyal adherents is 17-year old Newton Bronson, whose truancy and pool-playing are making him a local problem. Jim fights for Newton in a roadside argument and as a result Mr. Bronson nominates him for the position.

they walked along, Jim grew upon her. He strode on with immense strides, made slow to accommodate her shorter steps, and embarrassing her by his entire absence of effort to keep step. For all that, he lifted his face to the stars, and he kept silence, save for certain fragments of his thoughts, in dropping which he assumed that she, like himself, was filled with the grandeur of the sparkling sky, its vast moon, plowing like an astronomical liner through the cloudlets of a wool-pack.

They stopped and looked. Jim laid his hard hands on the shoulders of her white fur collar.

"What's the use of political meet-

A Bureau Not Used for Storing Clothes

Another Talk About Women and Their Business

By A MERE MAN

WELL I got away with it! I wrote an article for American Agriculturist in the April 14th issue in which I made some rather emphatic statements about women and the American home. I am still alive, which is probably due to the fact that I did not sign my name to the article. If you did not read it, look up your April 14th issue and read the article on the second page entitled, "Is the American Home Slipping?" and you will understand the risk that I took. I understand from the editor of American Agriculturist that his household editor has been going around with a gun looking for me ever since, but although I am only a mere man, I am a brave one at that, so I am now taking both my life and my pen in hand to talk about the women some more.

The truth that I tried to bring out in the first article is that something is needed to dignify homemaking the world's most important profession. I believe that the women themselves have started a movement to add such dignity to homemaking, and that movement is known as the home bureau. I am sorry to say that although the home bureau has been active in doing a great work now for a number of years, there are thousands of women who do not know what it is. They are in much the same situation as was the farmer whom a county farm bureau man visited some years ago when the farm bureau was new. After visiting with the farmer a few moments the farm bureau manager asked him if he ever used the farm bureau. The farmer shifted his tobacco to the other side of his mouth, and said that he would never have one of those darned new fan'-dangled machines on his farm!

I don't know just how the women themselves define the home bureau, but I would say it is an organized movement of women to help themselves improve and dignify homemaking, the greatest and most important profession in the world.

There is grave need for such a movement. Once, making the home was the only trade of women; now it is only one out of hundreds of trades or professions in which women engage, and in the minds of a large number of young women, it ranks least in importance. I think that too many modern women think of homemaking as a task of drudgery in-

volving only the washing of dishes, scrubbing of floors, and the cooking of food for mere man to eat.

I am not one of the many narrow-minded male specimens, however, who are constantly harping on the scheme that woman's only place is in the home. A lot more of them would gladly be there if there were more young men of gumption and courage enough to be willing to support a home and to offer a nice girl the partnership job in establishing this fundamental unit of society. But as long as the men hold off from marriage, thousands of girls must live, and to live many of them must work at business trades and professions. As a result, we fear that thousands of our women have come to regard homemaking as old-fashioned, and unworthy of consideration as a real life work. If a majority of women reach such a conclusion and keep it permanently, then indeed is our house of civilization built upon the sands and the winds of adversity will surely destroy us, for it goes almost without saying that successful homes are absolutely necessary to any nation and to any civilization. So this is where the home bureaus come in—to bring back to women, knowledge and confidence in their biggest job.

The home bureau organization is similar to that of the farm bureau. A woman agent, usually called a home demonstration agent, is established in the county. She is required to have a long course of training in the many diverse matters that touch the home. The home bureau in the county is financed by national and state funds administered through the state colleges of agriculture, by local funds appropriated by the county and by some subscriptions of the women members who belong to the local organization.

State colleges, through their home economics, schools or departments, largely direct the work of the home bureau agent, but she is also much influenced by the advice and counsel of the women of her county, organized in the county association.

The home bureau county associations are organized with an executive committee, president and secretary. The county associations are federated in many States into State home bureau federations and now

the American Farm Bureau Federation has made arrangements to bring all of these State home bureau federations together nationally as a part of the American Farm Bureau.

In New York State the college end of the home bureau work is directed by Miss Martha Van Rensselaer and Miss Flora Rose, heads of the home economics department of the New York State College of Agriculture, who are assisted by able assistant State leaders of home demonstration agents. Miss Van Rensselaer has done such notable work that she was recently chosen by a committee of the National League of Women Voters as one of the twelve most famous women in the United States. Miss Rose is equally well known; and Mrs. A. E. Brigden, president of the State Federation, has been a power for good in placing the organized women back of movements for the improvement of country life and homes.

New York State has a home bureau in each of 34 counties and in 3 cities, with an active membership of more than 30,000 women in over 900 communities. Eleven specialists in nutrition, foods, clothing, home management, home hygiene and household furnishings are engaged in active work with home demonstration agents and the county home bureaus in carrying on projects and home demonstrations in different phases of these subjects.

For example, the nutrition work aims to assist the homemaker in planning three well-balanced meals a day with the special object of promoting vigorous growth and development of children. These projects show how such common ailments as underweight, overweight, indigestion, headaches and colds may be relieved through proper diet. They also aim to establish good food habits and other health practices among children, through cooperation with the schools.

Of course there are women who will say, "I don't need any of these new notions to tell me how to boil water without burning it." There may be those who do not need to talk over and study their business, but I would just as soon be excused from eating regularly at the table of women who think they are so good that there is nothing more to be learned.

A Home Bureau Committee Meeting

More and more women are finding problems of home and community worthy of organized thought and action

A Page For the Cook, Be She Expert or Beginner

Sugarless Canning—Simple Recipes For Different Meals—Kate Sweetser on "Making Friends"

STRAWBERRIES, late this year because of the prolonged cool weather, are due to "glut the market," according to authorities who watch the picking and shipping all over the country. Whether you raise your berries or buy them, early June should find them plentiful—almost too plentiful in fact.

Put them up! Don't lose the opportunity, for this berry is especially delicious when preserved.

Sugar? Yes it's high—but here's a tip. Can the berries in their own juice and add the sugar when they are opened. By that time the new crop will be along, and prices will be lower. During the war, the government recommended sugarless canning and this seems a good time to revive it.

Minna C. Denton, who tried out many delightful combinations in the Home Economics Experiment Kitchen, has given us the following directions for canning not only strawberries but other fruits as they come along.

Expert Advice on Sugarless Canning

Apples, somewhat under ripe, gooseberries, blueberries, raspberries, and other berries, and sweet varieties of plums and cherries may be canned in their own juices. In fact, the flavor of many of these products, sweetened just before using, is even finer and more like that of the fresh fruit, than when they are canned with large quantities of sugar or in a heavy syrup. Any of the following ways may be used:

Method A.—This is an easy and simple method, especially when handling soft, juicy fruit, such as berries. Pack the washed fruit into the jar as usual, and without adding liquid of any kind. Process for the usual period, or perhaps 4 or 5 minutes longer. The juice will cook out of the fruit during the processing period, and the flavor will be richer than if water or even syrup be added.

Method B.—Select the ripest of the fruits, clean and trim as usual, cook slowly with no water added, or at least with very little. When the fruit goes to pieces, drain the juice through a jelly bag; bring this juice to the boil; and use it instead of boiling syrup to fill the jars in which the firmer fruit is packed. Then process the jars as in Method A. If desired, the dripped juice may be concentrated to make it richer.

Method C.—Prepare fruit as usual, and without adding any sugar, cook it in an ordinary pan or kettle, to a sauce of the consistency desired for table use. Have ready jars, lids and rubbers, covered with boiling water. Remove each jar as needed; pour in the boiling sauce and seal at once. Do not wipe or touch the inside of the jar or lid.

This method is not so uniformly successful as is Method A, because it is difficult to prevent bacteria and molds from getting into the fruit and the jars while they are being filled and sealed. Many housewives, however, can acid fruits successfully this way.

Some fruits canned without sugar absorb the sweetening more thoroughly and evenly if reheated when the sweetening is added. This is especially true of very sour fruits, or those in large pieces.

Using Syrup Instead of Sugar

Honey, maple syrup, corn sugar, molasses, malt syrup or other syrups sold under various trade names, may be substituted for part or all of the granulated sugar ordinarily used in canning. None of these sweeteners will give exactly the same results as does granulated sugar; on the other hand, some of them may prove quite acceptable.

When using a sweetening agent which you have never before tried, begin by substituting only enough to replace half of the sugar generally used. That is, use $\frac{1}{2}$ cup of granulated sugar and $\frac{1}{2}$ cup of other sweetener for each cup of granulated sugar called for by the original recipe.

NOVEL RECIPES FOR RHUBARB

When fresh rhubarb comes around, every member of the family rejoices. "Just plain rhubarb" becomes a rare

delicacy. Mrs. E. A. Edelblute gives a recipe for rhubarb pie which is a little out of the ordinary, and Mrs. Carmen D. Welch sends us the other rhubarb recipes, which we pass on with hearty recommendation that our readers try them.

Rhubarb Custard Pie

One cup scalded rhubarb; 1 cup sugar; 1 egg; 1 tablespoon flour; 5 tablespoons water. Flavor with lemon, cook until thick and pour into a baked crust. Cover with meringue.

Rhubarb Cobbler

Cut the rhubarb without peeling, into small lengths; and place in a baking dish; sugar it well; and pour over it a batter made of 1 cup full sour milk, a little water in which you have dissolved a half teaspoonful soda, with enough flour to make a batter of medium thickness. Bake 30 minutes, and serve cold with sugar and cream.

Rhubarb Jam

Slice six lemons in thin slices and cut up six pounds rhubarb in small lengths. Put the lemon and rhubarb in a bowl, and cover with 6 cups sugar. Let it stand overnight, then add 1-3 cup water, and boil 1 hour without stirring. When it is quite thick, pour into jelly glasses and seal when cool.

Rhubarb Marmalade

Cut 2 pounds rhubarb in small pieces and add 1 cup boiling water, to which $\frac{1}{2}$ pound of nut meats have been added. Cook the above mixture till soft, then add 2 cups sugar and 2 lemons cut in thin slices. Cook till the syrup thickens then remove from fire and pour into jelly glasses.

SPRING SALADS ARE IN ORDER

From Mrs. E. A. Edelblute, come several recipes that are particularly appetizing at this time of the year.

Fruit Salad

Equal parts of diced apples, sliced oranges and bananas, and 1 cup nut meats. Prepare one package of lemon

jello according to directions and add a little more sugar. When cooled, combine with the fruit mixture. Serve with whipped cream.

Spring Salad

Slice young onions and radishes. Shred a quantity of lettuce. Make a dressing consisting of one egg; $\frac{1}{2}$ cup cream; 3 tablespoons vinegar (if vinegar is very strong, dilute it) salt to taste and sugar if you prefer it. Let cook until mixture coats the spoon. Cool and mix with vegetables.

Spring brings with it an abundance of dandelions, mustard, horseradish, dock, etc., which may be used in cooking thus providing us with delicious and nourishing food. In the days gone by, I disliked the lowly greens but my sister-in-law told me how she cooked them. They are fine and I want to pass the recipe on.

Greens

Pick, assort, and thoroughly wash the greens. Put them into a kettle and scald, pouring off the first water. Put them on again and cook in salt water until tender. Scald $\frac{1}{2}$ cup vinegar weakened and sweetened to taste, to which a tablespoon of meat drippings has been added. Pour over the greens boiling hot and over all, slice a hard boiled egg.

CAN YOU MAKE SALAD WITH SCISSORS?

MABEL FERN MITCHELL

How many of us realize the value of a pair of scissors kept in the kitchen? Often we have an old rusty pair, one point broken off, dull as a hoe, but I mean a nice clean pair, the cutting-clear-to-the-point kind. If you do not have an extra pair of this kind, I certainly advise you to get one. I bought a pair with some extra egg money and one of the first things I did with the scissors was to cut up a chicken I wanted to fricassee. The chicken was so easily unjointed, and I cut right through the back. As a result I'll never use a knife again.

Did you ever shred your lettuce with

the scissors? Do this just before you serve the lettuce so the juice will not run out. It will make an excellent garnish or foundation for salads. All farmers' wives make Dutch or Cottage Cheese. Next time make some into balls, and place on the shredded lettuce leaves. Try cutting carrots into various shapes, with the scissors, and serve with French dressing, made in the proportions of one tablespoon vinegar, thoroughly blended with three tablespoons of olive oil, and seasoned to taste with salt, pepper and onion juice.

One of the prettiest salads ever served was of red and green peppers cut in shapes of holly leaves and berries with the scissors. Serve with mayonnaise.

If one is skilled in the use of scissors, one can cut cakes into various shapes for parties. Use the scissors to cut citron, raisins, etc., for cakes and salads. Very thin sandwiches also may be cut into fancy shapes with scissors. Cut marshmallows for salad or cake frosting with scissors.

Make some old fashioned molasses candy next winter, and use the scissors to cut into pieces of various shapes. Like all other tools in use, they must be kept sharp and need to have keen, straight edges, close meeting points. Put them away clean each time.

A NEW FRIEND FOR A. A. READERS

Kate Sweetser, whose first contribution to the American Agriculturist appears on this page, is well known not only as a writer of charming fiction, but as one who understands girls and has helped hundreds with their problems. Perhaps you will find in her advice on friendship some clue to the secret of her popularity with girls who know her personally as well as those who know her only through the written page.

A USEFUL DEVICE

Another handy little device is the potato ricer. Aside from making mashed potatoes so much nicer for the table it makes them smoother for bread making. It also mashes vegetables for cream soups, pumpkin and sweet potatoes, for pies, and last but not least makes vegetables smooth and fine for baby.—(D. W., Maryland.)

The Brown Mouse

(Continued from page 494)

ings," said Jim, "when you and I can stand here and think our way out, even beyond the limits of our Universe?"

"A wonderful journey," said she, not quite understanding his mood, but very respectful to it.

"And together," said Jim. "I'd like to go on a long, long journey with you to-night, Jennie, to make up for the years since we went anywhere together."

"And we shouldn't have come together to-night," said Jennie getting back to earth, "if I hadn't exercised my leap-year privilege."

She slipped her arm in his, and they went on in a rather intimate way.

"I'm not to blame, Jennie," said he. "You know that at any time I'd have given anything—anything—"

"And even now," said Jennie, taking advantage of his depleted stock of words, "while we roam beyond the Milky Way, we aren't getting any votes for me for county superintendent."

Jim said nothing. He was quite, quite reestablished on the earth.

"Don't you want me to be elected, Jim?"

Jim seemed to ponder this for some time—a period of taking the matter under advisement which caused Jennie to drop his arm and busy herself with her skirts.

"Yes," said Jim, at last; "of course I do."

Nothing more was said until they reached the schoolhouse door.

"Well," said Jennie rather indignantly, "I'm glad there are plenty of voters who are more enthusiastic about me than you seem to be!"

(Continued next week)

FRIENDS—HOW TO MAKE AND KEEP THEM.

KATE DICKINSON SWEETSER

MONEY can buy an automobile, a string of pearls, a fur coat, a house and lot, but there is one thing it cannot buy, and that is a friend. There is only one way to get friends, and that is a very old and a very simple way—by being friendly.

Sitting at home alone and wishing for them never gave them to anybody. Feeling a little bit superior to one's companions and showing it, doesn't add to one's chances of making them, nor does avoiding Jeanette because you don't like her manner, or Elsie because she is so silly with the boys, or crossing the street for fear of having to walk downtown with garrulous Mrs. Brown or dull Miss Jones, or avoiding George Smith for fear he will tell you again about that wonderful trip to Niagara he once took. If you do these things and then complain about being left alone, and say enviously of Mary Ellis, "Oh yes, she always was lucky—She has more friends than anybody in town"—you simply are not looking at the matter straight. The thing to do is—find out Mary Ellis' way of making friends, for as surely as she has them, so surely has she worked to attract and hold them. They never drop into one's lap by magic.

My mother used to say "Don't bother over how many people like you, the point is, how many do *you* like"—and that is what many persons fail to see. It is entirely "up to you." In the first place, be that unusual thing, a good listener. It helps a lot. Have some interest in other people's affairs even if they do bore you a bit. Probably yours bore them. Be generous with your sympathy, your appreciation, your loyalty, have a lot of "pep" in your comradeships, and watch for results! You will get them! But when you have made friends, don't forget that they are human, that there is bound to come some moment especially in an intimate friendship when your ideals are shattered, you are disappointed, irritated, your friend seems unworthy of your devotion. That is the time to switch from the normal fifty-fifty basis on which all friendships should be built, to a seventy-five—twenty-five basis, or perhaps for a moment of need to a hundred-to-nothing basis of love and trust. You will never regret it. Such an investment of loyalty pays big dividends of appreciation, and there is no wind of rumor or flood of disappointment that can destroy a comradeship with such a foundation.

Make friends whenever and wherever you can, by being friendly. Show that you like and like to be liked. And bind your own particular friends to you with unbreakable cords of mutual understanding and appreciation. Then you will never need to wonder why, like Mary Ellis, you have so many friends, for you will know the reason. "He who hath friends must show himself friendly"—That is all there is to it.

Oil Stove Care and Economies

Mrs. Leon H. Lewis Gives Hints for this Summer Labor-Saver

If you are to secure the maximum amount of heat from your oil stove and operate it safely and economically, you must observe certain rules for its care.

Keep the burners as clean as your husband does the carburetor of his car. Once or twice during the season remove the plug at the end of the pipe, drain off the oil and rinse thoroughly with clean kerosene. While doing this, have the stove tilted a little so that all of the sediment will run out.

During the night, when the stove is not in use, considerable oil will work up on to the burner, so before lighting in the morning, always wipe off the burner, and with the wick turned just to the edge of the burner, wipe off the charred edge. If the stove bothers about "running up," undoubtedly the small holes in the burner have become clogged so that the flame does not get sufficient air, and you will feel repaid if you remove the burners and boil them up as you do your lamp burners.

Always Keep it Clean

When food boils over, clean as soon as possible, for when it has had a chance to burn on, it is almost impossible to get it off without removing some of the paint. Then if you keep a folded paper on the shelf under the burners, you will find it very easy to keep that part of the stove clean. Above all, have a special time each day when you fill the tank and while you are about it fill it full. Keep a tin box handy into which drop your burned matches, but be sure they are out before you drop them into it.

I have heard many women say that they simply could not bake with an oil-stove. If you will secure some sheet asbestos and cut a piece to fit the bottom of the oven and another to place on top, and, over the latter put a straw-filled pillow or even several layers of newspaper, the heat will be much more evenly distributed, and your cookies and cakes will no longer burn on the bottom before they are done on top. This summer I mean to have a one-burner insulated oven, which, according to the New York State Bulletin on Fireless

Cookers, has certain advantages over the fireless cooker. This bulletin also gives directions for lining your old oven with asbestos.

Save Heat by a Little Planning

It takes planning to get dinner on an oil stove and have everything done at once and on time. While preparing your vegetables, have a teakettle of water heating. Then when the potatoes and the other vegetables are nicely boiling, set the basin containing the vegetable into the potato kettle, using it as a double boiler. If the kettle is large and the basin is small, it will do no harm if it sets directly on the potatoes. Then if you have a flat cover the teakettle can be set on top of this. Thus one burner does the work of three. If you are baking a dessert, plan to bake the meat or a cake for supper, or to make some kind of hot bread.

Whenever you have a fire in your range, make good use of it. Drop cookies and most kinds of cake can be stirred up the evening before baking (cover to prevent drying over the top) and all kinds of fresh fruit pies are just as good if they are made the day before they are baked. By having these all ready before hand, you can do more baking at once without interfering with your other work. Also much of the work of baking can be done in a cool kitchen. Be sure to heat all the water that you can then and plan to use it. On a hot day, a pail of water set in the sun, will be heated sufficiently, in a short time for many uses.

When ironing, the irons may be kept piping hot by inverting an old frying pan or sauce pan over them.

To Lengthen the Life of Wicks

If you are not afraid of soiled hands, you can double the life of the wicks in the following manner: Remove wick, and with an old knife or screwdriver, loosen the tin clips which hold the wick to the frame at the bottom and sew a double strip of outing flannel to the lower edge of wick. With a pair of pincers, fasten wick back and return to burner. I have tried joining two wicks,

but find the outing flannel much easier to sew on and it works quite as well.

Kerosene makes an ideal summer fuel and if the stove is properly cared for, it will give many years of satisfactory service.

A RUG-CLEANING HELP

ALICE MARGARET ASHTON

Electricity has revolutionized many of our old-time cleaning methods. But not all country housewives are yet privileged to clean their rugs with an electric cleaner.

When rugs must be cleaned with a beater a discarded bed-spring is one of the greatest helps imaginable. Place the springs on the grass, lay the rug over it and beat as usual. Being raised somewhat from the ground places the rug in a better position to receive the blows of the beater. And the dislodged dust instead of settling back into the rug falls to the ground beneath. The springs make a fine, clean place for dusting and sunning mattresses.

Oftentimes the old coil-springs were hinged in the center of the frame so as to fold in half. One of this kind is easiest to handle and takes up less storage room in the shed. But at most it is not very heavy or troublesome and is well worth the effort required to place it when a number of rugs require a thorough cleaning.

ON YOUR WATCH

What season of the year do you note on your watch? Spring.

What parts of the human body? Face and hands.

What indicates many? Numbers.

What sign of bondage? Chain.

What is most remorseless that you find there? Time.

What will most interest the physician? Case.

What the average person does six days of the week? Works.

What part of a flower? Stem.

What belong to us? Hours.

What is found that can never be first? Second.

What that infests cattle? Ticks.

What sign of honesty do many watches have? Open face.

What is found that we look for at the waxworks? Figures.

What expressing courage? (Metal) —Mettle.

SUITING THE THIN AND THE STOUT FIGURE

ONE price and one quality! No American Agriculturist pattern is more than 12 cents and according to our readers who tell us of their successes in dressmaking, no patterns on the market are better. We're not surprised to hear this, for we have one standard too, and that is the best.

CORRECT undergarments play an important part in making the best of the stout figure. One of the most important elements in giving the figure good lines is a well-fitted corset-cover—**No. 1758** is one with really slenderizing lines

No. 1758 comes in sizes 36, 38, 40, 42, 44, 46, 48 and 50-bust measure. Size 40 takes one yard of 36-inch material. **Pattern, 12c.**

CONTRASTING materials not only make the most effective and fashionable summer frocks, but they give such ample opportunity to use remnants that their cost is cut to the minimum without sacrificing style and appearance. **No. 1770** is such a dress.

No. 1770 comes in sizes 16 years, 36, 38, 40, 42, and 44-bust measure. For size 36 use 1½ yards of 32 or 36-inch material, with 1½ yards of contrasting. **Price, 12c.**

WHAT they call a porch frock—and that means you can wear it on the porch, in the kitchen or to run across to your neighbors—is illustrated in **No. 1755**. It is made of plain and checked gingham of ratine and chintz or of any other pretty combination.

No. 1755 requires 3¼ yards of 36-inch material, with half a yard contrasting. It comes in sizes 36, 40 and 44-bust measure. **Price of Pattern, 12c.**

To Order: Write name, full address, and pattern numbers and sizes very clearly; enclose correct remittance, and send to Pattern Department of American Agriculturist, 461 Fourth Avenue, New York City.

A big ten cents' worth—our summer catalogue brimful of sewing suggestions, well illustrated, practical and yet unusual. Add ten cents to your pattern order, ask for the style book and send your order to-day. The supply is not unlimited.

Reviewing the Latest Eastern Markets and Prices

SHIPPING POINT INSPECTION

HERSCHEL H. JONES

NO activity of government market bureaus has greater possibilities for improving the marketing of farm products than the official inspection of perishable vegetables and fruits at point-of-origin. In all sections where production is specialized and carlot shipments are made to distant markets the problem of grading, standardizing and establishing a definite basis of trading without actual inspection by the distant buyer, is fundamental. There is no estimating the losses both city market buyers and country shippers have suffered, either through ignorance or sharp practice because of lack of a system of certification as to the quality and condition of shipments of perishables.

Just as grading is the first step in better marketing, so shipping point inspection and terminal market inspection are essential to the enforcement of grading.

In cooperation with the United States

Bureau of Agricultural Economics, the New York State Department of Farms and Markets last year made a commendable start toward establishing shipping point inspection service in New York State, particularly with reference to potatoes. Inspectors selected by the Department of Farms and Markets, were trained by specialists from the Federal Bureau, and issued Federal certificates as to the grade, quality and condition of each car of potatoes they inspected. The work was organized and directed by H. D. Phillips of the State Department. A nominal fee was charged per car inspected.

When an inspected car went forward

The demand for old potatoes is slowly disappearing and if prices on the new go lower within the next few weeks, there will be a very few cars of the old marketed. States are moving to the trade at prices from \$2.25 to \$2.75 per 150-lb. sack. One of the largest New York jobbers of Northern grown potatoes will close his office Saturday for the summer.

HAY TRADE QUIET

There was very little activity in the hay market last week and very few changes in prices. Receipts were fairly light at all points. Good No. 2 timothy in large bales will bring \$25

hennery whites that went into cold storage at prices lower than quotations. The miscellaneous small express shipments were of very irregular quality and only a small portion could be sold in regular channels for immediate consumption at the range of prices quoted for average extras. The bulk of the nearby receipts sold at 29 to 32c per dozen. Undergrades went below this. The top price for New Jersey hennery whites, extras, was 38 @ 40c.

Storage packed firsts from the West were freely offered at 27½ to 28c. Speculative buyers are afraid to put more eggs into storage now except on a lower level of prices, and the general condition of the market is very weak. Most of the eggs now going to storage are put there by the shippers themselves to avoid sacrificing at lower prices.

DRESSED CALVES WEAKER

The demand for country dressed calves was not very active last week, and the tendency was toward lower prices on all grades. Dressed calves, veals, sold at the following prices per lb. on May 31, choice, 17c; prime, 14 @ 16c; good, 11 @ 13c; common, 8 @ 10c.

Dressed lambs were in light supply toward the end of last week and firm for fancy large with occasional sales as high as \$11 per carcass, but \$10 the top price for average best, poor to good ranged from \$3 to \$4 per carcass.

LIVE CALVES IN DEMAND

Although receipts of live calves were fairly heavy at New York last week, the buying was quite active and there was practically no accumulation of stock. Toward the end of the week prices advanced 50c with general sales of veals at \$11 to 13.50 per cwt. Live lambs were also in good demand. In the middle of last week several cars of the best Southern spring lambs brought \$16 @ 16.50 per cwt., but after the holiday the bulk of sales were \$15 @ 16.50, with one car of choice Virginia lambs selling at \$17.

LIMITED DEMAND FOR FEEDS

The Buffalo feed market continued dull and inactive last week. There were declines in meal feeds, oil meal and cottonseed meal during the week, supplies were liberal. Quotations May 31 on carlots Buffalo rate basis 100-lb. sacks per ton were:

Gluten feed, \$41.05; cottonseed meal, \$44.55; oil meal, \$40; standard spring bran, \$31; hard winter bran, \$31.50; choice flour middlings, \$36.50; standard spring middlings, \$34; white hominy, \$36.55. No. 2 yellow corn per bushel, 91½c; No. 2 white oats, per bushel, 49c.

CASH GRAIN QUOTATIONS

Cash grain quotations June 1, at New York were as follows:

Wheat, No. 2 red—\$1.46½; No. 2 hard winter, \$1.31; No. 2 mixed durum \$1.20½; corn, No. 2 yellow, 99c; No. 2 mixed, 98½c; No. 2 white, 99c; oats, No. 2 white, 54½ @ 55c; No. 3 white, 53½c; rye, 83½c.

Chicago: No. 2 hard winter, \$1.15½; corn, No. 2 white, 80 @ 80½c; No. 2 yellow, 80¼ @ 81½c; oats, No. 2 white, 43½ @ 44½c; No. 3 white, 42¾ @ 43½c; barley, 67 @ 69c.

Rearing Vigorous Pullets

(Continued from page 490)

are doing as well as they should. The following table will supply the necessary data.

GROWTH OF PULLETS EXPRESSED IN POUNDS AND WEEKS

Lbs.	Leghorns	Rocks	Wyandottes	Reds
1	9	8	8	9
2	15	12	12	14
3	25	15	16	19
4		19	20	25

In conclusion it might be said that the success of a poultryman depends on his ability to raise strong, vigorous pullets. There is not any most important period, but rather it is necessary to see that from the time the chick is hatched until it is housed that its growth is constant and uniform. If this is done the cares of winter will become less heavy and the eggs will come when the price pays.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on May 31:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.

it carried a copy of the certificate inside and a copy went to the buyer with the bill of lading. The shipper held a copy. Rejections because of declining market were eliminated, readjustments in price because quality was not up to specifications were reduced to a minimum, potatoes could be sold f. o. b. shipping point with the same security as a standardized factory product.

Twenty-two States are now carrying out some such plan of shipping point inspection in cooperation with the Federal government, many of them much more extensively than in New York. New Jersey is one of these. Western States have far outstripped the East in such service to their producers. It is hoped that in the coming season the work begun last year in New York may be greatly enlarged.

STRAWBERRY SUPPLY HEAVY

Strawberries are now arriving in the New York market in very large quantities. On June 1, receipts for one day were one and one-half million quarts. They sold at 6 to 10c per quart, with some fancy at 12 to 15c.

Long Island fresh vegetables are considerably retarded by the late season. The first bunched kale and white turnips from Long Island appeared in the farmers' markets last week.

The market for old crop State onions is practically dead. A shipment of 5,500 cwt. bags of onions arrived from Egypt on June 1, and sold at \$3.50 to \$3.65.

OLD POTATOES YIELD TO NEW

Out of 434 cars shipped on May 29 from all potato producing sections, from Maine to Florida and from Washington to Texas, 361 cars rolled from South Carolina. Possibly one-third of these cars were destined for New York City market.

Due to poor quality and careless grading, prices at New York piers show a wide range. Floridas, best, sold for \$7.50 bbl., poor, \$6.50 and wasty, considerably lower. South Carolinas sold from \$6 to \$5.50.

per ton, but most sales range from \$23 to \$24. One car of fancy large baled timothy sold at \$27.

BUTTER DECLINES STEADILY

There was generally a more conservative feeling reported all over the country among butter dealers last week. Although production has not increased very strongly yet, it is growing steadily. Wholesale prices fell 2 @ 2¼c from the previous week. Creamery extras (92 score) were quoted at 38½ @ 38¾c on May 31, compared with 41 @ 41½c lb., the week previous, and 34 @ 34½c lb., on the same date last year.

Future buying of June butter last week was all at 39c lb.

CHEESE MARKET STILL FIRM

The cheese market continued firm last week. State whole milk flats held average run were quoted May 31 at 28 to 28½c per lb; flats, fresh, average run 23½c; twins, fresh, average run 23¼ @ 23½c; State skims, flats, fresh, specials 18c per lb., fresh choice 15 @ 16c; undergrades 10 @ 14c.

BROILERS BRING GOOD PRICES

The usual active demand for broilers preceding Decoration Day was repeated this year, and those who got their broilers in early enough realized very good prices. Most of the colored broilers sold at 55c, but later the market settled down to 50c. There was a good demand for larger size Leghorn broilers. On Monday, before Decoration Day, they went as high as 55c but later settled down to 40 @ 45c. Some late receipts had to be carried over the holiday and sold out slowly.

Express fowls sold slowly and brought little more than freight shipments of fowls from the West.

Rabbits, live, were in light supply and sold at 32 to 33c lb.

EGG SUPPLIES EXCEED DEMAND

Nearby white eggs continued in heavy supply last week. There was a considerable surplus, even of fancy Jersey

A Bureau Not Used For Storing Clothes

(Continued from page 495)

Right here is where I get into trouble again! In my younger days I had considerable experience working out by the day and by the month. I have eaten at literally hundreds of farmers' tables. I can testify from personal experience that the cooking on many of these tables was the best that I have ever seen anywhere. But I must add that there were some where the cooking would ruin the digestion of a cast-iron bulldog.

Farm families have at hand unlimited supplies of milk, and with a little forethought, could have fresh fruits and vegetables in season and canned fruits all the year. With modern preservative methods, they can have canned chicken, beef and pork. Yet I have worked in families day after day, week in and week out, on heavy manual labor from ten to fourteen hours a day, and lived on a deadly diet consisting mainly of salt pork, milk gravy, bread and potatoes. I say again, that farm cooking can be the best in the world, and usually is, but even the best can be made better, and there is a lot of country cooking where there is plenty of room for improvement.

The home bureau does work in clothing where the aim is to teach the home maker the principles of clothing the family in accordance with health standards, good taste and economy. These include information on the wise buying of materials, patterns and ready-made clothing; tests for quality of material, and methods of garment-making which will reduce the amount of time and labor expended and the amount of material needed.

In home management projects, the aim is to put homes on a better business basis, with minimum expenditure of time, money and effort, and maximum returns in comfort, health and satisfaction.

Home hygiene and sanitation is an important part of the work, as are also projects in household furnishings and decoration. These include the study of how to recognize quality and how to select furnishings and decorations economically. One of the most important parts of the homemaking work is assistance to parents in helping in child-training. This helps to develop the child's mind and character, and train him in good citizenship.

Through the county organizations, State Federation and the home bureau agents themselves, much work is done in supporting movements like those for better rural schools, more recreation in rural communities, better county fairs, community and county libraries and improvement of the rural church.

This is just a brief glimpse of the splendid job which the home bureaus

are doing. We have seen enough of it to wish that every woman was a member of the local organization and that such organization existed in every county in the land.

Perhaps this summary of what the home bureau is trying to do bears out my statement that through organization the women are showing themselves what a big job the profession of home-making really is. Whether a woman gets her training in the School of Home Economics or in the School of Hard Knocks, if she is to be a successful homemaker she must have more training and ability along more different lines than is needed in any other occupation in which modern woman is now engaged.

Therefore, when the home bureau has brought women to this realization and appreciation of the world's fundamental job, it has justified a thousand times the cost and hard work and sacrifice that the members and leaders of the home economics movement are making.

What Is Needed in Every Farm Home

(Continued from page 485)

Look about you a bit. How many things did you purchase in the last year that were one-half as necessary as the bathtub, considering it from a health standpoint? And when health is gone, what else counts? It need not be one of the higher-priced ones. The folding tub is not so lasting, but serves the purpose well, and is cheap. Deny yourself of a few luxuries and one is yours. Is it not true that hundreds of families spend the price of a cheaper tub in needless luxuries and notions in a month's time, then speak of not being able to afford it? The better grade of tubs can now be obtained equipped with heater and built to fold and be wheeled into a corner and also into another room.

The family of medium circumstances can have one of these when it is impossible to have a well-equipped bathroom in the house. Yet we can enumerate hundreds of homes in this section who do not even think of a bathtub.

Yet the very instant any symptom flares up the doctor gets a job. Well and good. That is their business, but I honestly believe that in many cases a prescription calling for a bathtub in the home would do more good in the end than the usual prescription of drugs. A vast amount of ills come from unsanitary conditions.

Without proper bathing health wanes. —W. E. F., Baltic, Ohio.

Only 18 hours from New York City. Chicks will reach you quickly.

A sketch showing the arrangement of buildings on the New York State Fair Grounds, which are to be used by the National Dairy Exposition next October

JUST within the main entrance gates to the left is the big Manufacturers' Exhibit Building which will contain the United States Department of Agriculture's panoramic exhibit of the development of American dairying, and exhibits of dairy equipment and supplies. Across the plaza on the right of the entrance gates is the State Institutions Building which will also contain dairy factory machinery and supply exhibits. Beyond it, connected by a colonnade, is the Dairy Building wherein will be shown the butter and cheese exhibits, foreign exhibits of dairy products and equipment, human welfare exhibits, and where demonstrations by Boy and Girl Clubs and domestic science teachers will be conducted.

Behind the State Institutions Building is the new cattle barn wherein will be housed more than 1,000 of America's finest dairy cattle. Leading on from the barn is shown the Coliseum now under construction and which is to be dedicated by the Exposition.

Dad's Secretary!

NO longer are business letters, purchase orders, and farm reports classed among the chores. Ever since Dad got the Underwood Portable, Mary has been taking a load of trouble off his shoulders.

Dad just "thinks out loud", and Mary's quick wits and nimble fingers do the rest. The Portable enables her to put words and figures on paper in a way that is rapid, clear, and businesslike. And she keeps on file a carbon copy of everything she writes.

Dad's reputation as a good business man has grown as a result of all his letters being typewritten. Business men instinctively respect others who are up-to-date and business-like in their methods.

No one needs to go to business college to learn to operate the Underwood Portable. The knack is easily acquired, with the aid of the instruction booklet that comes with every machine. Young folks who gain at home a knowledge of typewriting have a valuable asset whatever their life work may be.

UNDERWOOD TYPEWRITER CO., INC., Underwood Building, New York City

Marketing Fruits and Vegetables

An A. A. Radio Talk Broadcast on June 13 at 6:50 P. M. from WEA F

ONCE more the round of seasons begins to bring nearby producing sections into consideration in the big New York wholesale market. In the farmers' public markets the variety and quantity of new green vegetables is steadily increasing. Southern New Jersey has been sending lettuce, asparagus, beets and other new vegetables to New York for several weeks, and New Jersey is now vying with Maryland as a source of supply of strawberries.

Among the vegetables now coming from Long Island and other nearby trucking sections are asparagus, beet tops, carrots, dill, kohlrabi, leeks, lettuce, onions, parsley, radishes, rhubarb, romaine, sour grass, spinach, Brussel sprouts, turnips, and hot-house cauliflower and tomatoes.

Hudson River strawberries made their first appearance of the season last week. In spite of a glut in the supply of strawberries and a very weak market, these first Hudson River berries brought 15 to 25c per quart, wholesale. Rhubarb and a few early vegetables are also coming now from the Hudson Valley.

Orange County, New York, began shipping spinach last week. The first shipment was sold at 50c per 5 peck hamper.

Gradually the centers of production shift northward from mid-winter to fall. It is fascinating to watch the never-ending procession of fresh-grown things in the New York wholesale market. The one thing that large growers and marketing organizations aim for, especially in the distant States, is

By **HERSCHEL H. JONES**

to have their product in the market when supplies from elsewhere are light. So keen and so nation-wide is the competition of perishable farm products, that in New York and other large sections the people hardly know when a thing is in season. With few exceptions, the man who makes most money out of shipping to the New York market is the one who gets his produce there when the other fellow doesn't have any.

With such a commodity as watermelons, of course, weather is the biggest factor in making a market. Very little changes in temperature or humidity may make a huge difference in appetite of ten million people. The recent hot spell, for example, caused an increased demand for fresh salad vegetables, that reflected itself in higher prices and demand for many carloads more per day. Cucumbers, the best of which are now coming from South Carolina, went up to \$6 and \$7 per bushel crate, wholesale. If one-third of the ten million people supplied through the New York market suddenly decide to eat salad instead of heavier vegetables or meats, the sense of this increased demand passes quickly back from retailer to jobber, and from jobber to wholesaler.

It is the influence of such factors that cause demand to fluctuate that is often not understood by the man in the country. Supply is only part of what makes a market. And the most expert salesmen in the produce business, gauge all the factors that make the market chiefly by instinct or feeling. Strange

as it may seem there is little science to the game of selling perishables as it is now practiced.

From the producers' standpoint, however, here are some suggestions to keep in mind in marketing this season's fruits and vegetables:

(1) Efficient transportation and marketing are as essential to your success as efficient production.

(2) Grading for absolute uniformity in size, quality, freshness and freedom from disease always pays. Keep the culls at home, or sell them as such, and you'll make more money out of the crop. The United States Department of Agriculture has standard grades for a long list of farm products which are furnished free on application.

(3) Method of packing and the package itself have a lot to do with selling anything. Buyers buy by their eyes. It pays to have the package the trade wants and to pack as the market requires.

(4) If shipping to New York wholesale market, arrange your shipments so as to get them in before midnight, or not later than 2 A. M. so as to be there when the market is at its best.

(5) Utilize the public information at your disposal through government reports, newspapers, and our own market page to keep in close touch with market conditions.

What I have said has necessarily been very general, but whenever you want specific information on your own marketing problem, write to the American Agriculturist and we'll get it for you.

Can You Tell What Teazles Are Used For?

Little is Known of This Farm Enterprise Centered Around Skaneateles, N. Y.

YOUR editor has asked me to tell you about teazles, probably because I used to, as county agent, work with farmers around Skaneateles, which is the center of the teazle production in the United States.

Teazle burrs are used by manufacturers of woollens to bring up the nap. To date no invention of man has succeeded in providing a better means than nature provided to do this job, particularly on the finer worsteds and broadcloth.

In order to have this story relate the experience of a teazle grower, I went to our G. L. F. Agent, George M. Talcott who with his partner Mr. Feeley runs the stone mill at Skaneateles. It was in the feed store that Mr. Talcott gave me his experiences in growing teazles which he characterizes as not making him rich by any means, but growing teazles had saved his neck several times.

Mr. Talcott always farmed it until recently when he moved to town. He still operates several farms with his tenants. Teazles, with him, fitted into the rotation of general crops such as wheat, corn, oats, cabbage, potatoes and hay which are grown around Skaneateles.

Introduced in 1820

It was William Snooks, an Englishman, who in 1820 started the teazle industry in Skaneateles by bringing seeds from England and planting them in what proved to be soil well adapted to their growth. Since that time the teazle industry continually developed until a few years before the war when prices were so low that there was a considerable falling off in teazle planting.

George Godfrey proved that Skaneateles

By **E. C. WEATHERBY**

was best adapted to the growing of teazles when he, as an experienced hand at the game, went to Oregon some 25 years ago and tried to establish the industry there. It is reported that he raised a fair quality of teazles but could not market them because of the lack of local marketing facilities and high transportation costs in getting the commodity to market.

Two Years to Get a Crop

As nearly as I could find out, it is the cumulative experience gained after many years growing teazles plus the marketing facilities that are available at Skaneateles that make this town at the foot of the beautiful Skaneateles Lake famous as the center of the teazle industry.

As far as soil conditions are concerned, there are many theories. We do know that Skaneateles is in the limestone section, that the water from the lake is considered the purest, being used to supply the city of Syracuse. Oats in the section stand up till harvest time, while in other sections they go down badly.

Teazle seeds have to be planted early in the spring in rows three feet apart and covered with about a half inch of soil. As they come along, they are thinned out to from four to five inches apart in the row. At corn planting time a hill of corn is put in the row about every six feet. Corn is planted in order to have a break that will catch the snow in the winter and keep the teazle plant well covered, as winterkilling is one of the most severe handicaps to the industry. The cornstalks are left standing, the corn being

pulled in the western style. During the second season beginning early in the spring, shallow cultivation and occasional hoeing is necessary, as it is during this season that the plant throws out the shoots that bear the burrs.

After wheat is cut and in the barn, the harvesting of teazles begins. This is usually between July 20 and August 10. Experienced cutters, using a hooked knife, cut the ripe teazles about five inches below the burr. The patch is cut over three times and the cuttings are about a week apart.

The teazles as cut are piled in large two bushel baskets which are dumped in hay racks with tight bottoms which stand at the end of the rows. These hay racks are used to draw the teazles to the barn.

Harvested After Wheat

Another reason why teazles are not generally grown is that there is special equipment necessary in curing them. The barn has to have ventilation something like a tobacco drying house and the teazles are piled on slate bottomed racks. These racks are made with loose 2" x 3" pieces laid about three inches apart. The teazles are piled on these to a depth of two feet.

Two or three days after being placed on the drying racks these bottom pieces are turned on edge and in a couple more days every other piece is pulled out. This provides for a better circulation of air.

Once the burrs are properly cured, they are let down on the barn floor and stored until winter when they are delivered to the buyer's warehouse in the village. They are drawn without grading in the large hay

The World's Greatest Shopping Places

Where Are Displayed Everything From Diamonds to Doughnuts

ONCE upon a time there was a man who had to spend considerable time riding from his home to his place of business. Every time that he opened his newspaper or his magazine he found an advertisement urging him to try a certain brand of breakfast food. When he looked up from his paper, he found the same advertisement staring at him from a sign on the side of the car, and it was again impressed upon his vision from big billboards when he looked out of the car windows. Convinced at last that there must be something to it, he bought a package and took it home. The next morning, he tried to eat it and did not like it. Then he offered it to his dog, and the dog also refused it.

After another week of reading the same advertisements constantly whether he wanted to or not, he concluded that something must have been the matter with him in his first trial of this breakfast food; so he tried it again, liked it a little better but was not over-enthusiastic about it, and offered the biggest part of it again to his dog, who still refused to eat it, and growled menacingly when the man persisted.

Back and forth, to and from the city, for another week, he continued constantly to absorb unconsciously some of the advertised statements about this particular breakfast food until he again concluded that he must have failed the first two times to give the stuff a fair trial. And for the third time, he had it served for a morning meal. This time he found it excellent and thereafter demanded it regularly.

Thinking that the dog may have been mistaken too, he again tried to get the dog to eat it, but the dog not only turned it down but bit the man in the leg for offering it to him. He then came to the conclusion that the only difference between him and the dog was that he could read advertisements and the dog could not!

So accustomed are we to seeing advertising in our papers, magazines and on billboards, that few of us have any idea of the tremendous indirect or subconscious influence of this method of selling ideas and merchandise.

A few days ago a hardware merchant in a small town was visited by a caller who wanted to get some first hand information about the results of advertising.

"Do you keep Valspar?" asked the visitor naming this well known and highly advertised varnish.

"No, I do not," said the dealer. "This kind that I do keep is just as good, even if it is not advertised so blame much. I think this advertising business is all bunk anyway."

This was rather a discouraging start, but the visitor could not let the argument end

On the other side of the room was quite a sizable display of seeds of a well-known seed firm that has advertised extensively for many years.

"I see you have seeds. Do you like them?"

"Yes," replied the dealer, "I have carried them for twenty years and I sell lots of them."

When he was told that this seed firm, whose seeds he sold, spent thousands of dollars every year in helping him to sell those seeds through advertising, he said that he had never seen any of their advertisements, and he acted as though he doubted the statement.

This local dealer did not realize, and probably the average person does not know that much of modern business is based directly or indirectly upon the very thing that this dealer so heartily cursed—Advertising.

Fortunately, for us, the human mind has a habit of unconsciously registering upon its memory truths which are often repeated. Like the dealer mentioned, we may not believe in advertising, but its effects and results are just the same, and whether we know it or not, those results are contributing to our welfare because of the large part advertising plays in modern business and in modern civilization. Let us bring to your mind some examples to show that you and your life have been influenced by advertising. For instance, maybe you do not believe in advertising and never read it, but we bet you have heard of Sunkist oranges, a trade name that has brought prosperity to a cooperative organization of farmers through advertising.

If advertising has never had any effect on you, then, of course, you have never heard of Ivory soap, Heinz' pickles, Campbell's soup, Del Monte canned goods, Coca Cola, Postum, Jello, Blue Diamond walnuts, Blue Ribbon dried peaches, Kraft cheese, Elgin, Waltham or Ingersoll watches, Perfection oil heaters, Parawax paraffine, Eastman Kodaks, or Wearever aluminum and so on ad infinitum. If advertising never had any effect on you or your business, what about Dairymen's League ice cream, or Dairylea condensed and evaporated milk, or G. L. F. farm seeds or cattle feeds.

If you do not read ads, of course you have never seen the picture of the old man wheeling a barrow full of vegetables, which has made famous the Peter Hender-

(Continued on page 507)

\$7 a Week For Your "Daily"

A NEW YORK newspaper recently made the statement that were it not for advertising, subscribers would have to pay about \$1 a copy for their daily newspaper, instead of 3 cents. The article on this page will give you a brief but interesting glimpse of "behind the scenes" in the publishing business.

there, so he said, "Well don't you have any calls for Valspar?"

"Yes, I do," the dealer replied, "but I try to sell the customer the kind I keep. I don't always succeed, of course. They keep Valspar at the store across the road, and when some fool people get an idea in their heads, you can't get it out."

Are Farm People for Prohibition?

NOTICE in your issue of May 26 that farm organizations are very strong for prohibition. Allow me to protest this claim. There are many, many men who are members of farm organizations that never touch a drop of alcoholic drinks that think as much of prohibition as they would of having a rattlesnake in bed with them. In fact, they think that prohibition is the worst curse that has ever been put over on innocent people, secured by lies, threats and misrepresentation. In this resolution the members had no say. For all you know, there may be 70 per cent against it. Many of them are, and I believe that the days of prohibition are numbered. Let us hope so. I am a strict abstainer.

Shortly after the New York State Legislature passed the bill repealing the Mullan-Gage Law, a joint meeting of the New York State Conference Board of Farm Organizations and New York State Cooperative Council, representing practically all the farm organizations of the State, adopted a resolution unanimously against the repeal of the Mullan-Gage Law. We reported this action in the news columns of our May 26 issue, which led to our receiving the above letter.

The most that the leaders of farm organizations can do on any question, and the most that a farm publication can do is to speak honestly for what they believe to be the opinion and wishes of a majority of farm people. We are sure that a majority of farmers are for prohibition. We are especially sure that they were opposed to the repeal of the Mullan-Gage Law, which gave State support to the National Government in enforcing the Eighteenth Amendment to the United States Constitution.

There has been a good deal of loose talking and joking about bootlegging, but when all is done and said, there has been less crime, less men in jail for drunkenness, less discord and unhappiness in thousands of American families and more money to spend for the benefit of all of the family since the Eighteenth Amendment than ever before. Therefore, the question whether or not prohibition is to continue to be a law of the land is one of the most, if not the most, important problem before the American people to-day.

Unless those who are for it are ready to stand up and be counted, our correspondent is right when he says that the days of prohibition are numbered.

Are we wrong in interpreting farm sentiment on this subject? If so, we want to know it. Is the writer of the above letter right when he says that there may be 70 per cent of farm people against prohibition? Or is it nearer the truth that 95 per cent of the farm people bitterly regret the repeal of the Mullan-Gage Law?

Are we right or wrong? Let us have your views in a short letter. Ten thousand farm letters would be an effective answer to those who say farmers are opposed to prohibition. Any letter published will not be signed unless you wish it.

Good Farming and Bad Weather

THE month of May was one of the coldest and also in most sections one of the driest on record. As a result, it has been taking considerable of the farmer's time lately to cuss the weather. Warmer weather and some scattering showers during the early part of June is relieving the situation somewhat, but such a long period of unfavorable weather has created a serious situation on many farms. Hay is likely to be light; pastures have been backward and poor, and many planted crops came up poorly and have made little progress.

It is in the unfavorable season that the poorer class of farmers get hit the hardest, particularly those who have little opportunity or make little effort to practice better methods. For instance, seeds that are weak in germinating power may do fairly well in a good season, but will come pretty close to failure in a bad one. After the seed is up, those crops that have been well planted, well cultivated and have had other extra care will come through pretty well in spite of bad weather; but no crop, and no animal, can stand the combination of a poor season coupled with poor care.

Most farmers have learned that it is poor business to get very much discouraged, at least until the season's story is told and the harvest is over. Time and time again we have seen crops that did not promise much in the beginning that finally came through in pretty fair shape in the end. It is almost astounding, for instance, to watch the growth of a corn field which may dally along making a poor growth and looking rather sickly at the beginning, and until early July, and then suddenly wake up and shoot ahead surprisingly for the next six or eight weeks. Farmers know, too, that even though the season is unfavorable, those who use good methods are pretty apt to have as much, or more, money as they do in a season when there is a too-abundant harvest with resulting low prices.

"Tradin' Horses"

"EDDIE," says George Duff to us a year or so ago when we were on a visit to Thompson's Creek, "I have been tradin' horses again, and I'll bet that feller I traded with will feel like thirty cents when he finds what I let him in for with that old crowbait I got off on him, especially when he remembers that really good horse he gave me for him."

We said nothing, and kept right on saying it, for we well knew from knowledge of Duff's previous and frequent excursions into the field of horse barter and trade, that all we had to do was to keep still and the action, or mayhap the lack of it of this latest addition to the Duff stables, would speak for itself.

There may be business deals where both parties profit, but horse trading is not among them. Judging from Duff's frequent experi-

ences, it seems to be a case of "To him that hath, it shall be given, but to him that hath not, it shall be taken away, even that which he hath." George Duff was right in his bragging about getting rid of a "crowbait" in this, his latest deal, but he should have stopped right there without any undue enthusiasm for what he received in return.

Shortly after the trade, George had to go to town and he thought it an excellent opportunity to drive the new horse down the valley as a sort of an exhibit to envious neighbors. He did so and there was an exhibition, but no envy developed on the part of the neighbors. At the second farm Duff stopped to pass the time of day. When it came to starting again, no ordinary means of entreaty or persuasion could rid this horse of a most embarrassing determination to "stay put." Finally Duff tried the remedy for balking horses which had been effective on the results of other and previous horse deals. The remedy worked. In fact, it worked so well that the horse went away from there so fast that he left poor Duff standing in the middle of the road with his mouth open horrifiedly watching his newly-acquired property hitched to the poor old democrat wagon end a run-a-way down the road by attempting to climb a telephone pole.

Several months later we were again visiting with George in his horse barn. As we talked there came every now and then from the stables back of us a hollow and dismal cough, and each time we noticed a strained and worried look on Duff's usually cheerful countenance, accompanied by a rather forced effort to divert our mind by speeding up the conversation. Finally we said, "Say, Duff, we hate to be pessimistic, but that new horse of yours certainly has a bad case of the heaves."

"Heaves? No," says Duff, "all he's got is just a little cold."

"By the way," we continued, "when we were here last time you were quite enthusiastic about your new horse and were telling us that he was sound, willing, and perfectly safe for women to drive. Did he prove out all right?"

"Oh yes," said Duff, "of course, he is wind-broken, has the heaves, three spavins, is blind in one eye, and can't see out of the other; but otherwise, he is perfectly sound. As to safety, he will bite, kick, strike and run away; otherwise he is perfectly safe for women to drive."

"By the way, I'd just as soon you didn't mention this conversation. Jim Smith, over Richland way, who traded me four or five years ago that horse that developed the blind staggers, telephoned that he might drop down here in a day or so and we may be able to whack up a trade."

The Good Half Supports the Bad

THE National Dairy Association points out that of the 25,000,000 dairy cows two years old and over in the United States, there are 5,000,000 that are really non-producers which could be eliminated entirely with no loss to the nation's wealth. The average production in the United States per animal is only about 4,000 pounds, while the average production from cows of good commercial herds ranges from 6,000 to 12,000 pounds per cow, with individual records mounting still higher. Therefore, half of the cows in the United States give less than 4,000 pounds of milk per year. By the elimination of the poor one-fifth or 5,000,000 cows, the output of milk would be reduced one-sixth, a loss which could easily be overcome in the improvement of the care and feeding of the remaining cows to the greatly increased profit to everyone in the dairy industry. One half the cows must first support the other half before they can support the farmer and his family.

A June Story

By E. R. EASTMAN

"**B**LESSINGS on thee, little man,
Barefoot boy, with cheek of tan!
With thy turned-up pantaloons,
And thy merry whistled tunes;
With thy red lip, redder still,
Kissed by strawberries on the hill.

"Oh, for boyhood's time of June,
Crowding years in one brief moon,
When all things I heard or saw,
Me, their master, waited for."

—WHITTIER

In an old back hill lot one June day a quarter of a century ago, a barefoot boy was picking wild strawberries. The primitive calls runs high in every country youngster. Some of them satisfy it by getting away once in a while from the dull and monotonous round of farm work to go fishing; others will tramp all day with a gun in the autumnal woods, hoping to get a rabbit or partridge; and still others find some real fun in going berrying.

In a way it is too bad that the old slashings with their fallen and rotting logs and their berry bushes growing higher than a man's head have mostly disappeared from the East. In them the rabbits scurried up and down; the cat bird cried "Thief, Thief!" and the blackberries grew large and plentiful.

There is something of the spirit of gold mining that comes to the young berry picker when he discovers a real "berry patch" and there is no achievement that may come to one in later life that quite equals the satisfaction of Mother's praise for a pail of berries which "was heaping full before they settled."

From where the boy stood, there stretched away hundreds of acres of poor hill land, good for nothing but woods, on which no farming should ever have been attempted. Twenty-five years ago and still to-day there are thousands of such acres throughout the East covered with worthless wire grass, daises and devil's paintbrush.

Down on the other side of the lot, old Milden was plowing under the weeds

in the vain hope of producing a good crop of buckwheat. As the boy paused from his picking to absorb some of the spirit of the June day, there came up to him across the lot a constant stream of invective and expostulation from old Milden as he labored with his horses, the poor plow and the stony worthless soil.

The boy can close his eyes and look back across a crowded twenty-five years, and as if it were yesterday, he can still see the old fellow urging his horses along

THE CRY OF THE DREAMER

I am tired of planning and toiling
In the crowded hives of men;
Heart-weary of building and spoiling,
And spoiling and building again,
And I long for the dear old river,
Where I dreamed my youth away;
For a dreamer lives forever
And a toiler dies in a day.

I am sick of the showy seeming
Of a life that is half a lie:
Of the faces lined with scheming
In the throng that hurries by.
From the sleepless thoughts' endeavor
I would go where the children play;
For a dreamer lives forever,
And a thinker dies in a day.

I can feel no pride, but pity
For the burdens the rich endure:
There is nothing sweet in the city
But the patient lives of the poor.
Oh! the little hands too skillful,
And the child mind choked with weeds!
The daughter's heart grown willful,
And the father's heart that bleeds!

No, no! From the street's rude bustle,
From trophies of mart and stage,
I would fly to the wood's low rustle
And the meadow's kindly page.
Let me dream as of old by the river,
And be loved for the dream alway;
For a dreamer lives forever,
And a toiler dies in a day.

—John Boyle O'Reilly.

the stony furrow and hear him curse the old farm plugs in a harmless and ineffectual manner.

"Dod blast your danged hides, geeup out o' thar 'fore I git a rail and complete your education! Ginger to grindstones git out o' that thar furrow, can't ye?"

The strawberries seemed to run pretty good for awhile, but as the paintbrush became more dense the berries got scarcer and the boy was beginning to feel that he could not get the big pail full. He had a feeling that there were more and bigger berries near where Milden was plowing, but because of the fierce talk the boy feared that if he went down there he would be chased.

Finally becoming completely discouraged, he started for home, and Milden saw him. "Hey, boy! Come here" said he. Expecting a scolding the boy went down to where the old fellow had stopped his horses. "Ain't got your pail full have yuh?" said he. "This danged soil has got so, most of it won't even grow wild strawberries. But if you go up on the upper side of this 'land' you'll find a nice lot of berries. I used to find it kind o' pleasant to go berryin' myself years ago and I know how you feel to have to go home without your pail full. By ginger, this dod-

blasted farmin' business leaves me little chance now-a-days for any of the pleasant things o' life. Go on thar Dave, git up Sal!" and the plowing with its accompanying storm of expostulation began again.

Following Milden's kindly advice the boy found the berries thicker and filled his pail.

On the way home down the long, dug road he saw something shining in the dirt and digging it out found it to be a silver dollar, which in those days to a country boy was a very great fortune indeed. So great, in fact, that that pleasant June day so long ago—because of Mother's praise over the milk pail full of berries and the shining silver dollar—still stands a high-spot in the hall of boyhood's memories.

* * *

Last summer we rode by the place where Milden used to live. The farm was deserted. The barns had fallen in and the windows of the farmhouse had been broken by boys of another generation. Never again will the old place know the joys and sorrows of a farm home, nor the laughter of little children.

As we stood looking at the ruined buildings, so typical of the hopes of thousands of farmers whose struggle for a life time with debt, the devil's paintbrush and a worn-out soil, the hope came that Milden and all his fellows have found a place where the devil's paintbrush blooms not, and where the hard struggle for existence, leaves more time for some of the pleasant things.

ROSS ~the Tried and Tested IN-DE-STR-UCT-O Galvanized Metal SILO

"NOT one ounce of spoiled silage." That's what M. P. Cody of Decatur, Mich., says of his ROSS "In-de-str-uct-o" silo. Every day we get letters from satisfied owners telling us the "In-de-str-uct-o" is the easiest of all silos to erect—the silo that produces 99% Food Value Silage—from every standpoint.

The Safest Silo Investment.

Before you contract for any make of silo—at any price—get all of the Ross facts before you. Find out what you save—in first cost, in labor, and in silage—by choosing the times-tested, fire-proof, rust-proof "In-de-str-uct-o."

Here is the worthy product of a pioneer plant. Seventy-three years of honest dealing backs every Ross promise. Write for complete information.

The Desire To "Do"

What We Need Most in this World is Inspiration

A FEW weeks' rest has been good for all of us. I find it often most embarrassing to write about practical matters because they don't work out as I expected they would. Then again, I see the work being done by many quiet people, unheralded and without thought of public notice, that is better than mine, and I wonder what their feelings must be if they read what I say. However, there may be some inspiration gained, and so, after all, there may be good come out of it. My observation has been these many years that adults as a whole are more in need of inspiration than of information or education. In fact,

H. E. COOK

when I become deeply interested in an article, or what some one tells me, it is the desire aroused in me to do, rather than the "how" of what is said that does the good.

Facts are no good until we assimilate them into our own mental fiber organized and arranged according to our own particular method of filing and book-keeping. One of the most outstanding farmers' institute directors of this country some 25 years ago, the Hon. O. C. Gregg of Minnesota, reckoned the purely educational features as of minor importance. His plan was to hold large meetings where mass psychology could be trained into action, and then he said the people will get the facts through contact and from published information.

Generally speaking, Mr. Gregg, in his palmy days, was not rated high, but more and more, as the years go by, I rate him ever higher. We all know people who have the power within themselves to generate all the enthusiasm that they can put into practical use, and then we say they are self-made. Well, whatever it is, it makes the wheels of industry and social order go round and gets things done.

A Leader of Men

More than 30 years ago, a widely known lecturer, who was himself a business failure, led thousands to make better butter and to feed balanced rations which put their own business going right. And so, if I have ever given renewed courage to anyone, perhaps it is worth while, and I ought not to have a grudge against myself. Dooley once said, in the days when Roosevelt was getting first headlines, "that no man who had a grudge against himself would ever be Governor of a great State." Give us clean, wholesome, forward-looking vision and inspiration, and we won't go far astray.

Never before in the history of the world has there been the opportunity

By H. E. COOK

for such a vast number of young people without inherited means to become owners of property as now. Maybe no times are better for the rare individual who crops out only occasionally. The earning power of a person without a single dollar to keep him is just simply enormous as long as single. Of course, when a family is to be supported, the story is a different one.

Young Folks Less Economical

But I do know that young people are not as a rule developing economy. With all of the apparent unbalanced economic relationship between the farm and city, I do not believe there is a better chance for the average young man, than the rarely specialized, unusual one, to work in the rural sections and make economy a cardinal virtue. Lands and homes are cheap. Five thousand dollars will buy a business and a home, and nowhere can a good business man do a larger volume of business based upon the investment than upon this \$5,000 farm.

The personal element valuation can be expanded all out of proportion to the money invested. The weakness of the situation is that the selling value of the business does not increase with the income because the man power is the outstanding force and value. But why sell? We must live somewhere, and staying in one place and building a reputation for character and high-grade production isn't set up over night like a circus tent, by any means.

One of the finest compliments I have ever heard paid to a person was this statement by a townsman to the Rev. Dr. J. M. Payson, with whom I was associated at the St. Lawrence State School for nine years. He said that whatever the Doctor did he was always in competition with himself, and I can vouch that it was true, every word.

A Worthy Challenge

Its originality and deserved application marked it with me as never to be forgotten. He wasn't in competition with anyone else, but always trying to do a little better than before. And there is no place under the sun where that plan carries farther to-day than in the production of farm products. It is not true that consumers fail to recognize quality. They may not take to what the producers say at the outset, but if he is always in competition with himself, his reputation soon gets into the atmosphere and people expect quality and no questions asked, and it won't make any difference what the product may be. And so, boys, cut out some of the movies. Buy necessities of good quality. Don't look shabby.

Pick out a savings bank and regularly deposit a certain percentage of your earnings, it won't matter how much, for if continued long enough the delight of adding each week or month will soon be more attractive than the movies or automobiles. And the amount will then take care of itself. It's worth trying.

Figures from the United States Department of Agriculture show that the consumption of milk is increasing in the city but not in the country. The "milk bar" at farm picnics and country fairs are becoming more popular. We should have more of them.

CRAINE SILOS

give three-fold protection to your silage. They keep warmth and juices in and keep cold and weather out.

Every square inch of a Craine Silo is protected against stress and strain in any direction.

You can tell a Craine from any other wood silo. Smooth and handsome. No hoops to tighten or loosen. Once up, a Craine stays put. Craine Silos are cheapest to own.

Send for illustrated catalog.
Any old stave, iron hooped silo can be rebuilt into a Craine 3-wall Silo at about half the cost of a new one. Catalog shows how.

The World's Greatest Shopping Place

(Continued from page 503)

son brand of seeds. And you have missed that wonderful advertisement showing a dog looking into a Victrola and entitled "His Master's Voice."

But, of course, you do believe in advertising, or, at least, you use it, in one way or another, both in the sale of your products and in what you buy, for it is practically impossible to do even a small business without being affected by it.

Its largest and also its best development has been within the last twenty-five years. We are sorry to say that in its earliest days advertising was not the honest and reputable business that it is to-day. Early advertisers, for some reason or other, did not at first realize that honesty is the best policy, and they seemed to vie with one another in exaggerated and actually untruthful statements about the wares they were trying to sell.

Even many of the more reputable papers and magazines once carried "ads" that promised "something for nothing," and endeavored to get the consumer's dollar on misrepresented statements. How many thousands of farm boys and girls have pored wistfully over advertisements which promised in such glowing terms the absolutely impossible to those who would send them money? How well we remember our own wild dreams of becoming a great hypnotist and making barrels of money. All we had to do was to answer an advertisement and send \$5 for the correspondence course in hypnotism. There were many in the old days who answered such solicitations only to be disillusioned and disappointed, and to have ingrained a prejudice against all advertisers and advertising which years of truthful statements and honest dealing have not been able to overcome entirely.

So great was this prejudice built up by the dishonest advertiser that even to-day the average reader does not realize the complete revolution that took place years ago in advertising methods, and the tremendous extent to which every business in the world, including even farming, is built up on one kind of paid publicity or another. The great majority of advertising to-day is reputable and reliable. Any magazine which accepts that which is not, is soon doomed to failure, and any advertiser who long persists in statements which are not borne out by fact not only will not long succeed, but is headed straight for jail.

Some of the best trained men in the business world are engaged in the advertising business. Talent fully equal to that of editors and writers of editorial matter in magazines goes into the writing of advertisements that are attractive, instructive and worth reading. The sky is the limit for writing advertisements which will sell the object advertised. But there is always one qualification insisted upon above all others, and that is honesty in statements.

The advertising pages of honest papers and magazines are the world's greatest shopping places, where the consumer can go at his leisure and buy anything that all the merchants of the world have for sale from a dress for the baby starting life's journey to the coffin at the end of it.

How many, many times, we used to hear father complain about some issue of his favorite paper because he thought it contained too much advertising. The same complaint is often heard still. Father did not realize that were it not for the advertising in his paper, he probably would not have had any paper at all. He would not have been able to afford it. Father did not know—and the average reader of to-day does not know—that the subscription price of most publications is a mighty small item toward paying for the tremendous publication costs.

For instance, one can buy fifty-two issues of a great magazine like the "Saturday Evening Post" for two dollars a year. This is about four cents a copy. The paper alone used in the "Post" costs pretty nearly as much as the subscriber pays for the completed magazine. This is to say nothing at all of the hundreds of thousands of dollars which pay for stories, articles and other editorial costs; and to say nothing of the hundreds of thousands

of dollars for investment in printing presses and for the payment of the thousands of workers.

The same is true of other magazines, and of the weekly and daily newspapers. Often the trouble of obtaining and maintaining the subscriptions costs more than all of the money that comes from them. It is advertising—and advertising alone—which has made the people of America the greatest reading public in the world by giving them almost unlimited amounts of best in news, information and literature at a purely nominal cost, and all of this is in addition to the big part it has played in our industrial and social life.

Can You Tell What Teazles Are Used For?

(Continued from page 502)

racks which can carry about a half ton. The average production per acre is 150,000 burrs.

The variance in the size of the burrs and the fluctuating demand from the different mills makes the marketing of teasles one where considerable experience is necessary. Several attempts by the inexperienced to market teasles have been made. Mr. Talcott says the result was that the other fellow got the teasles, and the man who marketed them got the experience for his pay.

So far, there has been no successful attempt on the part of growers to market their own burrs in a cooperative way. However, the Skaneateles Teazle Growers' Cooperative Association was organized in 1920. William T. Thorne, a large grower and now president of the Farm Bureau of Onondaga County, is president of the association.

Grading is Tedious Work

At the plant of the buyers, men with a lifetime experience select and grade the burrs in three general grades. The stems are trimmed to exact lengths and the different grades packed in large boxes ready for shipment to the factory. It takes an experienced eye to do this grading, as not only the size of the burr must be considered, but the most important thing to consider is the strength of the hook.

As I have observed the teazle industry at Skaneateles the last few years, it would be my advice to anyone who contemplates growing teasles to move to one of the good farms near Skaneateles. The land is well adapted to general farming. I would grow general crops for a couple of years, and from observation and study would then decide whether or not there was sufficient demand for teasles to warrant the growing of teasles. I certainly would want to see a change in the level of labor prices and the prices that are being received for the teazle burrs.

What happened to Mr. Talcott? How did he save his neck growing teasles? He made some money out of teasles, first, because he put in plenty of the hard work and hand labor that is necessary, and because a few acres of teasles fit in with a well-organized rotation of general crops that grow around Skaneateles.

1924 MEETING OF NEW YORK GRANGE IN BUFFALO

The annual meeting of the New York State Grange will be held at the Statler Hotel in Buffalo on February 5 to 8, inclusive, 1924. In securing this particular hotel for the meeting, the Executive Committee feels the Grange is particularly fortunate, for it makes it possible to hold the sessions in the Grand Ballroom and all of the committee meetings under the same roof.

Have been taking American Agriculturist for 16 years and couldn't farm without it. We are a family of nine, and all like the clean, wholesome serials you print. I think the "Valley of the Giants" splendid. If we could have moving pictures of such stories as you have in your paper, and they would be played without that unwholesome manner such as the movie actors have, then I would think them worth while. Can't you start such a movement?—G. N. Stenger, Chambersburg, Pa.

"Life Insurance Without Agents is a Distinct Public Service"

Postal Life Method Sanctioned by the United States Supreme Court

Timely Talk on a Vital Subject

(Scene: Pullman smoking compartment. Judge Kirkland and Lawyer Roberts continuing a conversation begun at dinner.)

Judge: "Well, this business of selling direct-by-mail throughout the country is surely very popular with the public."

Lawyer: "Yes, but some of my clients say that in the interest of local merchants, the States ought to find some way to check it."

Judge: "I don't see why they should check it or how they can do it. Selling merchandise is an interstate business. I can sell and you can buy in the best market wherever it is. What can a State do about it?"

Lawyer: "You're probably right, I'll admit. The States can't very well put the 'kibosh' on legitimate interstate business."

Judge: "Certainly not. The States cannot hold up arbitrarily any direct-by-mail transaction, nor can they tax life-insurance premiums thus sent by mail."

Lawyer: "How's that?"

Judge: "Policies are written for people 'direct,' all over the country, and have been for years. The United States Supreme Court has decided unanimously that life-insurance premiums on such policies are exempt from State taxes. The usual license-fees and charges also do not apply. All this helps policyholders."

Lawyer: "Oh, you refer to the Postal Life?"

Judge: "Yes, that Company hasn't any agents and never has had. United States Senator Overman, who matured one of its policies, said on the floor of the upper House of

Congress two years ago: 'It is a very strong company, and is conducting a great business in this country. They do it all by printed matter. The applicant deals direct, personally or by letter. The method is good common sense as well as sanctioned by law.'

Lawyer: "You are quite right. I

wrote the Postal once myself just to find out how the Company did business, but never followed it up."

Judge: "I go you one better; I not only wrote them, but took a policy nine or ten years ago and have carried it ever since."

Lawyer: "How's the cost?"

Judge: "Lower than in other companies for the same kind of insurance—legal reserve—and besides that they give me a free medical examination each year just so I can keep in trim."

Lawyer: "That's pretty good. You live in Idaho and deal with a New York company by mail. Did you ever look the Company up?"

Judge: "Only to know that it is chartered and licensed by New York State, whose laws are very strict, but I called on them when I was East last June. They're now in their new building on Fifth Avenue."

Lawyer: "Are they? Believe I'll write them to figure on a policy for me."

Judge: "Don't think you could do better. Life insurance without agents is a distinct public service. The point is made, and I think it is a good one, that the Company is subject to the United States Postal Authorities. The Postal simplifies the business, saves you money, safeguards your health and will treat you right in every way. I'd take another policy myself if I hadn't passed the age-limit."

9½%

Dividends Guaranteed in your Policy and the Usual Contingent Dividends Paid as Earned.

Also, the life-prolonging service of Company's Health Bureau benefits policyholders and helps to keep insurance cost down.

That tells the story. Thoughtful insurers like Judge Kirkland take policies with the Postal and not only hold on to them but are disposed to take new insurance, while those like the lawyer Roberts, who at first write out of curiosity, at last find they can save money by taking a Postal Policy and they do it.

Find Out What You Can Save

You should take advantage of Postal benefits and economies. Call upon or write to the Company, or send in the coupon

You will receive full information based on official reports regularly filed with the New York State Insurance Department. No agent will be sent to visit you. The resultant commission-savings go to you because you deal direct.

UNITED TOBACCO GROWERS MAYFIELD, KY.

Among the Fruit Growers

New York Reports Lighter Apple Crop Than 1922

THE month of May was by far the driest month of the year, and all crops in Western New York showed effects of the drouth. Only 2.13 inches precipitation were recorded at the Sodus sub-station of the Weather Bureau. The mean temperature for the month was 52.1 degrees, with a maximum reading of 83 degrees and a minimum of 27. It was a month of erratic changes, the first thunderstorm being registered on the 16th, followed by a snowstorm on the next day. Small fruits were damaged by the low temperatures, though this damage will be much less in the strip of towns facing Lake Ontario.

The canners throughout the fruit and vegetable belts of the State are making big plans on the present season, and many plants have been improved and enlarged in anticipation of the industry at last reaching a firm basis of growth, without hindrance of war, fuel or labor conditions.—A. H. P.

In Western New York

Monroe Co.—Apple trees are in full bloom. Early varieties have passed the height of bloom. On the better ground and a little back from the lake, where the season is a little in advance of the lake shore belt, late varieties, such as the Baldwins, are in full bloom. In general, the late varieties are showing good bloom. All varieties promise a shorter crop than last year. The weather has been fairly favorable for pollination, although it is a trifle cool for bees to work well.

Niagara Co.—From all indications the fruit crop will be about 50 per cent normal through this section. Young peach trees are quite heavily set, while the old trees are not so heavy. Greenings promise a light crop, Baldwins show up much better than Greenings. It looks as though the Bartlett pear crop will be short, while trees of Kieffer variety are heavily laden.

Wyoming Co.—In general, the season throughout this territory is approximately two weeks behind last year. Indications are that the pear crop will be light. Apples look good, with the exception of Baldwins, which are blooming rather light.

Ontario Co.—From all indications, the peach crop this year will be short. Greenings and Baldwins are expected to yield a fair crop, much in comparison to last year.

Seneca Co.—Frosts during the last week of May nipped early garden truck, which necessitated replanting. Very little fruit was affected. Sweet cherries suffered most. Cherry and peach growers are looking for a bumper crop this year in the Geneva section.

In the Hudson Valley

Columbia Co.—Apples, peaches and cherries are in heavy blossom, with the exception of some Baldwins. It looks as though the pear crop will be short. Frost did little or no damage north of the city of Hudson. South of the city, however, some damage was done to early apples and pears. Recent rains and cold damaged the set of pears and early apples. It is a trifle early at this date to predict with any degree of accuracy how heavy the various crops will be.

Rensselaer Co.—All varieties of apples are in full bloom with the exception of Wealthy. Last year this variety bore heavily, while this year will yield not much more than 50 per cent of a crop. Pears are rather light. Indications from the bloom promises about a 50 per cent crop of that of last year. Small fruits bloomed quite full, although they were injured to some extent by frost.

TO TEST EFFECT OF DUSTING FRUIT IN WAYNE COUNTY

The New York State College of Agriculture has stationed H. W. Fitch on the Sodus Fruit Farm, Inc., to conduct an extensive dusting and spraying experiment this season. The work will consist of experimenting with various kinds of sulphur and copper lime dust, in order to find out the best materials

to use and the best times to use them. The experiments will be tried out on peaches, sour and sweet cherries, apples, plums and prunes. In the case of the apple, the dusting will be compared with liquid, in its efficiency in controlling insects and diseases. Both large and small trees will be used. It is believed that more growers are dusting fruit in Wayne County than in any other county of the State, and this experimental work conducted by Mr. Fitch ought to be very valuable from the standpoint of the many who dust.

Last year these experiments were conducted in a Greening orchard on the farm of E. W. Catchpole & Sons, of North Rose. Dust mixtures were used at the rate of four pounds per tree and spray mixtures at the rate of seven and one-third gallons per tree. Six applications were made, with the exception of plat 2, which had seven treatments. Nicotine sulphate was used with lime-sulphur in the calyx application in plats 4 and 5, and with dust preparations for the calyx treatment of plats 2 and 3.

SUMMARY OF NORTH ROSE EXPERIMENTS

Treatment	Percentage of apples affected with scab	Percentage of apples injured by codling moth	Percentage of apples injured by red bug
Check, untreated trees..	83.94	6.00	5.27
Dust (90-10) without nicotine, six applications	47.85	5.31	1.44
Dust (90-10) with nicotine, six applications	20.65	5.68	0.00
Dust (90-10) with nicotine, seven applications	25.09	3.58	0.00
Dust (dehydrated copper sulphate) six applications	56.85	7.22	5.69
Spray (lime-sulphur) six applications	7.86	1.71	0.00
Spray (lime-sulphur) with extra lead arsenate, six applications	8.42	1.73	0.00

SPRAY RINGS YIELD DIVIDENDS

A recent release from the central office of the Western New York Co-operative Packing Association on the comparative returns of sprayed and unsprayed apples, carries a message to fruit growers that will stand considerable study.

All the local associations in the Western New York Co-operative were divided into two groups. One group embodied those associations in counties where there is a spray service. It has been found, that the growers in this group will receive a probable pool price of 55 cents more per barrel on Baldwins, tree run, and 33 cents more per barrel on Greenings, tree run, over the price received by those growers in the group of associations where no spray service was available.

A second sub-division, according to the release, was made by dividing the members of the associations where spray service was available into two groups. Those who received the service will receive approximately 17 cents more per barrel for Baldwins and 25 cents more per barrel for Greenings, than the growers in that group who did not have the service although it was available.

A third comparison was made among the growers who actually received the service. Those who received the service and really used it, in 13 associations where it was possible to get intimate knowledge of the growers, will average 25 cents more per barrel, tree run, on Baldwins and 27 cents more per barrel, tree run, on Greenings, than the average of all other growers in the same association who received the service but did not use it. The total differential therefore is on the average 97 cents per barrel on Baldwins and 85 cents per barrel on Greenings, tree run.

A clear indication of how the spray rings are operating lies in the fact that growers are voluntarily requesting that they be included in the service. It means a great deal to those men in counties where there is no spraying service. They need it. They are missing something. It means a great deal more to the man who has it, but does not use it. He is throwing opportunity away.

You'll Profit By Our Chicks **MOSS'S CHICKS**
BEST IN THE WORLD

This season has proven to be the biggest season in our history. An outstanding factor is the great number of reorders from customers of past years, which speaks most convincingly of our High Quality and Superior Service.

Promise Better Rail Service

Railroads Prepare to Move New Jersey Crops

WITH large fruit, potato and perishable vegetable crops in prospect, necessitating rapid transportation, New Jersey farmers were promised better freight service at a recent conference between marketing officials and railroad agents in Trenton, N. J. Assurance was given by representatives of the big transportation companies for more cars of proper type to move apples, peaches and truck crops from the central and southwestern sections of the State. Various cooperative associations as well as large independent growers in the State have been pressing the railroad companies for several years in order to secure a quicker distribution of highly perishable crops.

As brought out at the conference, the railroad men are urging more attention on the part of the grower to better grading and packing methods. Standard packages carefully packed with standard products carry through to destination in better condition and cut down the losses from growers' claims as well as enable the farmers to secure a more equitable price for their products.

Cooperation with the railroads in this way, officials claim, will permit a more rapid development of fast freight facilities. While weather conditions are beyond control of either shipper or transportation company, proper precaution in loading and proper equipment of the cars will do much to overcome the effect of the unfavorable weather, it was pointed out at the conference. The practice of some farmers of permitting potatoes to remain out in the sun after digging and just before loading, was condemned as a serious cause of loss in the past years.

Under the cooperative service agreement between the New Jersey marketing officials and the railroads, effort will be made to further eliminate transit delays and terminal obstacles, which have caused such troubles in recent years. Shipping-point inspection of staple fruits and vegetables instituted in New Jersey last year and very generally received by the growers, will be extended this year as fully as available personnel will permit. This inspection service is a national development of the program of standardization which New Jersey is seeking to carry out in common with other States and the Federal Government.

Officials of various farmers' markets throughout the State report considerable discussion within the year concerning the intrusion of hucksters who are competing with actual producers on these markets. Public opinion in official agricultural and marketing circles is to the point that hucksters desiring stands should be accommodated on separate markets. Consumers, when dealing in the markets at present, have no means of identifying farmers from hucksters, and housewives' leagues as well as organized growers believe that the farmers' markets should be devoted absolutely to the use of the growers themselves. The New Jersey cities, which lead in the farmers' marketing idea, require licenses for stands or space on the farmers' markets and will issue licenses only to bonafide producers.

High wages demanded by pickers in the big strawberry-producing counties of Cumberland, Atlantic, Burlington, Gloucester and Camden add 3 cents a quart to the cost of harvesting the crop which is now moving forward to markets in quantity. The cost of the quart box and the crate add another cent, while costs of transportation and marketing mean a further 1 to 3 cents cost to the producer. This means that the total cost of production and marketing is greater to strawberry growers in New Jersey this year than ever before. However, production per acre is heavy this year.

The crop of spinach this season is estimated as the biggest ever grown in the State, and takes its place among New Jersey's leading trucking crops. Rhubarb has likewise been a large crop.

The New Jersey State Board of Taxes and assessments recently announced the 1923 average tax rate at \$3.561 per

\$100 of valuation, which is the same average rate as last year. The State Tax Board will use this rate in assessing the tax against first-class railroad property and against the gross receipts of street railways, gas and electric companies.—W. H. B.

NEW JERSEY FRUIT NOTES

Mercer Co.—Apples, peaches and pears are well set with fruit. Potatoes are coming up unevenly. In general, conditions have been all that could be desired.

Sussex Co.—The amount of damage done to the peach crop by recent frosts could not be determined until the June drop is over. The buds appear to be in excellent condition.

PENNSYLVANIA FARM ACTIVITIES

The Pennsylvania State Department of Agriculture is conducting inquiries among farmers, county agents, bankers, crop correspondents, and other competent authorities in the State to determine the factors responsible for the agricultural situation in Pennsylvania. Secretary Frank P. Willits of the department is making a comprehensive survey by means of questionnaires, by which means he hopes to bring together a mass of facts and figures upon which a more comprehensive agricultural program in the State may be based.

The department is endeavoring to have at its command figures which will show the variation between farm wages and industrial wages, with which the farmer must compete in each section of the State. It is also working for information to show the comparative cost of farm machinery and equipment during the current year and in the last two Federal census years. The question of millage tax rates for county roads and school purposes in the same periods is also under consideration, while the assessed value of farm land in relation to its market value will be figured out for 1910 and 1922.

Agricultural organizations in Pennsylvania have been called upon to prevent a proposed increase by the Legislature to motor truck business. A bill was recently pending in the Legislature to this effect. It would also require drivers to buy licenses. Various hearings have already been held.

A recent survey shows that 38 per cent of the Pennsylvania farmers now have gas engines on their farms other than those used in automobiles, motor trucks or tractors. This is an increase of 4,250 gas engines reported on farms in the State within the last year; the total estimate is 78,600 gas engines now on farms.

After June 19 wholesalers and retailers can no longer manufacture, sell or exchange filled milk. The 90 days of grace allowed to dealers to dispose of stocks on hand expires on that date. The State authorities have issued a warning to this effect and signify their intention of prosecuting violators, so that the general health of consumers and the dairy industry shall receive the full protection granted under the law.

Since the filled milk legislation went into effect last year, condensed milk manufacturers have been flooding the markets with skim milk products, largely offered to the public in packages so closely resembling whole milk products as to be deceptive.

Another legislative measure of particular interest to eastern Pennsylvania growers would appropriate \$50,000 for quarantining the districts along the Delaware River which are infested by the Japanese beetle. The Pennsylvania State Horticultural Society, leading fruit growers and some of the eastern Pennsylvania farm organizations have been actively backing the measure.

If it is farm news, you will see it in the American Agriculturist.

Better Crops Less Work

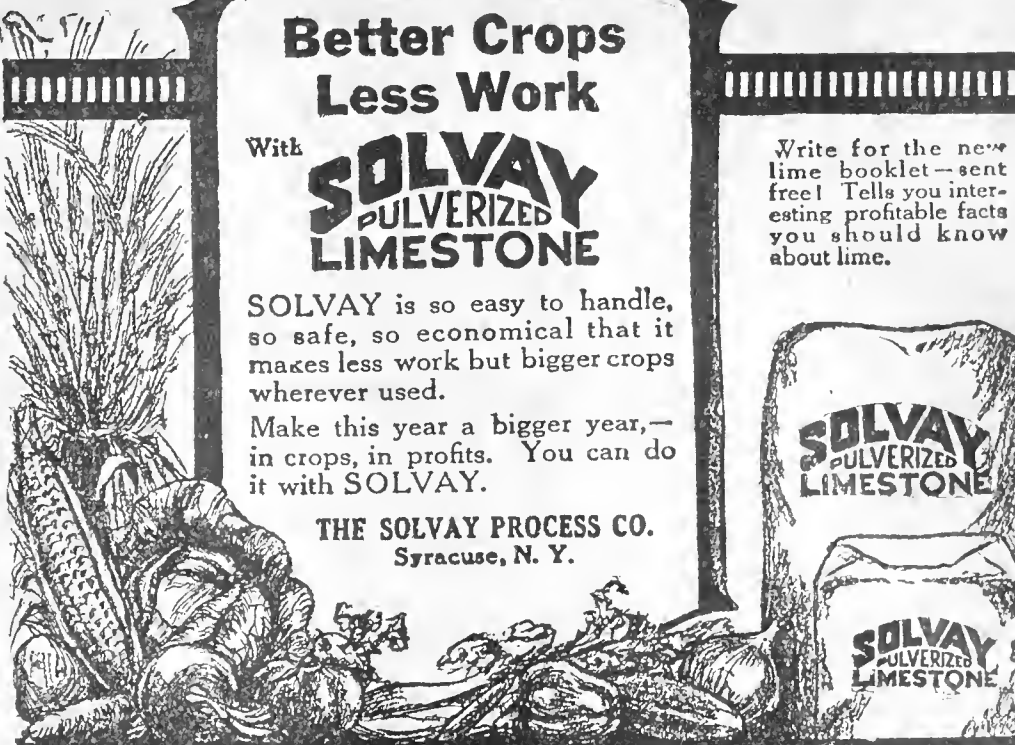

With **SOLVAY PULVERIZED LIMESTONE**

SOLVAY is so easy to handle, so safe, so economical that it makes less work but bigger crops wherever used.

Long News in Short Paragraphs

A NATIONAL Wheat Conference is called at Chicago for June 19 and 20. This conference will consist of representatives in agriculture, commerce, elevators, railroads, millers, bakers, retailers and all educational bodies connected with agriculture, together with many individuals interested in the economics of the marketing of wheat. The object of the conference is to obtain better prices for wheat by laying plans to create a larger consumers' demand. Among those calling the conference are: S. J. Lowell, Master of the National Grange; Aaron Sapiro, counsel in Agricultural Economics; O. E. Bradfute, President of the American Farm Bureau Federation; G. E. Chamberlain, United States Shipping Board; Royal S. Copeland, Senator from New York; Arthur Capper, Senator from Kansas; and the Governors of the States of Minnesota, Illinois, Kansas, Missouri, North Dakota, Ohio and Oklahoma.

Milk consumption is increasing. Milk for household purposes increased from 49 gallons per capita in 1921 to 50 gallons per capita in 1922, according to the United States Department of Agriculture. Consumption, by city folks increased 2 gallons per capita, but lack of any increase in consumption in rural communities pulled down the average increase of the country as a whole to 1 gallon. There is a big increase in the consumption of milk in chocolate form, 100,000,000 pounds of whole milk being used for this purpose in 1922, as compared with 40,000,000 pounds in 1921. There was also some increase in the consumption of other by-products made from milk.

The New York City average price for New York State average run, colored and uncolored flats, American cheese for the month of May is 22.4375 cents per pound. The average price for 92 score butter is 41.9423 cents. These prices are used by the Dairymen's League Cooperative Association in determining the prices of butter and cheese for the general pool price for May.

The price for class 3 milk for the month of May, i. e., milk used chiefly by the manufacturers of condensed and evaporated milk, will be 1.895 cents for 3 per cent milk at the 201-210 mile zone.

The number of milch cows on farms January 1, 1923, is placed at 24,429,000 as compared with 24,082,000 cows on farms January 1, 1922. There are also about 1,250,000 cows in towns, making a total of 25,505,000 milch cows producing on the average of 4,020 pounds per cow, or 103,000,000,000 pounds of milk per year. The average production per cow in 1921 was 3,945 pounds. Therefore, while there is an increase in consumption of milk and other dairy products, there is also probably a greater increase, both in the number of animals and in the production per cow.

A recent investigation of the results from hoof and mouth disease in Denmark in 1920-1921 shows that practically all milch cows reported upon had been attacked by the disease and that the death rate averaged 2.5 per cent. The biggest loss was through the large decline in milk production. The same disease attacked 86.6 per cent of the hogs of which 22.8 per cent died.

The index of purchasing power of farm products stood at 70 in April as compared with 69 in March. The high cost of producing farm crops this season on account of higher farm wages together with other factors, gives some indication that the prices of farm products will be some higher this fall.

Experiments are being conducted in the Gypsy Moth infested area in New England to determine whether or not it is practical to spray fruit and other trees from an aeroplane or balloon rather than from the ground.

Wool prices in the nation ranged during the last of May from 35c in Wyoming to 55c a pound in California. The 55c grade in California was for strictly fine combing wool.

\$1,000.00 INSURANCE FOR 50 CENTS

As a part of our broad policy of service to readers, we now offer you a \$1,000 Travel Accident Policy for one year with a three-year subscription for *American Agriculturist* all for only \$2.50—just 50 cents more than our special price for a three-year subscription alone.

You May Be Hurt or Killed In a Train or Auto Accident Tomorrow

Don't make the mistake of neglecting your family's financial welfare in case the unexpected accident comes to you. Is not your own peace of mind worth the small amount of our accident policy? You need protection. Tomorrow may be too late. Order one of these policies today.

This Tells You What the Policy Will Pay

The North American Accident Insurance Company will pay the following amounts, subject to the terms of the policy, for death or disability on a public carrier, due to its wrecking or disablement while the insured is riding as a fare-paying passenger, or due to the wrecking or disablement of any private horse-drawn or motor-driven vehicle on which insured may be riding or driving, or by being thrown therefrom.

WHEN WRITING TO ADVERTISERS BE SURE TO MENTION AMERICAN AGRICULTURIST

The Brown Mouse — By Herbert Quick

MORE interesting to a keen observer than the speeches, were the unusual things in the room itself. To be sure, there were on the blackboards exercises and outlines, of lessons in language, history, mathematics, geography and the like. But these were not the usual things taken from text-books. The problems in arithmetic were calculations as to the feeding value of various rations for live stock, records of laying hens and computation as to the excess of value in eggs produced over the cost of feed. Pinned to the wall were market reports on all sorts of farm products, and especially numerous were the statistics on the prices of cream and butter. There were files of farm papers piled about, and racks of agricultural bulletins. In one corner of the room was a typewriting machine, and in another a sewing machine. Parts of an old telephone were scattered about on the teacher's desk. A model of a piggery stood on a shelf, done in cardboard. Instead of the usual collection of text-books in the desk, there were hectograph copies of exercises, reading lessons, arithmetical tables and essays on various matters relating to agriculture, all of which were accounted for by two or three hand-made hectographs—a very fair sort of printing plant—lying on a table.

The members of the school board were there, looking on these evidences of innovation with wonder and more or less disfavor. Things were disorderly. The text-books recently adopted by the board against some popular protest had evidently been pitched, neck and crop, out of the school by the man whom Bonner had termed a dub. It was a sort of contempt for the powers that be.

Colonel Woodruff was in the chair. After the speechifying was over, and the stereotyped, though rather illogical, appeal had been made for voters of the one party to cast the straight ticket, and for those of the other faction to scratch, the colonel rose to adjourn the meeting.

Newton Bronson, safely concealed behind taller people, called out, "Jim Irwin! speech!"

There was a giggle, a slight sensation, and many voices joined in the call for the new schoolmaster.

Colonel Woodruff felt the unwisdom of ignoring the demand. Probably he relied upon Jim's discretion and expected a declination.

Jim arose, seedy and lank, and the voices ceased, save for another suppressed titter.

"I don't know," said Jim, "whether this call upon me is a joke or not. If it is, it isn't a practical one, for I can't talk. I don't care much about parties or politics. I don't know whether I'm a Democrat, a Republican or a Populist."

This caused a real sensation. The nerve of the fellow! Really, it must in justice be said, Jim was losing himself in a desire to tell his true feelings. He forgot all about Jennie and her candidacy—about everything except his real, true feelings. This proves that he was no politician.

"I don't see much in this county campaign that interests me," he went on—and Jennie Woodruff reddened, while her seasoned father covered his mouth with his hand to conceal a smile. "The politicians come out into the farming districts every campaign and get us hayseeds for anything they want. They give us clodhoppers the glad hand, a cheap cigar, and a cheaper smile after election;—and that's all. I know it, you all know it, they know it. I don't blame them so very much. The trouble is we don't ask them to do anything better. I want a new kind of rural school; but I don't see any prospect, no matter how this election goes, for any change in them. We in the Woodruff District will have to work out our own salvation. Our political ring never'll do anything but the old things. That's all—and I don't suppose I should have said as much as I have!"

There was stark silence for a moment when he sat down, and then as many cheers for Jim as for the principal speaker of the evening, cheers mingled with titters and catcalls. Jim felt a good deal as he had done when he knocked down Mr. Dilly's chauffeur—rather degraded and humiliated, as if he had made an ass of himself. And as he walked out of the door, the future county superintendent passed by him in high displeasure, and walked home with someone else.

Jim found the weather much colder than it had been while coming. He really needed an Eskimo's fur suit.

CHAPTER VII

THE NEW WINE

IN the little strip of forest which divided the sown land from the Iowa fields wandered two boys in earnest converse. From their backloads of steel-traps one of them might have been Frank Merriwell, and the other Dead-Shot Dick. However, though it was only mid-December, and the fur

of all wild varmints was at its prime, they were bringing their traps into the settlements, instead of taking them afield. "The settlements" were represented by the ruinous dwelling of the Simmses, and the boy who resembled Frank Merriwell was Raymond Simms. The other, who was much more barbarously accoutered, whose overalls were fringed, who wore a cartridge belt, and carried hatchet, revolver, and a long knife with a deerfoot handle, and who so studiously looked like Dead-Shot Dick, was our old friend Newton Bronson. On the right, on the left, a few rods would have brought the boys out upon the levels of rich corn-fields, and in sight of the long rows of soft maples along the straight roads, and of the huge red barns. But here, they could be, the Boy Trappers—a thin fringe of bushes and trees made of the little valley a forest to the imagination of the boys. Newton put down his load, and sat upon a stump to rest.

RAYMOND SIMMS was dimly conscious of a change in Newton since the day when they met and helped select Colonel Woodruff's next year's seed corn. Newton's mother had a mother's confidence that Newton was now a good boy, who had been led astray by other boys, but had reformed. Jim Irwin had a distinct feeling of optimism. Newton had quit tobacco and beer, casually stating to Jim that he was "in training." Since Jim had shown his ability to administer a knockout to that angry chauffeur, he seemed to this hobbledehoy peculiarly a proper person for athletic confidences. Newton's mind seemed gradually filling up with interests that displaced the psychological complex out of which oozed the bad stories and filthy allusion. Jim attributed much of this to the clear mountain atmosphere which surrounded Raymond Simms, the ignorant barbarian driven out of his native hills by a feud. Raymond was of the open spaces, and refused to hear fetid things that seemed out of place in them. But how could you have a fuss with a feller who knew all about trapping, who had seen a man shot, who had shot a bear, who had killed wild turkeys, who had trapped a hundred dollars' worth of furs in one winter, who knew the proper "sets" for all fur-bearing animals, and whom you liked, and who liked you?

As the reason for Newton's improvement in manner of living, Raymond, out of his own experience, would have had no hesitation in naming the school and the schoolmaster.

"I wouldn't go back on a friend," said Newton, seated on the stump with his traps at his feet.

"You got no call to talk thataway," replied the mountain boy. "How'm I goin' back on you?"

"We was goin' to trap all winter," asseverated Newton, "and next winter we were goin' up in the north woods together."

"You know," said Raymond somberly, "that we can't run any trap line and do what we got to do to he'p Mr. Jim."

Newton sat mute as one having no rejoinder.

"Mr. Jim," went on Raymond, "needs all the he'p every kid in this settlement kin give him. He's the best friend I ever had. I'm a pore ignorant boy, an' he teaches me how to do things that will make me something."

"Darn it all!" said Newton.

"You know," said Raymond, "that you'd think mahgty small of me, if I'd desert Mr. Jim Irwin."

"Well, then," replied Newton, seizing his traps and throwing them across his shoulder, "come on with the traps, and shut up! What'll we do when the school board gets Jennie Woodruff to revoke his certificate and make him quit teachin', hey?"

"Nobody'll eveh do that," said Raymond. "I'd set in the schoolhouse do' with my rifle and shoot anybody that'd come to th'ow Mr. Jim outen the school."

"Not in this country," said Newton. "This ain't a gun country."

"But it orto be either a justice kentry, or a gun kentry," replied the mountain boy. "It stands to reason it must be one 'r the otheh, Newton."

"No, it don't, neither," said Newton dogmatically.

"Why should they th'ow Mr. Jim outen the school?" inquired Raymond. "Ain't he teachin' us right?"

NEWTON explained for the tenth time that his father, Mr. Con Bonner and Mr. Haakon Peterson had not meant to hire Jim Irwin at all, but each had voted for him so that he might have one vote. Now, however, Jim had done so many things that no teacher was supposed to do, and had left undone so many things that teachers were bound by custom to perform, that Newton's father and Mr. Bonner and Mr. Peterson had made up their minds that they would call upon him to resign, and if he wouldn't, they would "turn him out" in some way. And the best way, if they could do it, would be to induce County Superintendent Woodruff, who didn't like Jim since the speech he made at the political meeting, to revoke his certificate.

"What wrong's he done committed?" asked Raymond. "I don't know what teachers air supposed to do in this kentry, but Mr. Jim seems to be the only sure-enough teacher I ever see!"

"He don't teach out of the books the school board adopted," replied Newton.

"But he makes up better lessons," urged Raymond. "An' all the things we do in school, he'ps us make a livin'."

"He begins at eight in the mornin'," said Newton, "an' he has some of us there till half past five, and comes back in the evening. And every Saturday, some of the kids are doin' something at the schoolhouse."

"They don't pay him for overtime, do they?" queried Raymond. "Well, then, they orto, instid of turnin' him out!"

"Well, they'll turn him out!" prophesied Newton. "I'm havin' more fun in school than I ever—an' that's why I'm with you on this quittin' trapping—but they'll get Jim, all right!"

"I'm having something betteh'n fun," replied Raymond. "My pap has never understood this kentry, an' we-all has had bad times hyeh; but Mr. Jim an' I have studied out how I can make a betteh livin' next year—and pap says we kin go on the way Mr. Jim says. I'll work for Colonel Woodruff a part of the time, an' pap kin make corn in the biggest field. It seems we didn't do our work right last year—an' in a couple of years, with the increase of the hawks, an' the land we kin get under plow. . . ."

RAYMOND was off on his pet dream of becoming something better than the oldest of the Simms tribe of outcasts—and Newton was subconsciously impressed by the fact that never for a moment did Raymond's plans fail to include the elevation with him of Calista and Jinnie and Buddy and Pap and Mam. It was taken for granted that the Simmses sank or swam together, whether their antagonists were poverty and ignorance, or their ancient foes, the Hobdays.

It was still an hour before nine—when the rural school traditionally "takes up"—when the boys had stored their traps in a shed at the Bronson home, and walked on to the schoolhouse. That rather scabby and weathered edifice was already humming with industry of a sort. Never had the attendance been so large or regular; and one of the reasons for sessions before

nine and after four was the inability of the teacher to attend to the needs of his charges in the five and a half hours called "school hours."

This, however, was not the sole reason. It was the new sort of work which commanded the attention of Raymond and Newton as they entered. This morning, Jim had arranged in various sorts of dishes specimens of grain and grass seeds. By each was a card bearing the name of the farm from which one of the older boys or girls had brought it. "Wheat, Scotch Fife, from the farm of Columbus Smith." "Timothy, or Herd's Grass, from the farm of A. B. Talcott." "Alsike Clover, from the farm of B. B. Hamm." Each lot was in a small cloth bag which had been made by one of the little girls as a sewing exercise; and each card had been written as a lesson in penmanship by one of the younger pupils, and contained, in addition to the data above mentioned, heads under which to enter the number of grains of the seed examined, the number which grew, the percentage of viability, the number of alien seeds of weeds and other sorts, the names of these adulterants, the weight of true and vitalized, and of foul and alien and dead seeds, the value per bushel in the local market of the seeds under test, and the real market values of the samples, after dead seeds and alien matter had been subtracted.

"Now get busy, here," cried Jim Irwin. "We're late! Raymond, you've a quick eye—you count seeds—and you, Calista, and Mary Smith—and mind, next year's crop may depend on making no mistakes!"

"Mistakes!" scoffed Mary Smith, a dumpy girl of fourteen. "We don't make mistakes any more, teacher."

IT was a frolic, rather than a task. All had come with a perfect understanding that this early attendance was quite illegal, and not to be required of them—but they came.

"Newt," suggested Jim, "get busy on the percentage problems for that second class in arithmetic."

"Sure," said Newt. "Let's see . . . Good seed is the base, and bad seed and dead seed the percentage—find the rate . . ."

"Oh, you know!" said Jim. "Make them easy and plain and as many as

WHAT HAS HAPPENED?

JIM IRWIN, a field hand by force of circumstances, but conscious of an ability he has never been able to express, is elected school teacher by a fluke. He accepts because Jennie Woodruff said "humph!" when he told her his ambitions. Jim makes friends with the Simms family, mountaineers from Tennessee, and even rounds up Newton Bronson, a village problem, whose father is a member of the school board.

Jennie is running for County Superintendent, and Jim offends her by his lack of enthusiasm.

you can get out—and be sure that you name the farm every pop!"

"Got you!" answered Newton, and in a fine frenzy went at the job of creating a text-book in arithmetic.

"Buddy," said Jim, patting the youngest Simms on the head, "you and Virginia can print the reading lessons this morning, can't you?"

"Yes, Mr. Jim," answered both McGeehee Simms and his sister cheerily. "Where's the copy?"

"Here," answered the teacher, handing each a typewritten sheet for use as the original from which the young mountaineers were to make hectograph copies, "and mind you make good copies! Bettina Hansen pretty nearly cried last night because she had to write them over so many times on the typewriter before she got them all right!"

The reading lesson was an article on corn condensed from a farm paper, and a selection from *Hiawatha*—the Indian-corn myth.

Dimes Make Dollars—So You Should Save the Dimes

Emma Gary Wallace Gives Six Ways of Saving — A Block for the Nursery Rhyme Quilt

PREPARE an efficient and inexpensive washing fluid by blending the following ingredients:

Soap, $\frac{1}{2}$ pound; sodium carbonate, 1 pound; strong water of ammonia, 8 ounces; turpentine, 4 ounces; gasoline, 8 ounces; water enough to make 2 gallons.

Home-made soft soap is excellent. If not available, take any good grade of laundry soap, shave it, and melt in sufficient water to make a jelly. Take away from light or fire and stir in the gasoline. Dissolve the sodium carbonate in three pints of water. Add the ammonia and the turpentine. Mix the two solutions and finish with enough water to make the two gallons. Store in tightly corked jugs or bottles. Label plainly, "Easy Washing Fluid."

Use a tablespoonful of this to each pail of water in soaking clothes, and two tablespoonfuls to a pail in boiling them. This Easy Washing Fluid loosens dirt, and bleaches clothes so that they are much easier to wash and whiter when finished. Many mild stains are removed by this compound.

Save on Ammonia Bills

Every housewife knows how useful the ammonia bottle is. It keeps windows sparkling and clean; is valuable in cleaning of clothes; in the weekly care of the bathroom, and in keeping cut glass sparkling and bright.

Frequently ammonia is not used as freely as it might be because of its expense. Save by preparing it yourself. The following is a very desirable mixture:

Powdered Castile soap, 8 ounces; borax, 2 ounces; strong water of ammonia, 1 pint; water enough to make 1 gallon.

Heat part of the water and dissolve the soap and borax in it. Cool. Add the rest of the water and the strong ammonia. Bottle, cork tightly and label.

Save on Silver Cleaning Cream

Use either large-sized bottles with screw tops, or fruit jars. Have plenty of the silver-cleaning mixture on hand, and whenever a piece shows tarnish, clean it at once. This is easy if there is plenty of Cleaning Cream on hand, and a box in a convenient corner containing soft cloths and a polishing chamois.

Powdered whiting (sift if necessary), 2 ounces; precipitated chalk, 2 ounces; powdered Castile soap, 1 ounce; strong ammonia water, 2 ounces; spirits of camphor, 4 drams; water enough to make 1 pint.

Sift whiting and chalk together. Dissolve soap in some of the water. Stir in ammonia, and little by little, add whiting and chalk. Beat until perfectly smooth and well blended, adding the rest of the water as necessary. Lastly, stir in spirits of camphor. Keep covered to avoid evaporation.

A very little of this applied with a soft cloth will keep the silver bright. Remove the cream by washing with hot water, to which a few drops of

household ammonia have been added. Dry with a soft cloth and polish with a chamois.

Save on Library Paste

Then there are children who delight to paste, or a housewife who likes to make scrap books, a wide-mouthed jar holding a pound or more may be obtained at the drug store. This should have a screw top.

The following Library Paste will keep sweet and smooth:

Cornstarch, 6 ounces; flour, 4 ounces; glycerine, 2 drams; salicylic acid, 2 drams; water, 1 quart; oil of cloves, 1 dram.

Blend the starch, the flour, and the salicylic acid together. Take enough of the water to stir into a smooth paste. Rub out all the lumps. Add the glycerine. Heat the rest of the water boiling hot and pour gradually upon the flour mass, stirring as it is added. Put over the fire and cook until smooth and thick. Be careful that it does not burn. Cook at least fifteen minutes or longer if a double boiler is used. Cool and add the oil of cloves. Stir in thoroughly. This will make about a quart of fine, smooth paste. Put part of it aside in a tightly covered receptacle in a cool place.

Save on Insect Depredations

If ants become troublesome, take one-half pound of borax, one-half ounce of powdered camphor, and one ounce of cloves. Mix by sifting together and

scatter round their haunts. The drug-gist can powder the camphor by breaking it into small pieces and rubbing with a few drops of alcohol. This process cuts the gum.

Watch where the insects enter, for there is sure to be an opening or crack in floor or wall, and scatter the mixture about the entrance. Spirits of turpentine poured into such a crevice will help to drive them away.

If the ant colony can be located, it can be destroyed by pouring a kettle of boiling water over it, to which a handful of alum has been added, or the ant hill may be liberally sprinkled with powdered quicklime.

Save on Your Nutmeat Supplies

Where the family is fond of nut bread, nut salads, and such dishes, it is much cheaper to buy the nuts several pounds at a time. These should be kept in an air-tight container. Even so, parasites will sometimes infest the nutmeats, wasting quantities. Of course, if there are any eggs, they will hatch.

To keep the nutmeats free and fresh, take absorbent cotton about the size of a small walnut. Moisten with chloroform and lay this on a small piece of clean paper on top of the nutmeats. Close the cover and they will remain in the best of condition until used up.

Save on Rug Cleaning Bills

Mix one pint of ammonia water, or household ammonia, four ounces of de-

natured alcohol, two ounces of turpentine, and a pint of water. This will make 22 ounces of the carpet-cleaning fluid. Into each five-quart pail of hot water, put four ounces, or half a measuring cup of the fluid. Clean a square of the carpet, using a brush or clean cloth. Wipe dry with a second clean cloth. Change the water as often as it is soiled. Do not walk on the carpet or rug until dry. Before cleaning, the fabric should be swept, vacuumed, or beaten to remove the loose dust.

THE NURSERY QUILT

Here is one square from the nursery rhyme quilt which may be made, square by square, by the A. A. Baby's mother (or sister or aunt) for the A. A. Baby's bed. Make it of muslin or soft muller, and it will be just the thing to throw over the youngest one during warm weather.

Transfer patterns come for twenty pictures. You stamp each picture on its own square with a hot iron, then, when all are embroidered, sew them together, or mount them on a background of cambric, lawn or any washable, wearable material.

The whole set of twenty transfers costs only 65c. The transfer patterns, to save expense, are in three large sheets, but can easily be cut apart. Rhymes go with the patterns, so that the children can learn them as you work the simple outlines.

The blocks represent, in their proper order, Mary and her Lamb; Hey diddle, diddle; See-saw; the Old Woman in a Basket; the Crooked Man; Barber, Barber; Queen of Hearts; Song of Sixpence; Primrose Hill; Tommy Tucker; The Piper's Son; Polly, Put the Kettle On; Ding-Dong Dell; Simple Simon; Three Blind Mice; Taffy; Goosey Gander; Curly Locks; A Dillar, A Dollar, and Blow, Wind, Blow.

Send 65c for the set to Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

WASH BEFORE YOU SEW

To tell how much a piece of material will shrink in laundering, use a piece about 3 or 4 inches square. Lay it on a paper and mark around it close to the edge. Then wash the square in warm, soapy water and hang it up to dry. Smooth it out as it dries. When it is dry place it on the picture you marked of it before and again draw around it. You can now see how much it has lost in the washing. You can tell, too, whether or not there was much sizing or starch in your piece. If it is much thinner and looser than before washing it would not be good material to use for a dress or other garment.

One small pane of window glass will keep pages of the cook book clean.

NURSERY RHYME QUILT, BLOCK NUMBER 1

Mary had a little lamb
Its fleece was white as snow;

And every place that Mary went,
The lamb was sure to go.

Here's Mary, going to school, books under her arm. The lamb is so close behind that when Mary gets to be a quilt block, Mr. Lamb will be on too. You know, "every place that Mary went,"—so here they both go onto a muslin block to start that new quilt.

Mary and her lamb, together with the nineteen other blocks representing favorite nursery rhymes, are easily transferred from the patterns onto muslin blocks, and thus make a light, pretty quilt. The entire set, together with the rhymes for each, sells for only 65c.

Money Making Schemes That Work

Our Weekly Patterns—Cooking Suggestions—A Word For Mothers

If you are an expert at crochet, why not place an "ad" in your local paper to that effect, stating your prices. A friend of mine who sells all kinds of crochet work has more orders than she can fill.

I live 80 miles from St. Louis; and this year, all the fresh eggs I have will go to private customers at 70 cents per dozen. I ship them in metal egg crates. The postage is six cents on a dozen eggs, within the first and second zones.

Just now my neighbors are receiving only thirty cents, and last summer, I actually received twelve cents. But never again! A neighbor of mine keeps pure-bred Rhode Island Red chickens. Last summer, she advertised her eggs for hatching purposes, at 75 cents for fifteen and some people actually ordered thirty dozen at a time. Her hens didn't lay fast enough to supply the demand. Pure bred poultry pays. This year, I am planning to raise pure-bred Rhode Island Red chickens and Narragansett Turkeys. Instead of selling either on the local market, it is my intention to advertise the young, as breeding stock, this fall.

Another money making scheme of mine, is the addressing of envelopes at home. The firm furnishes me envelopes and circulars. I mail them out, (postage only 1 cent) and I receive fifty cents on each order sent the firm, if the order has my name and address attached to the coupon that is on each blank.

Quilts are a Source of Revenue

I have an aunt who quilts in her spare time and she tells me she has more work than she has time to do. The customer furnishes the material, and she charges \$2.50 per spool used. The usual cost is \$5.00 as it takes about two spools of thread to make up the quilt.

Another lady, in an adjoining community is known as the "Home Nurse". She takes charge of maternity cases only and she comes one week before confinement and stays two weeks after. She does all the cooking, the house and laundry work, and looks after the mother and baby for a stated sum each week.

One of the high school girls here

exhibited some fudge at the community fair this fall and it won first prize. During the holidays, she made and sold over one hundred and fifty pounds, at thirty cents a pound. Another neighbor of mine with a large family of boys, picked and sold over 100 gallons of blackberries at 50 cents per gallon for private town customers. The boys picked the berries and she delivered them.—PAULINE CARMEN.

TEST RUBBERS FOR CANNING

Old or poor canning rubbers can be detected, according to the specialists at Ithaca, and fruit and vegetables thus saved from spoiling, by two simple tests. Poor rubbers spoil more canned stuff than any other one cause, they say.

A good can rubber returns to its original shape after it has been stretched out by pulling like a rubber band. Neither will good live rubbers crack when they are folded double into the shape of a half circle.

Don't use any rubbers that won't withstand these tests for your fruits and vegetables if you expect them to keep well.

"HALF A MIND"

HELEN GREGG GREEN

We have all of us known the undecided mother, who first forbids her child to do something, and then yields to his pleadings. There is another sort too, who sees her child's fault, and often sighs. "I have half a mind to punish him severely for that"—but never does.

Half a mind! Therein lies the trouble with many mothers. When you're a half-a-mind mother, your children soon find it out and when they discover the fact, how your discipline will suffer!

What the Children Think of It

I recently overheard several boys talking. "Come on, let's go in swimming," James coaxed. Eddie grinned but shook his head, "Can't. Sorry! But Mom said, Not to-day."

"Aw shucks, Eddie, come on! Your

mother'll forget. Mine usually does. Half the time she doesn't mean it."

"No, my mother won't," Eddie answered firmly. "She doesn't lay down the law very often, but believe me, Bo, when she does, she means it!"

"Oh well, I'm going. My mother said she would spank me if I did, but she won't. At least," hesitatingly, "I don't think she will. Sometimes she means what she says, and sometimes she doesn't." And off James shambled.

What a contrast between the mothers of these two boys, and how much better the effect of firmness.

I don't believe in nagging children; and I don't believe in giving perfunctory orders and rebukes every few minutes. But I most firmly do believe in meaning what you say, and having a good mind of your own.

Occasionally you will change your mind about something. In that case it is wise to explain to your boy or girl just why you did so. Your children will respect you more, and you will be a more successful parent if you are not the vacillating, half-a-mind type.

Crystallized Strawberries

Select the finest berries. Beat the whites of three eggs to a stiff froth; lay the fruit in the beaten egg and drain. Then beat again the part that drips off. Dip the berries one by one in finely powdered sugar and lay on a paper in a pan and place in a cool oven. When the icing is firm, pile on a plate and put in a cool place until served.—MRS. GEORGE GRAY.

Too Little Shortening

If your "sample" reveals the fact that you have not put enough shortening in your cookies, you may remedy the deficit by allowing plenty of melted shortening in the pan and turning the cookies over as you place them in it. By this method the danger of too much handling of your dough is avoided.—MRS. JOHN LAND.

The Brown Mouse

(Continued from page 511)

"We'll be careful, Mr. Jim," said Buddy.

Half past eight, and only half an hour until school would officially be called.

Newton Bronson was writing in aniline ink for the hectographs, such problems as these:

"If Mr. Ezra Bronson's seed wheat carries in each 250 grains, ten cockle grains, fifteen rye grains, twenty fox-tail seeds, three iron-weed seeds, two wild oats grains, twenty-seven wild buckwheat seeds, one wild morning-glory seed, and eighteen lamb's quarter seeds, what percentage of the seeds sown is wheat, and what foul seed?"

"If in each 250 grains of wheat in Mr. Bronson's bins, 30 are cracked, dead or otherwise not capable of sprouting, what per cent of the seed sown will grow?"

"If the foul seed and dead wheat amount to one-eighth by weight of the mass, what did Mr. Bronson pay per bushel for the good wheat, if it cost him \$1.10 in the bin, and what per cent did he lose by the adulterations and the poor wheat?"

Jim ran over these rapidly. "Your mathematics is good, Newton," said the schoolmaster, "but if you expect to pass in penmanship, you'll have to take more pains."

"How about the grammar?" asked Newton. "The writing is pretty bad, I'll own up."

Opportunity Calls from CANADA

Visit Canada this summer—see for yourself the opportunities which Canada offers to both labor and capital—rich, fertile, virgin prairie land, near railways and towns, at \$15 to \$20 an acre—long terms if desired. Wheat crops last year the biggest in history; dairying and hogs pay well; mixed farming rapidly increasing.

Homeseekers' Rates on Canadian Railroads

If you wish to look over the country with a view to taking up land get an order from the nearest Canadian Government Agent for special rates on Canadian railroads. Make this your summer outing—Canada welcomes tourists—no passports required—have a great trip and see with your own eyes the opportunities that await you.

TO KEEP YOUR NEEDLE BUSY THESE JUNE DAYS

1713

THE woman of mature or full figure could not select a better style than **No. 1713** for house or porch wear. The neck line, pockets, cuffs and fitted belt all help to give slenderizing lines. **No. 1713** cuts in sizes 36, 38, 40, 42, 44 and 46 inches. Size 36 requires 3¾ yards of 36-inch material with ¾ yard contrasting and ¾ yards binding. **Price 12c.**

1711

THE diagram shows you how simple **No. 1772** is to make. A printed overblouse of cool voile or tub silk would be ideal in this style for everyday summer wear, or better use. Only 1½ yards of 36-inch material will be needed for the medium size. **No. 1772** cuts in sizes 16 years, 36, 38, 40 and 42 inches bust measure. **Price 12c.**

1772

ANOTHER pretty overblouse to wear with your suit, or with one of the pleated skirts, now all the rage. **No. 1711** is also economical to make, taking 1¾ yards of 36-inch material for the medium size. **No. 1711** cuts in sizes 16 years, 36 and 40 inches bust measure. **Price 12c.**

1703

AN easy-to-make dress for summer wear is **No. 1703**, one of the popular long-waisted frocks which appear in all materials this year, but are especially appropriate for cottons. **No. 1703** comes in sizes 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3¾ yards of 36-inch material with ¾ yard of contrasting. **Price 12c.**

To Order: Enclose correct amount (preferably in stamps). Write name, address, and numbers clearly, and send to Fashion Department, American Agriculturist, 461 Fourth Avenue, New York City.

The summer catalogue is ready and from its attractive front cover in colors to the back page, it contains fascinating designs for all the family. Only 10c! Get your copy before they are all gone.

Reviewing the Latest Eastern Markets and Prices

NEARBY VEGETABLES MORE PLENTIFUL

HERSCHEL H. JONES

SUPPLIES of fresh, green vegetables from Long Island and other nearby trucking sections are becoming increasingly plentiful in the New York farmers' markets. Lettuce, romaine and spinach constitute the bulk of present offerings, but a variety of other vegetables are included. Following were the farmer's market wholesale prices on June 7:

ASPARAGUS—Per dozen bunches, white, prime, best, \$2.50 @ 2.75; fancy, few sales, \$3; culls, \$1 @ 1.25. BEETS—Per bunch, 7 @ 10c. BEET TOPS—Per crate (32 qts.), best, \$1 @ 1.25; ordinary, 50 @ 75c. CARROTS—Per bunch, 5 @ 6c; fancy, large, 7 @ 8c. DILL—Small, per bunch, 1 @ 1½c. KOHLRABI—Per bunch, 4 @ 5c; fancy, large, 6c. LEEKS—Per bunch, best, 2¼ @ 3c; fancy, large, 2½ @ 4c; small, 2 @ 2½c. LETTUCE—Per slat barrel, best, \$1.75 @ 2; fancy, \$2.25 @ 2.50; fair, \$1.25 @ 1.50; crates (32 qts.), best, \$1 @ 1.25; fancy, \$1.50; fair, 50 @ 75c. ONIONS—Spring, per bunch, best, 2¼ @ 2½c; fancy, young, 2¾ @ 3c. PARSLEY—Per bunch, curly, 2 @ 2½c. RADISHES—Per bunch, 2 @ 2½c; fancy, 2¼ @ 3c; ordinary, 1½c; white tip, 1½ @ 2c; fancy, 2¼ @ 2½c; white radishes, 2 @ 4c. RHUBARB—Per bunch, 2 @ 2½c; large, 2¼ @ 3c; fancy, few sales, 3½ @ 4c. ROMAINE—Per crate, best, \$1; fancy, large, \$1.25; small, 50 @ 75c; per slat barrel, \$1.25 @ 1.50; fancy, large, \$1.75 @ 2; ordinary, \$1. SPINACH—Crates (32 qts.), 50 @ 75c. SPROUTS—Per slat barrel, 75c @ \$1. WHITE TURNIPS—Per bunch, 3 @ 4c; few sales, 5c.

New Jersey lettuce in crates of 24 to 30 heads sold at \$1.25 to \$2 per crate. The first shipment of lettuce from Chester, Orange County, N. Y., received by truck last week, was of ordinary quality, leafy and not well bleached. It sold at \$1.50 per crate of 24.

VEGETABLES IN BUFFALO

Supplies of nearby grown new vegetables in the Buffalo market are limited chiefly to lettuce, green onions, radishes, rhubarb, spinach and asparagus. Mt. Morris asparagus sold there at \$4 to \$4.50 per doz. bunches and 75c to \$1 per bu. Homegrown red radishes, 15 @ 20c per doz. bunches; rhubarb, 25 @ 40c per doz. bunches; spinach, 40 @ 65c. bu.

STATE BERRIES COMING IN

Strawberries from Milton, N. Y., Ulster County and other nearby State sections first appeared in the New York market last week. The first Ulster berries sold at 15 to 25c per qt. The first Long Island berries brought 22c per qt. Germantown berries are expected about the middle of June.

Warm weather caused a wide range in quality of receipts, most of which came from New Jersey and Maryland. Poor berries sold as low as 8c per qt., but the market for fancy continued good at prices as high as 26 to 30c.

NEW POTATOES IN DEMAND

South Carolina continues to be the largest source for new potatoes, with over 150 cars being shipped daily to consuming centers throughout the country. In New York City there is a good demand for carefully graded new potatoes properly packed of the right quality. Prices range from \$5.50 to \$6.50 per bbl. for fancy cobbles, poorer \$5 down, depending upon their condition.

WHITE EGG MARKET WEAK

The receipts of nearby white eggs continued considerable in excess of active demand last week. There is much more than enough to supply current needs and a decrease in the willingness of dealers to purchase for storage purposes is evident. The average ordinary qualities of nearby eggs are moving very slowly, and dealers generally seem willing to accept relatively low prices. The greater part of the miscellaneous receipts of small shipments were offered at a range of 28 to 32c, and the tendency toward the end of the week was for these average qualities not to exceed 29c, for the poorer qualities,

lower. The latter part of last week Vineland shippers' eggs of extra quality could be had at 36 to 37c, and locally graded New Jersey eggs were offered at the same range.

In the four principal markets of the country, the U. S. Department of Agriculture reported 3,549,642 cases of eggs on hand in cold storage, June 7, compared with 4,015,333 on the same date last year. The quantity of eggs in storage in New York City at this time exceeds storage stocks last year on the same date by over 3,500 cases, but the storage stocks in Chicago are considerably lighter now than at the same time last year. The U. S. report for storage egg stocks in the entire country June 1 shows 243,000 cases less this year than last. The accumulations of eggs in warehouses have been gradually approaching the unprecedented quantity stored last year. The feeling has been growing, therefore, that a larger part of the current production during the remaining period, and abnormal surplus

ers immediately preceding the July 4, holiday.

Express fowls sold at 23 to 24c per lb.

LIGHT DEMAND FOR CALVES

Calves both live and country dressed were weak and sold at irregular prices, due to hot weather. Dressed calves deteriorated rapidly and to be sold at any price. Live calves dropped to \$7.50 @ 10 per cwt. for common to medium, and \$11.25 @ 11.50 for prime. Spring lambs, live, sold June 7, per cwt., at: prime, \$16.50 @ 16.75; common to good, \$12 @ 16.25; culls, \$10.50 @ 11.50.

HAY MARKET DULL

There was very little change in New York Hay Market last week. Prices continue about the same with the usual shortage of No. 1 hay and liberal supply of all grades of No. 2 down. Boat receipts have added to the supply of undergrades and these have moved very slowly. The reports from principal hay

\$1.02½; No. 2 mixed, \$1.02; oats, No. 2 white, 56c; No. 3 white, 54 @ 54½c; ordinary white clipped, 53½ @ 54½c.

Chicago: Wheat, No. 2 hard, \$1.11; corn, No. 2 white, 84 @ 84½c; No. 1 yellow, 85c; No. 2 yellow, 85 @ 85½c; oats, No. 1 white, 45¼ @ 45½c; No. 2 white, 45 @ 45½c; No. 3 white, 43½ @ 45½c; No. 4 white, 43¼ @ 44c; rye, 70½c; barley, 60 @ 68c.

MAPLE SYRUP MARKET SLOW

With warmer weather, the demand for maple syrup has become very slight. Commission sales at Buffalo are quoted at \$1.50 to 1.75 per gal. for syrup and 16 @ 18c lb. for light sugar and 10 @ 13c lb. for dark. N. Y. City quotations in wholesale market are \$1.65 @ 2 per gal. for best syrup and 20 @ 25c lb. on sugar in 1 lb. cakes.

RICHMOND, VA. GETS 1924 HOLSTEIN CONVENTION

"The annual meeting of the Holstein-Friesian Association of America held at Cleveland on June 6 showed the best spirit and was surrounded by the best atmosphere that I have ever seen at the national meeting," writes M. C. Bond, Secretary of the New York State Holstein-Friesian Association.

All of the officers of the association were reelected. The four directors whose terms of office expired this year were reelected. Judge Peasely of Connecticut was elected to take the place of W. D. Davidson of Avon, Pa., whose term expires in 1926.

At a meeting of the Board of Directors, the resignation of E. C. Schroeder of Minnesota was accepted. R. E. Chapin of Batavia, N. Y., was elected to take his place. Mr. Chapin is a director of the New York State Association, and is an enthusiastic worker for Holsteins, and, in fact, any progress in the dairy industry. Mr. Chapin owns a large herd, headed by the great bull, Colantha Johanna Lad VIII. With the appointment of Mr. Chapin, New York now has three members on the Board of Directors, the other members being H. B. Noyes of Kenwood and D. L. Armstrong of Watertown.

Battle Creek, Mich.; Des Moines, Ia., and Richmond, Va., competed for the 1924 convention. After considerable discussion Michigan withdrew and a vote of the delegates showed Richmond the choice. Therefore the 1924 meeting will be held in Virginia.

Approximately 500 attended the banquet. One of the features of the entertainment at the banquet was the new film developed by the Extension Service of the National Association on Cow Testing Association work.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on June 7:

Eggs, Nearbys (cents per dozen)

	New York	Buffalo	Phila.
New Jersey hennerly whites uncandled, extras...	38 @ 40
Other hennerly whites, extras.....	36 @ 37
Extra firsts.....	30 @ 32	28 @ 29	28
Firsts.....	28 @ 29	25
Gathered, whites, first to extra firsts.....	28 @ 31
Lower grades.....	26½ @ 27½
Hennery browns, extras.....	33 @ 35
Gathered browns and mixed colors, extras.....	29 @ 32	27 @ 28
Pullets No. 1.....	27 @ 29

Butter (cents per pound)

	New York	Buffalo	Phila.
Creamery (salted) high score.....	39¼ @ 39¾	42 @ 43
Extra (92 score).....	38½ @ 38¾	40 @ 41	39
State dairy (salted), finest.....	38 @ 38½	39 @ 40
Good to prime.....	37 @ 37½	32 @ 38

Hay and Straw, Large Bales (per ton)

	U. S. Grades	Old Grade Standards
Timothy No. 2.....	\$24 @ 25	\$20 @ 21
Timothy No. 3.....	21 @ 23	19 @ 20
Timothy Sample.....	13 @ 18
Fancy light clover mixed.....	25 @ 26	21 @ 22
Alfalfa, second cutting.....	28 @ 29
Oat straw No. 1.....	10	15.50 @ 16

Live Poultry, Express Lots (cents per lb.)

	New York	Buffalo	Phila.
Fowls, colored fancy, heavy.....	24 @ 25	26 @ 27	27 @ 28
Fowls, leghorns and poor.....	24 @ 25	25 @ 26
Broilers, colored fancy.....	50 @ 55	45	56 @ 58
Broilers, leghorn.....	35 @ 45	38

Live Stock (cents per pound)

	New York	Buffalo	Phila.
Calves, good to medium.....	9 @ 11	4 @ 11
Bulls, common to good.....	4 @ 4¾
Lambs, common to good.....	10 @ 14	10 @ 17
Sheep, common to good ewes.....	3 @ 5½
Hogs, Yorkers.....	7½ @ 7¾	7¾

should be forced into current consumption. To accomplish this, prices would have to be lower and a publicity campaign carried on among consumers to stimulate a larger demand. Producers should seek as far as possible to increase consumption in their own local communities.

DAIRY PRODUCTS STEADY

In spite of considerably increased receipts of butter and an increasing supply of cheese, the wholesale prices for these products continue on a high level. The butter storage season is now in full swing. Nearly 1,000,000 lbs. were put into local warehouses last week, and the movement to cold storage is at the rate of 200,000 to 300,000 lbs. per day. The quality is excellent, but speculative buyers are inclined to buy moderately in expectation of declines.

Creamery extras, 92 score, continued at 38½ to 38¾c per lb., the same price quoted last week, compared with 35 to 35½c per lb. on the same date last year.

American cheese, State whole milk flats, fresh average run, continue at 22½c per lb., and held, average run, at 28 to 28½c, compared with prices on the same date last year of 17½ to 18c for fresh average run.

BROILERS HIGH—FOWLS LOW

The hot weather last week reduced the demand for fowls, but caused an active market for broilers. In spite of liberal supply of express broilers they sold well at steady prices. Colored extra large, 55c; colored average 50 @ 52c; colored small 45 @ 48c; White Leghorn fancy large 48 @ 50c; White Leghorn average 40 @ 45c; White Leghorn small 25 @ 35c. There is always an especially strong demand for broil-

producing counties up-State are unfavorable for the new crop and consequently there is some tendency to hold the old crop hay.

NEW STATE REPORT ON FEEDS

Dairymen and poultrymen will be interested to know that the State Department of Farms and Markets began last week issuing a new weekly market letter on grain and feeds, which will be sent free to any farmer on application to the Department at Albany.

This new report translates primary market quotations into delivered prices per bushel or ton in various freight zones centering around Albany, Ogdensburg, Utica and Rochester, Syracuse and Buffalo.

With such information the farmer can check fairly accurately the prices charged him by his local feed dealer. A similar report is issued twice weekly in New Jersey by the New Jersey State Department of Agriculture at Trenton, giving quotations for various groups of shipping points in New Jersey. The New Jersey report is also sent free of charge on application.

The publication of such complete information as is contained in these State reports is impossible to the limited space available on this page. We, therefore, suggest that our readers apply to their respective State Departments for these reports.

The tendency in future prices of grain has been downward during the last two weeks. The market for feeds has been very dull; linseed meal and cottonseed meal were weak.

CASH GRAIN QUOTATIONS

Cash grain quotations June 7 were as follows:

A Problem for the Women

Brought Out at Egg Meeting Conference at Chicago

FARM women are to have a part in the cooperative marketing movement. A conference to consider the marketing of eggs, the production of which has largely been in the hands of the farm wives, which was called by the cooperative marketing department of the American Farm Bureau Federation, was held May 28 in the Hotel Sherman, Chicago. Representatives from farm bureaus, extension service and home economic departments of agricultural colleges and State bureaus of markets of Illinois, Indiana, Michigan, New Jersey, New York, Iowa, Utah, Missouri, Alabama, Tennessee, Kentucky and Texas were present.

Recognizing the fact that the meeting held especial interest to the farm women, Mrs. W. C. Martin, chairman of the Home and Community Committee of the American Farm Bureau Federation, was nominated as chairman of the conference.

Too Long Considered Trivial

That the egg and poultry industry has too long been considered one of the trivial sources of farm income was the opinion of Mr. Walton Peteet, Director of Cooperative Marketing of the American Farm Bureau Federation, who opened the meeting.

Aaron Sapiro, cooperative counsel of the Farm Bureau, who has had a large share in the organization of the Pacific Coast egg marketing associations, told of the results accomplished by those organizations. With \$10,000 capital and the owners of a million hens signed up for a period of three years, the farmers of Petaluma Valley, California, organized their cooperative marketing association. Almost to a man these growers had commercial flocks of White Leghorns, so that the standardization of flocks was unnecessary. The breeding of chicks was left to the few men who specialized in that line. The cooperative insisted that infertile eggs be produced, that regular collections and deliveries be made, that perfect grading be done, that attention be paid to the pack and that facilities for storing eggs during flush seasons be made available. The association deducts one cent a dozen for purchasing capital stock, plus the selling costs.

The association has extended its market across the continent to New York City, where Pacific Coast eggs have created a demand which pays a premium of from 2 to 4 cents a dozen over other fresh firsts in the market. This is in spite of the fact that Pacific Coast eggs are from 16 to 18 days old when they reach Eastern consumers. Because of the perfect grading and the reputation for fresh infertile eggs which they take care to retain, the trade is willing to pay that premium.

Denmark Represented

How Denmark, which has the oldest cooperative marketing associations, has met the problem of marketing eggs was discussed by Mr. C. L. Christenson, of the Bureau of Agricultural Economics, Washington, who has been studying cooperative marketing in Denmark for the last two years. Twenty per cent of the egg producers in that country are members of the marketing organization. They sign a contract with local organizations to deliver all their eggs to the organization for a period of years, and the locals have like contracts with the national organization which markets the deliveries. Most of the flocks are small ones of 75 to 150 hens, and the bulk of egg production comes from these small owners. During the last forty years Denmark has increased its egg exports eighteen times, until now it furnishes 45 per cent of the total egg imports of the British Isles.

In Missouri the Farmers' Association there has been marketing eggs cooperatively for five years, according to H. A. Cowden, of that organization. Their farmers are not on contract, but because of the better prices the association is able to get for the eggs, it has experienced little difficulty in getting eggs to sell. Educational campaigns on the commercial advantages of standardized flocks have been made possible by State appropriations and

have aided the movement considerably. There are at present 7,000 members, and last year 2,000 carloads of eggs were handled by the association, an increase of 50 per cent over the year previous. Eight cold storage plants are maintained, so that all eggs are not dumped on the market during the spring flush season. Markets have been extended until now Missouri eggs are sold on both coasts.

The New Jersey Co-op

How a different kind of problem was solved by the New Jersey Cooperative Marketing Association was told by Mr. J. Wetsel, President of the Atlantic Coast Association, which has been in operation over a year. Each member paid a membership fee of \$10 plus 10 cents per bird as working capital. Most of the flocks were commercial ones of White Leghorns, so that the product is fairly well standardized. A sales manager with offices in New York City handles the merchandising of the eggs which are sold to both wholesalers and retailers under the brand name of Jersey Laid. A selling cost of 2 cents per dozen is paid by the members.

With so many summer resorts and a special hotel trade available to the farmers, it often happened that they could get better prices for their eggs by selling them themselves than by selling through the pool. They are allowed to do this if they continue to pay their share of the overhead, the 2 cents per dozen. This open-pool method has kept the members satisfied as probably no other method would have done.

The New York Survey

Prof. James E. Rice, of the poultry department of the New York State College of Agriculture, told of a survey which is being conducted in New York State to see just what they have to work with. Not only commercial flocks, but every small farm flock is being included in the survey.

"One of the most important things we have learned about cooperative marketing is that we should proceed cautiously and base our procedure on known facts," said Mr. Rice. "This means that before organization for selling there should be organization for knowledge, i. e., to make a thorough study of the production and marketing situation in all states by poultry surveys. These will locate the sources of production and distribution, and will enable us to plan our campaigns on conservative lines. We may make greater speed by first thoroughly mapping out our course."

Recommendations that a general committee be selected to work out a plan for the marketing of eggs which would take into consideration the special needs of any particular State or section; which would provide for local organization among owners of hens with State federation of these local organizations and a coordination between the State organizations in the marketing of eggs were approved by the conference. State organization committees are to be selected under whose direction campaigns to secure the support of the farmers and their families of this movement will be conducted. It was recommended that inasmuch as the marketing of eggs has heretofore been left, in a majority of cases, to the control of the women members of the farm families, that the women be given a dominant part in these campaigns.

Possibilities are Enormous

As pointed out by Mr. Peteet, there are no industries connected with agriculture which can compare with the possibilities of the egg industry. Successful cooperative egg marketing must be built upon quality and upon finding markets where there is both the demand for and the willingness to pay for that quality. In the majority of homes, where it has been the egg money, the pin money of the farmer's wife, which has bought the many little home comforts and conveniences, the egg marketing problem is a problem for the farm women to help solve. Women have watched the big crops of the farm organized for marketing. Their crop is next.

Crisp in the Cream

THE delicious crispness of Post Toasties lasts after cream or milk is added. That's one of the reasons why everybody prefers *them*.

A special "body" and texture, exceptional crispness, and their own never-forgotten flavor make Post Toasties distinctive. That's why they are called Post Toasties, not just "corn flakes."

Ready to serve in a moment, no cooking, no preparation—a splendid source of energy-giving nourishment. A serving usually costs less than a cent.

Be sure you get Post Toasties. A distinctive food—with a distinctive name—in the distinctive Yellow and Red package.

Post Toasties Improved CORN FLAKES

Made by Postum Cereal Company, Inc.

Long-Time Farm Loans

This Bank has loaned to the farmers in New England, New York and New Jersey over \$25,000,000 and has returned to them over \$137,000 in dividends.

If you operate your own farm or intend to purchase a farm, we are prepared to make a long-time, easy-payment loan. Interest at 5½%. Payments semi-annually. Loans run for 33 years but can be paid at borrowers' option any time after 5 years. Local representative in every district.

Look ahead! If you will need a loan this season write now for information.

The FEDERAL LAND BANK of SPRINGFIELD, MASS.

Serving New England, New York and New Jersey

NEW PERFECTION

Oil Cook Stoves and Ovens with SUPERFEX Burners

THIS is the famous new oil range that has revolutionized cooking with that ideal fuel—kerosene. The double-barreled, double-draft Superfex Burners make cooking with kerosene more economical than ever and give you the cooking speed that could formerly be obtained only with gas.

This latest New Perfection has already been installed in thousands of city houses and tens of thousands of country homes—and it was unknown a year ago. It is unquestionably the ideal cooking range for all kitchens today.

No range can compare with it for convenience and cooking satisfaction. Every last bit of kerosene it burns is turned into intense heat—there isn't an iota of waste. It's made of the strongest materials, is easy to keep clean with just a dust cloth and is unusually attractive. *And it cooks with the speed and satisfaction of a gas stove!*

You can obtain the patented Superfex Burner only on a New Perfection range. Dealers in most towns carry it and will gladly demonstrate it for you.

A Plea For Better Understanding—By Jared Van Wagenen, Jr.

A Plea For Better Understanding

Between the Folk of the City and the Man on the Land—A Radio Message

I LIKE to think that in my audience this evening there will be a good many city folk and that I—a farmer—have the opportunity, through the courtesy of American Agriculturist and WEA, of speaking

By JARED VAN WAGENEN, JR.

for which no one is really to blame, seems to have made his way especially hard just these years. We want you men of the city

"We deal with the rawest of raw materials, air and water and sunlight and crude plant food. We are dependent upon the benedictions of a kindly Providence, we are at the mercy of the untimely frost."

to them, if not face to face, then at least by far flung word of mouth, and I covet this opportunity of putting into speech something of my ideas as to what ought to be the relationship of city and country folk. I want to try and let you know what we—my people—think of you and I want to bring to you some statement of our peculiar problems and difficulties.

I am sure that there is nothing more essential than that we should come to know each other because acquaintanceship between any sort of worthy folk breeds understanding and regard and respect. One of the fine things that spring from education and from contact with the world, is a kindly spirit of tolerance and esteem between men of different modes of life. Only the foolish countryman pictures the city as made up of idlers and wastrels and snobs; and only the city man of low degree imagines that the typical farmer looks like a cartoon of Uncle Sam, who on all occasions wears chin whiskers and dirty boots, chews a straw, and whose conversation is made up mainly of such classic expletives as "By Heck" and "I vum."

Intelligent farmers refuse to believe that the city is a den of gentlemanly thieves whose main business and pastime is to rob and exploit the farmer. Nor does he believe that anywhere in America is there a great, far flung conspiracy against the man on the land. He is convinced that on the whole, everybody including the railroads, big business and even that fabled region Wall Street, wishes the farmer well. He sees in the Land Bank Act, the new Federal Credits System, the Fordney Tariff Bill and numberless other special agricultural enactments an earnest, sincere—but it must be confessed—often mistaken and ill-advised effort to help him along the road. I am speaking now of the attitude the farmer himself and not of some of his self-appointed leaders or of those who would hope to profit by his discontent.

The farmer is not a mendicant. He is not asking dole of charity, from government, or anybody else. He is asking only for understanding and sympathy rather than criticism and advice. He does ask recognition of the fact that certain not well understood economic forces for which he is not to blame,

Agriculture, based upon the index numbers of the things the farmer must buy and the things that he may sell. Farming, it is true, has measurably come back from 1920, but not nearly so far or so fast as other industries. This is a matter most vital to him and

We Carry Farm Problems to City Folks

A FARMER said to us the other day, "If only city folks could read the farm papers, what a lot more the farm press could accomplish." The farmer was right. One of the big problems of the day is a better understanding between country and city people.

This idea is one of the main reasons why American Agriculturist is cooperating with WEA, in furnishing at 6:50 P. M., standard time, every Wednesday evening, a farm radio program. This station has an audience of half a million people, a majority of whom are city folks, and we are taking to that great audience weekly, a discussion of many of the acute problems of the farm.

One of the very best of these talks right on this point of better understanding is that by Jared Van Wagenen, Jr., which is printed on this page and which was broadcast from WEA, Wednesday evening, June 20. Some of the good things we have in store for future Wednesday evenings at 6:50 are: June 27, Henry Morgenthau, Sr., ex-Ambassador to Turkey; July 11, Senator Nathan Straus, Jr., Chairman of the Agricultural Committee of the New York State Senate. On dates immediately following, we hope to have Commissioner Berne A. Pyke of the New York State Department of Farms and Markets and F. P. Willits, formerly president of the Interstate Milk Producers' Association at Philadelphia, now Secretary of Agriculture of Pennsylvania. Tune in and then tell us how to make this farm program better.

one concerning which he has a right to ask most earnest questions.

The farmer has demonstrated the fact that when his economic position permits, he is a most liberal purchaser of all commodities that go into his business and his home, thus constituting a most important prop under the general market. He serves notice now that the present much heralded business revival will not go on to permanency and its full fruition unless somehow he has an opportunity to ride along. He reads his daily paper just as you do, only after supper at night instead of at breakfast table or on the "L" or subway. Just these days he sees in glaring headlines that the bricklayers of New York are striking for \$14 per day and a

four day week. Then he remembers that only exceptionally skillful farming will permit a wage of thirty cents per hour. He does not therefore, however, proceed to vote the Socialist ticket or go Bolshevik, but he surely cannot find it in his heart to greatly blame the hired man or even his own son when he decides, as one man put it, "to go and get a little piece of that easy money they give away every Friday noon." I wonder if you know that the old time "hired man" threatens to become an extinct species like the American buffalo or the Dodo bird. I read that there is an acute housing problem in nearly all cities, but it is estimated that there are somewhere between ten and twenty thousand good sized, comfortable, but of course not modern, farm houses vacant in our State. It is evident that in some respects things are economically out of joint.

I wonder if you folk of the cities know the peculiar handicap of the farm boy in the matter of education, and that the cross-roads, one-room schoolhouse is at once the most expensive and the most inefficient system of public education ever devised.

Oh, if I wanted to, I could make a long speech upon this mournful theme of the disadvantages of country living, but I am not accustomed to allow myself to dwell upon these things. I merely want to tell you city folks to-night that farming has its troubles. We deal with the rawest of raw materials,

air and water and sunlight and crude plant food, and against these no government can lay an embargo or a protective tariff. In addition, the hazards of our business are unapproached by any other, for we are dependent upon the benedictions of a kindly Providence, "the early and the later rain," and we are at the mercy of the untimely frost.

But let me turn to brighter things. For example, I am proud of the fact that we have no strikes or lockouts or shutdowns—something of which perhaps no other business can boast. In the face of the most discouraging conditions we maintain production. I suppose this is the reason why, despite food shortage and suffering in certain quarters of the world there is almost a plethora of foodstuffs in all American cities.

Many otherwise well informed people have been led to believe that while the farmer may be virtuous and industrious and plodding, yet he is a wonderfully poor "business man"—in a word that he is sadly lacking in that overworked term "efficiency,"

(Continued on page 526)

"In the face of the most discouraging conditions, we maintain production. Despite food shortage and suffering in other quarters of the world, there is plenty of foodstuffs in all American cities."

ROAD MENDING.—Drawn and Engraved for the American Agriculturist.

In the above engraving is represented a scene of very common occurrence in the majority of country districts. Working out the road-tax is generally made an occasion for mingling a little work with a good deal of good-natured gossip, some politics, and much discussion as to the propriety of this way or that way of filling up a mud hole or repairing a ditch. If this should be looked upon in a way that would occur to a person of the amiable disposition of Mr. Gradgrind, he might object to such a method of doing business as far from economical, and as a waste of time. But Mr. Gradgrind was no

farmer, and never worked out his tax. We have done so, and we know how much a man feels better all over after an hour's shoveling is followed by an equal amount of rest, and moreover it always turns out that the road-work is "done," even though it should need to be done over again in the same way next season. But yet it did sometimes occur to us that this was not quite the way in which work was done at home, and the question "Does this pay?" came up occasionally for consideration. We confess to thinking it did not, and still hold to that opinion, and have little doubt that in

country road-making and mending, as well as in almost all other things, "old things are passing away." If there is one thing more than another in which we need to mend our ways it is in regard to our country roads. The better the roads the more valuable the farms alongside of them, and the greater the value of every pound of produce carted over them. This is true without a question. Then it becomes a serious matter to have roads built so that they may be easily passable, and be kept so without needing the annual outlay of several days' work to each farmer in repairing them.

THE above is an exact reproduction of the page of American Agriculturist of 1873, just a half century ago. There are in the American Agriculturist office, bound volumes of practically every issue that has been printed since the paper started in 1842, and the well-written articles make extremely interesting reading to-day. In looking through these old papers, one is impressed with the fact that farmers struggled with many of the same problems that

still remain unsolved. One of them is too much human nature in road making. Times and customs may change, but human nature is about the same yesterday, to-day, and to-morrow.

Some progress has been made in road making, to be sure, especially along the main highways, but the improved roads we have, have cost altogether too much money; and when it comes to the dirt roads, the least said about them, the better. Mud and rock

are scraped into the middle of them in the spring, as a usual thing, doing more damage than good.

What is needed to get better roads is a little less human nature like that so well depicted in the old picture, and a little more hard work mixed with some common sense. Then, perhaps, we might have some dirt roads that would go far to help solve the marketing problems of the farmers who have to live on them.—THE EDITORS.

VOL. 111 June 23, 1923 No. 25

Commencement

THE monarchs and aristocracy of olden times used every means within their power to prevent the common folks from getting an education. Well they knew that a continuance of their own power depended entirely upon their being able to maintain an ignorant peasantry. Education of the common people has been the one thing above all else that has destroyed the absolute monarchies of the world and given the people a degree of freedom never before realized. How well the fathers of our own country realized this when they established the common school in every community, and put the high schools and colleges within the reach of poor boys and girls. The last hundred years has seen an advance in the world's science and invention beyond the wildest imagination of our forefathers, all of which has been made possible by the inventive genius of educated and trained minds.

A speaker before the graduating class of Columbia University said the other day that the great achievements, of man in the field of action are as varied as life and as individual as the human spirit itself. "And these great works of man are in reality the results of education in its broader sense, acquired either within or without academic walls."

Yet in spite of all this there are a considerable number of people who do not believe in education and consistently and constantly oppose all steps for its support. There are even parents whose children get what education they have in spite of those who should be the first to lend them aid and encouragement.

Of course, it is perfectly possible to put a "thousand dollar education on a hundred dollar boy or girl"; and of course it is true also that an educated criminal is more dangerous to society than one without a trained mind. But it is also true that the great majority who march in the ranks of crime and vice are ignorant and illiterate. It is true, too, that one can be educated without going to school, but in this hurrying age, life is too short to get all of our training from our own

experience; and, schools and books teach the experiences acquired by others down through the ages. He who is not willing to profit by the experiences of others is indeed a fool. They put us in contact with all that the past has achieved in music, in pictures, in science and literature. As a telescope opens to us a vista of an unlimited universe, and the microscope gives us a glimpse of another infinite world beyond the ordinary human vision, so does education open the human mind to contact and experiences which the ignorant and the untrained can never see, experience or enjoy.

As those who lived a half century or a century ago stood upon the threshold of a new and wonderful future in the world's history, so do our children, the citizens of to-morrow, stand at this commencement time at the beginning of a still more wonderful period of achievement in the world's civilization. To meet that future and do their part by themselves, their families and their fellow citizens, trained minds and hands are more necessary than ever before.

Therefore, this is indeed a "commencement" time. There are thousands of boys and girls just graduating from the grades and there are other thousands who are now finishing their high school courses. What larger or better help can parents give these children than sympathetic support and encouragement to continue in school, so as to best train the talents God has given them to render service to themselves and to their fellows?

A Good Sign

THERE is a cloud on the horizon of the present business prosperity. The New York Stock Exchange is very much unsettled with a very decided downward or bearish tendency all the way along the line. The Stock Exchange is the business barometer of the nation. Business men watch its tendencies very closely, well knowing that it is a very accurate indication of the future trend of all other business. It would seem, therefore, that there is to be some check to the present industrial boom. If the hold-up does not go too far, it may be a good thing.

The present prosperity is more or less fictitious, speculative and abnormal. Factories have been running almost day and night to manufacture, and the stores are all doing flourishing business, to sell too many things that people do not need. There has again been a too free use of credit. Thousands of people are driving automobiles that are not paid for.

We believe in reasonably high wages and prices, for when people have money to spend they buy products that farmers have for sale; but there is no question that wages in many trades are too high, resulting in abnormal prices. In short, the pendulum of business has again gone so far to the extreme that a little swing back to the normal will be a good thing for all concerned. In fact, if such reaction does not come soon, there is grave danger of another big depression with hard times for everybody.

A return of business conditions towards the normal is especially necessary for farmers. City prosperity has taken the farm labor and raised too high practically everything that the farmer has to buy, without helping much the prices of the farmers' products. A change downward, providing it does not swing too far, will not be likely to affect the farmers' sales and would help some to lower his costs of production.

Hazards of Farming

THE hill was steep, the wagon, of the old-fashioned, high-wheel, narrow tire type, and the big load of hay was narrow and high. Uncle Sam Farmer had loaded the hay on the level lot at the top of the hill, but when

it came to driving it down to the barn, he asked Young Sam to climb up and do it.

"Nothin' doing," said Young Sam, "you loaded it, Dad, now it's your job to drive it to the barn."

"Boy," said the old man, "I saw four years of bloody fighting in the Sixties, I've had my horse shot from under me, and I've seen men drop like grain before a reaper on both sides of me, but I am most emphatically stating I'd rather take the risk of battle any day than drive this load of hay down that darned old mountain. Please, Sam get up here and let me get down."

Seeing that the old boy was really in earnest, Young Sam climbed on the load and drove it to the barn.

That night, after smoking and enjoying for awhile the quiet peace of the summer night, Uncle Sam spoke up from the dusk at the end of the porch where he was resting.

"Boy," said he, it's funny, isn't it, that farmers growl and groan so much about the weather or the dealers and everything else under the sun, but don't have a word to say about farmin' being such a dangerous business. But by Jinks, when you stop to think of it, I dunno but what I'd rather work in a powder factory than on a farm.

"Only last week you know what happened to poor old Hank Taylor when he was leadin' that big bull of his. A roaring lion is safer any day than an ugly bull, and about all of them are ugly."

"It was only three or four months ago that George Smith was tryin' to patch the roof on his barn, lost his hold some way and has been laid up ever since. About every farmer in three has missin' fingers, lost in gittin' too close to cog wheels or buzz saws."

"What a vicious horse can't do to a man ain't worth mentionin', and some of these tractors, the horse's substitute, every once in a while has the nice little habit of rearin' up on its hind legs and falling over backwards, smashin' the life out of the poor devil who can't move quick enough to get out from under it. At hayin' time, there are forks to dodge and dislodged pulleys to look out for."

"And yes," interrupted Young Sam, "and big loads to drive down bad hills."

"You remember," continued the old man without apparently noticing the interruption, "Russ Davis at hayin' time a couple or three years ago, who was feeling so well from leetle too close attention to a case of beer that he fell clear off the mow and struck his head on the barn floor. When he got up, he said it fairly dazed him!"

"At thrashin' time you've got to watch out that the belt don't knock you out, or the thrasher don't eat you. Knew a feller once who lost two legs before they could get him out of the cylinder."

"Even sheep are dangerous. Old Johnny Smith came over the hill some years back to shear sheep for Uncle George Carpenter. There was a barrel of cider in the cellar that the Missus hadn't got around to let out, and the old boys got to feelin' pretty good. They had the sheep shut up in the barn and they hopped and hollered around so much that the poor critters got kinda excited. Then when John wasn't lookin', George opened the barn door and drove the sheep all out on the run. As they went, they knocked John—who was settin' on a milk stool trying to shear a sheep—over, and the whole dum flock ran over him. It laid him up for three weeks and George's wife had to take care of him and board him."

"Yes, sir, if anyone should ask you, farmin' is a hazardous business. 'Bout time one of them safety fust campaigns struck the farm."

After all, life is like soda-water. Childhood, effervescence, corked down and wired; manhood, some sparkle, more vapidly; old age, empty bottle, cart it away with the rubbish.—T. W. ROBERTSON.

Why Not Go Camping With the Car?

An Inexpensive and Enjoyable Vacation For the Farm Family

IN the past, no people have had fewer vacations than farmers, and there are none that need a little rest and recreation more. One of the many good things that the automobile has brought is a chance for farm people to get away from the daily grind for a few days. Not only do they come back physically rested and refreshed, but they bring back with them many new ideas that come from their observations of improvements that other farmers have made—which makes the trip more than worth while from a financial standpoint.

Hundreds of thousands of American people go camping every year with their automobiles. Over half of these are farm people. There would be more who would do the same thing if they realized how easy

the trip. There are a number of different styles of beds that may be used inside of the car. In a Ford sedan, the seat backs fold forward and by setting up two suit cases or other suitable material alongside between the seats, a foundation may be laid, upon which blankets may be spread to form a comfortable bed.

Another device which may be used in the sedan is the "Foldaway Bed," which will fold when not in use into a bundle 4½" x 4', and weighs only fourteen pounds. A suitable bed for the Ford touring car is called the "McMillan Auto Bed," which may be purchased for about ten dollars, or less.

Another car bed is manufactured by the American Camp Equipment Company, which will fit any kind of a car, may be set up either in the car or out, and can be used in the tent or house. It is called the "Moto Bed" and will cost about twelve dollars. So much for sleeping in the car.

Sleeping in the Open or Tents

When the car is not used for sleeping, one can sleep on the ground with only a blanket between, or on small boughs, or in a sleeping bag; or best of all, on cots. Sleeping on the ground is not advised, for only an old-timer can get good rest in this way. Sleeping bags are rather expensive, but they are very handy and most people can get comfortable rest with them. Some folks get good rest in hammocks, but it usually takes several nights to get used to them, and many never get a comfortable sleep in them. It is difficult also with hammocks to guard against mosquitoes.

Most people who do not sleep in their cars use some one of the many different kinds of folding cots. A cot may be cold in cold weather, but if one has plenty of blankets to put under as well as over him, this can be guarded against.

There are all kinds and varieties of tents which motorists can use, on the market. The varieties most commonly seen are those which hitch to the side of a car. Many of these use no poles, but are supported by ropes which fasten to the top of the car. They may be purchased for as low as \$7.50 for 7' x 7' size. This particular tent is called "double service Moto-tent."

Another inexpensive tent that stands apart from the car is called the "Scout Featherweight Shelter Tent," which has a door at each end that can be opened or closed to shut the world out completely. A more elaborate tent for long trips is called the "Overland Trail Tent." This has a bed for two people, raised 15" from the floor. There are pockets in the side walls and a netting door sewed to the front wall. Such a tent is suitable for two people traveling very

light on trips, making overnight stops. The whole outfit weighs only seventeen pounds and can be purchased for something like \$14.

With whatever kind of tent or sleeping apparatus, great care must be taken to provide for keeping out annoying mosquitoes and other insects.

When it comes to bed and bedding, most people will be able to equip themselves fairly well from the home supplies. As bedding is apt to be bulky and difficult to carry, care should be taken to choose that which has the most warmth and requires the least space. Army blankets, which can be purchased at army stores, make very good camp bedding.

One of the good things about traveling and camping is the fine appetites that are gen-

From "Motor Camping" (Dodd, Mead & Co.)

With the suspension bed (above) and the car curtains, it is possible to duplicate a fair tent. In the case of larger parties, tents serve a better purpose, being used in conjunction with the car

and cheap it is to travel by car if they do not depend upon the hotels for sleeping and eating accommodations. Even if one cannot get away for more than two or three days by using a simple camping outfit, many trips can be made at small expense and with a large amount of enjoyment.

One of the best books that we have seen on the subject of camping is entitled "Motor Camping," written by J. C. and John D. Long, and published by Dodd, Mead and Company, New York City. Because so many farm people are interested in this subject, we are giving in this article a brief discussion on how to camp with the car and an outline of the simple equipment needed for eating and sleeping. We are indebted for most of our information to the above mentioned book.

The first principle to remember in motor camping is to travel light. There will be a tendency at first to pile the car full of too much equipment and to pack poorly. This will result in constant irritation, taking much of the pleasure out of the trip by causing so much trouble to take care of the stuff. All camping equipment should be purchased from the standpoint of packing it in small space, and if possible making it serve more than one purpose in the camp.

The first consideration is how rest there will be little fun in to sleep. If one cannot get good

From "Motor Camping" (Dodd, Mead & Co.)

Eating is one of the factors that must not be ignored. Healthy appetites and camping go hand in hand. Here are some convenient devices for cooking. The stove is collapsible

erated; that is, this is a good thing, provided there is plenty of good, wholesome, well-cooked food. Stopping at expensive hotels—and they are all expensive these days—is beyond the means of ordinary folks. Therefore, it comes down to a problem of cooking and serving one's own meals in the camp.

Mr. Long in his book says the average motor camper will find it convenient to provide himself with some sort of equipment for cooking his food and drink. "The simplest heating outfit is the 'Solidified Alcohol Kit.' These are not much good except for making tea, coffee or cocoa, or heating canned soup. They are especially handy for short week-end trips."

All camping outfit companies have various varieties of camping stoves. The simplest of these is the "Rush Stove" which will fold up flat when not in use, and costs about \$5. It can be set up in ten minutes and will burn either coal or wood. Oil stoves are good, but are hard to carry. Mr. Long mentions one which is called the "Optimus Traveling and Camping Stove," which can be taken apart and packed in small space. Gasoline stoves are very effective, but they are also dangerous, unless used with great care. One of the best gasoline stoves is called the "Colorado Sure Meal Camp Stove." This stove can be opened up and

Motor camping puts beautiful scenery within the reach of folks of moderate means

4 TIMES Around the World with ONE OILING 100,000 Miles Without Stopping for Oil

An inventor who could develop an automobile, a railroad car or any other conveyance on wheels which would perform such a feat would be considered a wonder. But such is the record of regular accomplishment by the Auto-oiled Aermotor during the past eight years in pumping water.

Did you ever stop to think how many revolutions the wheel of a windmill makes? If the wheel of an Aermotor should roll along the surface of the ground at the same speed that it makes when pumping water it would encircle the world in 90 days, or would go four times around in a year. It would travel on an average 275 miles per day or about 30 miles per hour for 9 hours each day. An automobile which keeps up that pace day after day needs a thorough oiling at least once a week. Isn't it marvelous, then, that a windmill has been made which will go 50 times as long as the best automobile with one oiling?

The Auto-oiled Aermotor after 8 full years of service in every part of the world has proven its ability to run and give the most reliable service with one oiling a year. The double gears, and all moving parts, are entirely enclosed and flooded with oil all the time. It gives more service with less attention than any other piece of machinery on the farm. To get everlasting windmill satisfaction buy the Auto-oiled Aermotor, the most efficient windmill that has ever been made.

Controlling Moisture Vegetable Growers Are Increasing Overhead Irrigation

AS the value per acre of our crops increases, the amount at stake grows, and it becomes increasingly necessary to see that the limiting factor is not neglected.

By PAUL WORK

sults much more promptly than has been possible in the past.

PAUL WORK

When we invest land and labor and equipment and supplies in expectation of a profitable crop, we can ill afford to see our outlay jeopardized through lack of a single essential item such as plant food or moisture. Dr. Warren says that the weather is the great factor in determining the yield of crops for a given year. Weather is not subject to human control, but the supply of moisture in the soil may be modified to such an extent as to mark the difference between success and failure. Such control is especially important with those vegetable crops which cannot wait for rain. If cabbage or field corn lack water early in the season, they can be brought through by late rains. Lettuce and early cabbage must have moisture at the right time or heavy loss is the result. Even the cannery crops with their less intensive cultural methods must mature promptly, or quality, as well as yield is sacrificed.

Intensive gardeners, in spite of the high cost of pipe and other materials, are increasing their areas under overhead irrigation. This is proving profitable, for it frequently happens that one thorough watering may save a crop and there is seldom a summer when there is not a dry month.

Control by moisture does not necessarily demand costly equipment. The part played by cultivation in retaining moisture is not quite so strongly emphasized as formerly, but humus content of the soil, time of plowing, and other soil management factors are of great importance.

There is need for careful study of western irrigation methods as applied in the East. Plans that involve leveling would not be practicable on our soils, but the advent of cheap and portable power should make it possible in many cases to lift water from streams and distribute it in furrows without developing the pressure that is necessary for overhead systems.

We Must Know Our Varieties

Fruit men know their varieties. Even the vegetable men who study the varieties the most diligently cannot know them well, for the standards are not established.

It makes a difference whether the grower of kraut cabbage plants Succession or Glory or Allhead Early. All three of these are used. Perhaps still more important is the strain of the variety chosen. There may be as much difference between Allhead from two different sources as between Allhead and Succession. One seed producer may select Succession for a flat head with as much solidity as he can get. Another may select for a deep head which will give the most and the best kraut cabbage per acre. This is a question that involves dollars.

Neither cabbage growers nor any of the other vegetable growers may expect to know what they are buying when they buy seeds until variety types have been carefully studied and until standard variety descriptions have been published and generally accepted.

Congress did well in killing the Congressional free seed appropriation, but the appropriation for studies of types and varieties of vegetables died with it.

By reason of its opportunity to study on a nation-wide basis; climatic and market requirements as well as varieties in use, the government is in a position of peculiar advantage for doing this work. The appropriations instead of being eliminated should be established on a basis that will bring re-

The Vegetable Growers' Association of America has been interested for over a year in developing the idea of advertising vegetables. National campaigns of the type which has helped orange and raisin producers could hardly be carried out for the vegetable industry as a whole. The present movement contemplates offering to individuals and local associations a service that will help them in local advertising for their own territory.

The first step has been the preparation of an attractive illustrated two-color poster, promoting the use and canning of tomatoes. This is intended to help out with the annual glut which strikes practically every market about mid-season. It is to be available for this season and is intended as a feeler to test the demand for such service. Further possible developments include recipe books, "Eat Vegetables for Vitamins" signs for trucks and wagons, layouts for local newspaper advertising and such other items as may be required.

National Vegetable Meeting in Buffalo

New Yorkers will have an unusual opportunity to meet vegetable growers from all over when the Vegetable Growers' Association of America meets in Buffalo next September. The Albany meeting of 1921 was too far east for a truly representative gathering. Buffalo is almost ideally located.

Plans are already well under way for the meeting and an all-day trip about the Erie County producing territory will be a central feature. This will be of special interest to the general farm vegetable grower as the bulk of the crops are grown on a field scale rather than under the extremely intensive methods that are characteristic of most market garden sections adjoining large cities. Even the more intensive men about Buffalo are growing fewer crops on larger areas than formerly. Erie also produces great quantities to can and to ship as well as to sell locally.

Oswego Leads in Lettuce

The New York State Department of Farms and Markets reports a survey just made by it shows that Oswego leads all other New York counties in carlot shipments of lettuce last season. New York State shipped a total of 3,166 carloads of lettuce to city markets last year, between June and November. The height of the season was in August, when 1,006 cars were shipped.

In order of their importance, the following are the main carlot lettuce-shipping counties in the State: Oswego, Genesee, Wayne, Orleans, Livingston, Madison, Oneida, Monroe, Cattaraugus, Niagara, Chautauqua, Orange, Seneca, Cayuga and Onondaga.

FRUIT GROWERS TO MEET AT GENEVA

The New York State Horticultural Society, with a membership of several hundred prominent fruit growers scattered throughout Western New York and the Hudson River Valley, will hold its summer meeting on the grounds of the New York Agricultural Experiment Station at Geneva on Wednesday, August 1, according to a statement issued by Dr. R. W. Thatcher, director of the station, and a member of the program committee. The details of the program have not yet been worked out; but, as in the past, it is expected that tours of the station experimental plats, where dusting and spraying experiments for insects and diseases of fruits and vegetables are under way, will be a prominent feature of the day's activities.

A summer meeting of the society will also be held in the eastern part of the State later in the season.

In the last issue and also in many others which I have had occasion to read, I have found some very good things and lots of valuable pointers. —Leslie M. Merwin, Fillmore, N. Y.

Potato Growers at Syracuse

Fine Spirit Prevails at Annual Meeting

AN exceptionally fine spirit prevailed throughout the annual meeting of the Empire State Potato Growers' Association held in Syracuse, June 13, which incidentally brought out some facts that potato growers may well seriously consider between now and marketing time next fall. There were three very concise factors brought out in Manager Steele's report that will materially affect the success of the organization this year. They are namely, volume of business, financing and local management. The report of Mr. Steele shows that the association could have handled several times the volume handled in the past without any increase in overhead. Obviously, during the past year the association did not operate most economically and a greater volume of business must be handled for the growers to realize a minimum expense for handling their crop.

Increasing in Membership

One of the outstanding features of Mr. Steele's report was that there was an increase in the number of locals during the year, bringing the total up to 30. This will increase the volume of business for the coming year. According to Mr. Steele, there is a much better demand for Empire potatoes and cabbage and the association could have sold several times the volume of Empire spuds handled because the buyers were satisfied with product the association is turning out.

Comparative potato sales showed that 89 per cent of the association sales netted from 2 cents to 32 cents per bag above those reported by the Rochester office of the Bureau of Markets. During the past two years Empire State potatoes and cabbages have been sold to 260 buyers in 23 States and 140 markets. An interesting item in the report is that \$8.50 per thousand was the amount saved in pooling potato bag orders for the locals.

President K. C. Livermore in his address, representing the directors, reviewed the past two seasons' results and voiced the opinion that progress has been made. He reviewed the Rochester meeting of April 11, which was addressed by Aaron Sapiro, head of the legal department of American Federation of Farm Bureaus. Mr. Livermore stated that the directors had selected the State-wide organization committee which will take up the enlarged and State-wide potato and cabbage organization. The Sapiro plan of organizing potato and cabbage crops was received with unanimous approval.

Secretary-treasurer E. P. Smith rendered a financial report and read the auditor's report, which showed that all accounts of the association are satisfactory. Both reports were adopted.

Factors that Control Success

H. E. Babcock, general manager of the G-L-F Cooperation Association was one of the main speakers and gave an excellent talk on the factors that go to make cooperative organizations successful. He emphasized ample financing, trained and competent management, not only in central, but in the local associations, and volume of business as necessary to the success of the association. "To make these associations pay," he said: "there must be a volume of business. To get volume of business is costly. The G-L-F has increased its business recently and by so doing it has wiped out its deficit and made a start toward paying a dividend, but it cost heavily at first to get the business. To increase volume means that you must go after it, and a lot of hard work is needed. The present business of the G-L-F could be doubled with almost no increase in office space, stenographic help and general overhead. A good manager is needed in every local, and one must be had. To get and keep such a manager, volume of business is necessary. Capital is also a necessity and the three constitute the major portion of all the problems of the local association."

The association is planning to continue its business this year along somewhat the same lines as last year. However, efforts are being made to increase the volume of business. Last year

466 cars of potatoes were handled while arrangements had been completed for handling somewhat like 1,200. Of course the extremely low prices of last year was responsible for much of the farmer's produce not being shipped, which obviously cut down the amount the association could handle. For instance most of the cabbage grown by the members was fed to stock because the growers considered that it was worth more for feeding than could be realized on it when shipped to market. As soon as this situation was realized last year, expenses were cut down on all sides by the association, but it was too late to avoid a deficit which is being carried over to what the members hope will be a better year.

There are something like 50 growers present represented by 20 of the 30 locals of the central organization. Several of the locals were not only represented by delegates, but by several growers who were not delegates. There was a high degree of interest manifested in the meeting and from this enthusiasm one would readily infer that the association will not lack support this coming year.

Advocate California Plan

The organization plans which will follow the so-called California plans, were received enthusiastically. This will mean an entirely new membership list each with a \$5 membership fee and the adoption of a pooling plan. Maine has already organized such an association enrolling 65 per cent of the growers of the State as members. It is not considered advisable with less than 50 per cent of the producers enrolled. Colorado, Minnesota, the Dakotas, Wisconsin and Michigan are already prepared to organize pooling associations. New York may also be considered in the list with the possible addition of New Jersey.

Three directors were elected at this meeting for a term of three years. One director was elected to take the place of J. A. Childs, resigned. The nominating committee appointed by President Livermore consisted of H. N. Kutschbach of Sherburne; William New of Wellsville and Fred Beecher of Earlville. The directors elected were Fred Hencle of Baldwinsville; H. L. Freeman of Marcellus and William New of Wellsville, all for three years each. G. P. Gregg was elected to fill the vacancy created by Mr. Child's resignation. The other directors who are carried over are: K. C. Livermore of Honeoye Falls; E. P. Smith of Sherburne; Datus Clarke of Peru; C. M. Hennis, Gainesville and F. E. Williams, Earlville. The directors elected the following officers: K. C. Livermore, president; Fred Hencle, vice president; and E. P. Smith, secretary-treasurer.—H. H.

WESTERN NEW YORK BEAN CROP WELL CLEANED UP

According to bean dealers in Western New York, beans have never been so thoroughly cleaned up at this season of the year. According to "The Packer," they place total holdings at less than 150 cars, divided evenly between red kidney and pea beans. In view of this fact, it seems to be the sentiment of the trade that prices will continue firm, with a likelihood that they may advance before a new crop comes in.

Importations of Orientals may offset the scarcity yet. During the first week in June, quotations for hand-picked stock f. o. b. Rochester were: Red kidneys, \$8; peas, \$7.50; Yellow Eye, \$8; marrow, \$10, and medium, \$7.50. The indications for the 1923 crop is that the acreage will be heavy if weather conditions are satisfactory. In view of the extreme shortage of labor, however, plantings may be reduced materially. Labor shortage will also have an effect when the factor of cultivation is taken into consideration.

The Robust pea bean is gaining in popularity in Western New York. It is said to be resistant to many of the common bean diseases, and has met increased favor. Although it does not come up to red kidneys in maximum yield, the average is probably better.

BROOKMEAD'S STARLIGHT, 73133, of Brookmead Farm, Devon, Pa. In two successive lactation periods she produced 32,107.5 lbs. milk, 1,621.42 lbs. fat—a record rarely equalled in the history of the breed.

A Great Guernsey and a Great Feed Get Together

... and another Great Record results

THIS frequently happens when a very fine pure-bred, such as Starlight, has made Diamond's acquaintance. When grade cows become fond of this feed there usually occurs a decided increase in milk and butter production.

DIAMOND Corn Gluten Meal was a substantial part of Starlight's ration during the period in which she established this record.

Diamond plays no favorites. If you make it a substantial part of your grain ration your herd cannot fail to show big results in the milk pail.

No wonder it's in

Fruit Growers Hold Annual Meeting

Western New York Cooperative Reports Business Near \$2,000,000 Mark

DECLARING that the "underlying principles of the organization are correct and sound," President H. W. Davis, in his address at the annual meeting of the Western New York Fruit Growers' Cooperative Packing Association, expressed the conviction and the spirit of the fruit growers of Western New York.

The meeting was held at Convention Hall, Rochester, on June 12, and despite good spraying weather, over 125 fruit men were present, representing all but three of the 40 local packing houses affiliated with the association.

"All agree," said President Davis, "that standardization of our fruit is absolutely necessary for the upbuilding of the industry, and that this can only be done through cooperative effort; all admit that wide distribution is necessary, and a certain amount of judicious advertising. We must look on the fruit industry of Western New York as a whole and realize that we will stand or fall with the industry and not as individuals. If we raise the reputation of New York fruit through standardization so people are anxious to buy it, every individual grower in Western New York benefits."

Mr. Davis declared that the fruit growers of Western New York had been forced into cooperative marketing by the growers of the Northwest. "We found we were literally crowded out of the market. Sometimes we could not get as much for a barrel of apples as they could for a box. We could see that this was because of the poor reputation New York apples had on the market. Retailers would not buy them if they could get the standardized product from the Western States. We realized that something had to be done, and we entered into the cooperative movement."

Five Year Contract Necessary

"I think the biggest mistake we have made," continued Mr. Davis, "is that we started on a one-year contract rather than a five-year contract. There are many sound reasons for the longer term contract. In the first place, it takes a local association five years to get efficiently set up and its methods of business in order. Then there is the matter of price. Price depends on distribution, standardization, and advertising; you cannot do much on any of these in one year. Finally, a one-year contract does not contribute to a healthy relation between a local packing house and the central; the management of the central has to spend too much time and labor holding the locals in line—this costs money and detracts from efficient management of the central."

"Make it so that no one can turn aside within five years, and then no one will want to."

3,553 Cars Handled

Manager N. R. Peet reported that 3,386 cars of fruit were shipped by the association, besides 167 cars of cider apples on which the central made no handling charges, a total of 3,553 cars sold by the farmers' own organization. Mr. Peet said that the quality of this fruit was fully up to the average of Western New York when delivered to the packing houses, and when graded and packed under Cataract brand it set a new standard of quality for New York fruit.

In all, ten counties in which the association operates, he said, there are spraying services conducted by the farm bureaus. Last year only five counties offered this spray service to members. This improvement in production methods Mr. Peet credited largely to the report of the organization's production methods, which showed greatly increased returns on properly sprayed fruit.

Many Varieties a Handicap

Discussing some of the problems connected with the management of the organization, Mr. Peet pointed out that the condition of the fruit itself from the time of delivery at the packing house to point of destination was one of the chief handling costs. He deplored the necessity of handling too

many varieties and expressed the opinion that same varieties should be grouped in pools.

"Few of the members," said Mr. Peet, "have any conception of the immense amount of detail connected with accounting for the various pools and disbursing the receipts. Accounting problems, however, are pretty well solved. Next year, if the recommendation of the finance committee is carried out, a payment of substantial size will be made December 1, and subsequent payments made as pools on the different fruits close."

"Experience has shown," Mr. Peet said, "that a saving of about 15 per cent is possible through the purchase of large quantities of supplies such as barrels and packing materials—for cash." He predicted more activity along this line. Referring to the discouragement of some of the growers because certain fruits or varieties had netted them very little, Mr. Peet pointed out that such experiences were inevitable, and that the only way to judge the success of the association was over a long period. "The greatest success will be possible only when growers have learned to think and act collectively."

Sales Approach Two Million

The report of the treasurer, which was made in considerable detail and thoroughly explained by the association's auditor, gave the gross sales as \$1,803,564. Deductions for storage, brokerage, freight, insurance, government inspection, operating and sale expenses, amounted to \$555,133. The central association made a deduction of 10 per cent for operating expenses; this sum included \$81,955 brokerage fees paid to the Federated Fruit and Vegetable Growers, Inc., which acted as sales agent for the growers' organization.

New Directors Elected

M. C. Burritt of Hilton, representing the Parma Association of Monroe County, and W. J. Hall of Lockport, secretary-treasurer of the Lockport, Niagara County, branch, were elected to the board of directors for three-year terms. They take the place of the retiring president, H. W. Davis of Alton, and treasurer, I. L. Vosler of Lyndonville. William Carr of the Albion Association, Orleans County, was elected for one year to fill the unexpired term of J. A. McCollum of Newfane, who had resigned.

HOLSTEINS AVERAGE \$617 AT NATIONAL SALE

One hundred and fifteen head of Holstein cattle averaged \$617 at the Fourth National Cooperative Sale held at Cleveland, Ohio, on June 7 and 8, in connection with the 38th annual convention of the Holstein-Friesian Association of America. The average of the national sale held at Kansas City, a year ago, was \$470. The total for all animals sold in this year's event was \$71,005.

A five-months-old bull calf consigned by Berylwood Stock Farm of Hueneme, Calif., sold for \$3,100 to L. L. Allis of Rummerfeld, Pa.

A cow consigned by Daisy Hill Farms of Chagrin Falls, Ohio, brought \$1,650. Abner S. Deysher of Reading, Pa., was the purchaser.

E. M. Clark, Secretary of the Ohio Holstein-Friesian Breeders' Association, was manager of the sale.

LONG NEWS IN SHORT PARAGRAPHS

Already thousands of farm folks are making plans to attend the World's Dairy Congress and National Dairy Show in Syracuse, October 5-10. W. E. Skinner, manager of the National Dairy Show, has opened offices in Syracuse, and has brought 20 or more assistants from Chicago to help him get ready for the great event.

"The Labor Movement and the Farmer," by Hayes Robbins, published by Harcourt, Brace & Co., of New York City, gives a very clear analysis and history of the labor union movement,

and shows the relation between the labor movement and agriculture. The book is good because it gives in a readable manner a clear, unprejudiced view of the development of organized labor and endeavors to bring to the farmer a better understanding of the aims of organized labor, and to labor a better knowledge of the farmer and his problems.

* * *

A representative of the League of Nations has stated that the League will do everything in its power to interest other countries in the World's Dairy Congress.

* * *

Tent caterpillars, especially in some sections, are a dangerous menace to fruit trees and other vegetables this year. They seem to be particularly bad in Westchester County, New York.

* * *

The globules of fat in five quarts of milk would, if placed end to end, encircle the earth, according to the computations based on facts found by a student in the Dairy Industry Department at Cornell. There are 2,890,020,000 fat globules in one quart of average milk. The average diameter of a fat globule is about .003 of a millimeter. Fat globules produced in twenty-four hours by one good cow would, if placed end to end, make an invisible thread more than ten times around the earth. More and more science is opening up to us great unknown realms invisible to the human eye.

* * *

The government reports that the principal grain crops of the country will be smaller this year than last, with the exception of oats and barley. The reduction in wheat is estimated to be about five or six per cent smaller than last year. Smaller crops of apples and peaches than last year are indicated, although they will be larger than the average crops of the five years 1917 to 1921, inclusive.

* * *

The Springfield National Farm Loan Bank has the honor of making the first loan under the new Intermediate Credits Law. The loan was made to the Farmers' Fund, Inc., of Rochester, and was for \$50,000. The money will be supplied to farmers at 6 per cent interest.

* * *

The State of Wisconsin has issued a general order penalizing cheese factories and creameries which issue false financial statements to farmers.

* * *

Continued large importations of butter from foreign countries has caused a weak butter market in New York. Most of the foreign butter comes from Denmark and Argentina; it is also imported from New Zealand, Ireland and Holland.

* * *

More than five million persons recently heard one radio address. This was the largest audience ever addressed in the world's history. It was made possible by the connection of several of the big broadcasting stations. More people heard this talk than inhabited the whole of America in early colonial days.

* * *

The New England Milk Producers' Association, with headquarters at Boston, reports that there has been an unexpected increase in milk production. The statement says: "Milk is coming in a flood, a deluge. Not since we have had any records has so much come in as will come in in June. This will materially affect the price, as a much larger proportion of the milk will have to be sold in Class 2, which brings a lower price."

* * *

Hog values on the Chicago market touched \$6.75 on June 1. This was the lowest price since January, 1912.

* * *

I like the new management, and especially the articles by the new contributor, Jared Van Wagenen. His best work reminds me of the late Joseph E. Wing, and that is high praise, and I wish you would tell him I said so.—W. E. Bowman, Snow Hill, Md.

Give a thought to Advertising

THE other day we read an exceedingly interesting article entitled, "The Humble Beginnings of Our Great Advertisers." It told the interesting story of how some of the concerns who are now well known advertisers started their first advertising campaign.

The most interesting fact to us was the small advertising appropriations of these concerns. Here is a partial list:

Huppmobile Motor Company
\$100.65

L. E. Waterman Company
\$62.50

Wm. Wrigley Company
\$32.00

Borden's Company
\$513.75

The list is a long one, but we cannot reproduce it here. It is interesting to note how small an appropriation these concerns started with and they are today among the greatest advertisers in their field. There certainly is no question about their belief in advertising, as the Postum Cereal Company would say, "There's a Reason."

* * *

Too many consider advertising as an expense, and how often I hear it said, "Charge it to advertising." Ask any of these concerns, and they will tell you advertising is an investment and the best investment they ever made.

* * *

To be sure, not all advertising is successful. But the big, outstanding fact is that we can think of no well-known product that is sold to the public which is not advertised. Some products are so poor they cannot stand advertising, in fact, the best recognition of a product's value is the length of time it has stood advertising.

* * *

How about your own advertising? Have you anything to sell or wish to buy? If so, try our classified or live stock columns. We reach over 120,000 farmers in New York, Pennsylvania and New Jersey, and it doesn't require a big appropriation to advertise. We will be glad if you write us regarding this.

Jersey Wars on Gypsy Moth

Potato Growers Hold Tour—Pennsylvania News

FIGHTING gypsy moth infestation in the Watchung Mountain section of New Jersey is presenting the New Jersey State Department of Agriculture, cooperating with Federal entomologists, with one of the most difficult problems ever faced in an insect campaign in the State. In addition to eleven State-owned sprayers, the Federal Bureau of Entomology has loaned thirteen high pressure sprayers for use in the more heavily wooded areas. Long reels of hose will be used as extra equipment to enable the moth fighters to penetrate the wooded areas where the pest is congregated.

When the scouting work on the gypsy moth was completed on June 1, reports showed only a total of 1,140 egg masses in the entire State, as compared with over 3,000,000 reported in 1920, which indicates the effective work of the State authorities since the gypsy moth first appeared in New Jersey three years ago. Creosoting of the egg masses has killed the eggs.

The infestation is confined mainly to parts of Somerset and Middlesex Counties. Infestations previously reported in the northern part of the State and along the coast have been exterminated. A parasite which destroys the gypsy moth has been reared artificially and introduced in the moth section of New Jersey with the hope of reaching such other pests as have not been touched by creosoting and lead arsenate.

POTATO MEN HOLD ANNUAL TOUR

The Garden State Potato Association was scheduled to hold its annual inspection tour on June 18 and 19, cooperating with the New Jersey State Potato Association and the County Boards of Agriculture of Monmouth, Mercer and Middlesex Counties. The tour was to start at Freehold, N. J., the first day being spent in the inspection of variety tests in the heart of the big Monmouth County potato belt. The second day the tour was to continue in the adjacent counties of Middlesex and Mercer, where variety and potato machinery demonstrations were scheduled. The New Jersey Potato Association offered medals for champion horseshoe pitchers in a "barnyard golf" contest held at Hightstown, in conjunction with the tour.

* * *

The desirability of seed potato stock from various seed producing sections of the country is being tested by the New Jersey State Experiment Station in a 36-plot test near Elmer, N. J. Freedom from disease and relative producing qualities of the seed from various sources is sought. On June 25, potato growers from the central and southwestern sections of the State will inspect the plots and adjacent potato fields. The experiment is similar to many smaller tests being conducted this year in various parts of the State to test the relative value of seed stock from northern States as compared with that produced on New Jersey farms.

* * *

Reports received very generally from various parts of New Jersey, indicate that the germinating power of seed corn this year is above the average, since last fall was especially favorable for the proper drying of the seed saved for this year's planting. Considerable root rot in corn was reported last year and badly discolored or shredded butts or otherwise discolored ears were thrown out. County Agents were urging farmers to plant only such ears as were heavy and with smooth and "horny" grains.

CENTRAL NEW JERSEY DAIRY NOTES

According to the Mercer Office of Farm Demonstration, interest is keen this season in that county in good Holstein cows. Several new breeders and several of the farmers already established in the business are making further purchases of well-bred animals to use as foundation stock or for the general improvement of their herds.

The recent sale of the Gloucester, Cumberland and Salem County Holstein Association distributed good animals to a number of breeders in New Jersey.

The second annual picnic of the New Jersey Guernsey Breeders' Association at Princeton, N. J. in early June, brought out a large attendance of dairy-men and prominent speakers of other States as well as New Jersey. A judging contest for calf club members was held in conjunction with the regular program.—W. H. B.

PENNSYLVANIA FARMERS OPPOSE LIMIT TO BRIDGE CAPACITY

Nearly 300 farmers from the grain producing counties of Pennsylvania attended a recent legislative hearing at Harrisburg to oppose passage of a proposed measure which would limit bridges to a capacity of 15,000 pounds. Threshing outfits which travel the grain producing counties of the State weigh up to almost double the proposed limit. It was brought out at the hearing by Secretary J. A. Rose of the State Threshermen's Association, that the measure advocated would necessitate the loss of three-fourths of these machines, the total value of which is placed at \$12,000,000. Grain farmers maintained that smaller machines would increase the cost of threshing and lengthen the season.

Interest is wide-spread over a bill recently signed by Governor Pinchot of Pennsylvania, which increases to 75 per cent the amount of State aid to rural schools to be paid to districts having \$50,000 or less valuation per teacher. It also gives a 60 per cent increase in such districts having \$50,000 to \$100,000 valuation per teacher and 50 per cent to those districts having \$100,000 to \$150,000 valuation. Many of the farm organizations of the State have effectively backed measures which will bring further support to rural schools.

AMONG KEYSTONE BREEDERS

During the last month several well-attended livestock sales have been held within the State. Among these was the consignment sale of shorthorn cattle, under the auspices of the Southwest Pennsylvania Shorthorn Association at Washington, Pa. Most of the animals were sold to farmers and breeders of the locality and prices were not up to mark, 28 animals bringing an average of only \$96 apiece. The best Shorthorn sold for \$245. Another sale was that of the National Guernsey Association held at Devon, Pa., where 90 animals brought \$105,000, or an average of \$1,282 each.

Pennsylvania was well represented at the eighth annual convention of the Holstein-Friesian Association of America held in Cleveland, Ohio, on June 6. Following delegates from the State were present: W. A. Woods of Carlisle; James M. Paxton of Houston; John A. Bell, Jr., of Pittsburgh; Frank A. Keen of Westchester; Dr. L. M. Thompson of Montrose; John H. Shirk of Lancaster; O. A. Shirey of Williamsport; W. Hugh Jones of South Montrose and H. E. Robertson of York.

FIELD DAYS AT THE COLLEGE

A large turnout of farmers attended the field day exercises at the Pennsylvania State College of Agriculture on June 13 and 14, at which time the new beef cattle barn at the college was officially opened. This splendid building is up-to-date in every respect and adjoins the new dairy barn erected at the college several seasons ago. State Secretary of Agriculture, F. P. Willits, was scheduled to speak at the official opening. The full instruction and experimental facilities at the college were open during the field days for visitors. The need for further support of the agricultural work at the college was brought to the attention of visitors, augmenting the campaign which a State Committee representing allied agricultural interests started for legislative help over a year ago.

Killed 200 Rats New, Easy Way

Dog, Ferret and Traps Failed. Amazing Virus Killed Them All. Not a Poison.

"I was over-run with rats," writes H. O. Stenfort of Redford, Mich. "Seemed to be several hundred of them. Dog, Ferret and Traps failed. Tried Imperial Virus and was rid of them all in a short time. Have found rat skeletons, large and small, all over the farm."

Rats, Mice, Gophers, in fact all Rodents greedily eat Imperial Virus on bait. Sets up burning fever. Pests die outside, hunting for water. Harmless to humans, poultry, pets, stock, etc. Endorsed by

Farm Bureau Experts and large, nationally known institutions everywhere. Economical to use. Large size trial bottle of this true virus for 50c or

You Can Get Yours Free

SEND NO MONEY. Write today to Imperial Laboratories, Dept. 1006, Kansas City, Mo., and they will mail you two regular \$1.00 bottles of Imperial Virus (double strength). Pay postman only \$1.00 and a few cents postage when package containing regular \$2.00 quantity arrives. Use one yourself and sell the other to a neighbor, thus getting yours free. Readers risk no money, as Imperial Laboratories are fully responsible and will refund the cost on request any time within 30 days.

Classified Advertising Rates

ADVERTISEMENTS are inserted in this department at the rate of 5 cents a word. The minimum charge per insertion is \$1 per week. Count as one word each initial, abbreviation and whole number, including name and address. Thus: "J. B. Jones, 44 E. Main St., Mount Morris, N. Y." counts as eleven words.

Place your wants by following the style of the advertisements on this page.

Our Advertisements Guaranteed

THE American Agriculturist accepts only advertising which it believes to be thoroughly honest.

We positively guarantee to our readers fair and honest treatment in dealing with our advertisers.

We guarantee to refund the price of goods purchased by our subscribers from any advertiser who fails to make good when the article purchased is found not to be as advertised.

To benefit by this guarantee subscribers must say: "I saw your ad in the American Agriculturist" when ordering from our advertisers.

The More You Tell, The Quicker You Sell

EVERY week the American Agriculturist reaches over 120,000 farmers in New York, New Jersey, Pennsylvania and adjacent States. Advertising orders must reach our office at 461 Fourth Avenue, New York City not later than the second Monday previous to date of issue. Cancellation orders must reach us on the same schedule. Because of the low rate to subscribers and their friends, cash or money order must accompany your order.

**ALL GOOD THINGS COME TO HIM WHO WAITS—BUT
THE CHAP WHO DOESN'T ADVERTISE WAITS LONGEST**

EGGS AND POULTRY

SO MANY ELEMENTS enter into the shipping of day-old chicks and eggs by our advertisers, and the hatching of same by our subscribers that the publishers of this paper cannot guarantee the safe arrival of day-old chicks, or that eggs shipped shall reach the buyer unbroken, nor can they guarantee the hatching of eggs. We shall continue to exercise the greatest care in allowing poultry and egg advertisers to use this paper, but our responsibility must end with that.

CHICKS—White Wyandottes; S. C. White Leghorns. Pure-bred stock. 100% delivery guaranteed. Can make immediate shipment on Leghorns. Wyandottes \$13. Leghorns \$10 per hundred. ULSH POULTRY FARM, Port Trevorton, Pa.

500 LEGHORN CHICKS, July 10th, from vigorous, production bred stock. 250-egg strain, large fowls, 95 per cent chalk-white eggs. Quick growing hustlers. Lay at 4½ months. E. COYLE, Branchport, N. Y.

WHITE PLYMOUTH ROCK eggs for hatching, \$1.25 per 15; \$3.50 per 50; \$6 per hundred, postpaid; White Pekin Duck Eggs, \$1.50 per 11, postpaid. JOS. G. KENNEL, Atglen, Pa.

BARRON WHITE LEGHORNS, 303-egg strain. Chicks, \$9.50 per 100. Immediate delivery. Pullets, hens. Not a hatchery. MAPLE ACRES FARM, Tiffin, O.

PULLETS 8 TO 12 WEEKS—Hens, Leghorns, Rocks, Reds, Anconas, Minorcas, farm-raised. FRANK'S POULTRY FARM, Box A, Tiffin, Ohio.

SWINE

REGISTERED DUROC WEANED PIGS—\$10, either sex, including papers, crating, delivering. Quick-growing husky rascals. CHAS. MEARSON, Weedsport, N. Y.

PIGS! PIGS! PIGS!—The best registered Chester White, 8 weeks old. Satisfaction guaranteed. \$10 each prepaid. CLARENCE BEY, Clarrington, Ohio.

FOR SALE—Large English Berkshire boar pigs, two months old; price \$7 each. Papers for registration furnished. KRANTZ & SONS, Dover, Ohio.

FOR SALE—Registered Chester White swine. Write your wants. J. A. BOAK & SONS, R. D. 4, New Castle, Pa.

HELP WANTED

WANTED AT ONCE—Men (single, or married men with small families) to work in modern cow barn. Wages \$60 to \$70 per month and board. Good chance for advancement. Large herd of registered Holsteins. WINTERTHUR FARMS, Winterthur, Delaware.

WANTED—Single man to work on dairy farm through July and August; \$60 per month and board. Milking machine used. Give good references. HARRY E. O'CONNOR, Pleasant View Farm, New Kingston, Delaware Co., N. Y.

ALL men, women, boys, girls, 17 to 60, willing to accept Government positions, \$117-\$190, traveling or stationary, write MR. OZMENT, 258 St. Louis, Mo., immediately.

Why Not Go Camping With the Car?

(Continued from page 521)

water boiled in five minutes. The price is about \$9.

Cooking equipment, like everything else, must be kept simple. A tin cup, plate, knife, fork and spoon for each person together with two or three dishes to cook the food in over the fire or on the stove, all of which will pack and nest together, is all that the average person will need. Outfits may be purchased which contain everything needed for cooking in a single case. One such outfit for two people contains one 7-pint cooking pot, one 10-pint cooking pot, one 4-pint coffee pot, one frying pan, two plates, two dessert spoons, two cups, two soup bowls, two knives, two forks and two teaspoons.

Other tools that will be necessary for any camper, in addition to the regular repair and adjustment implements for the car, are some kind of a camp axe, a shovel and a hunting knife. The car will have its own lights, but an adjustable spotlight will also be found satisfactory and a good lantern will also come handy.

Other Conveniences

There are a lot of other conveniences that may be added, one of which is a refrigerator basket, but we would advise against taking on too much equipment at first until one learns by experience just what is needed to get the most fun. One of the best parts of the trips are the pleasant memories recalled by photographs, so "Kodak as you go."

Speaking of a complete camp outfit, Mr. Long says: "An auto camper who has been at the camping game for the past ten years, who has kept at week-end camping right along and who has crossed the continent a couple of times, camping along the route, has out of his long experience reached this as his standard outfit. He takes an "Auto Bed" with a 7 x 7' tent; a six-pound cotton pad or mattress for the bed; a two-burner gasoline camp stove; one heavy double blanket; one wool-filled quilt; a blanket roll; two eight-quart milk cans for water; and a refrigerator basket. The whole affair packs into very small space."

A party of four Ohians from Cleveland took a twelve-hundred-mile motor camping trip through their own and one or two adjacent States, at a cost of about one dollar a day each. The outfit which they used, which made them very comfortable, was as follows:

Keep Baggage Down

"Personal baggage was kept down to the lowest possible amount. Two double suit cases rode on the baggage carrier, and two large duffle bags were placed in front of the suit cases. They also carried a tool outfit, including a spade, hatchet, pick-ax, and a coil of strong rope; also the usual repair kit for car and tires. The outfit just described weighed two hundred and fifty pounds. This list was found to meet every requirement and was easily packed in the car."

"In addition to the articles already named the following items were also carried: one canvas tent 8½ feet square, one A tent 8 by 10 feet, four folding stools and cots, blankets, ponchos and pneumatic pillows, two waterproof duffle bags, canvas water bottle, folding water bucket and basin,

two hatchets and clothes line, aluminum cooking set, alcohol stove and fuel, two vacuum bottles and a refrigerator basket, two electric flashlights, camera and tripod, fishing tackle, canned provisions, coffee, sugar, etc., tarpaulins and assorted straps."

Camper should always plan to take plenty of warm clothing, including wool under-clothing.

When it comes to buying camp equipment, there are the large mail-order houses, which carry quite a large variety, the merits of which can be studied from the catalogs in nearly every farm home. There are several large camp equipment manufacturers that make everything the camper needs and there are also army stores in most cities where most of the material can be found at reasonable prices.

All that we can hope to do in an article of this kind is to give you a suggestion. If you are really interested, we would suggest that you get Mr. Long's book for more details, or talk with some experienced camper in your own neighborhood. If we have succeeded in creating interest in a few more farm families in this splendid way of getting some much needed rest and recreation, then this article has been worth while.

A Plea For Better Understanding

(Continued from page 518)

and that all his calling needs is a large dose of business methods. I want to tell you that the farmer is the unconscious heir to a great heritage of skill and practical knowledge, and that he already conducts his business so efficiently that anyone else who tries it is pretty sure to arrive at bankruptcy unless he has outside resources.

Sometimes these self-appointed efficiency experts are pleased to compare the per acre yields of American and European or Asiatic farms, and thereby cause the American farmer to appear in a most discouraging light. As a matter of fact, if judged by the food units produced per man (not by bushels per acre), the American farmer is the best and most efficient farmer in all the world.

Relatively, we are declining in numbers. There are six and one-half million heads of farm families in the United States. There are almost a quarter of a million farmers in New York State. Yet, in this State only one man out of ten lives directly from the soil. We are surely dependent upon you, but you cannot live without us. Let us be friends and neighbors and comrades.

I am told that the membership of the Chamber of Commerce of Rochester includes some 600 farmers who live on the fat farms which lie around that beautiful city. This is because a far-seeing Secretary has come to realize that Rochester is a widespread community and not a walled town, and that it includes many business men whose plant is under the open sky and not beneath a roof or within brick walls.

I wish very earnestly that I had time and wisdom so that I might plead in worthy fashion for a better and closer sympathy and appreciation and understanding between the folk of the city and the folk of the farm.

MEETINGS OF NEW YORK GRANGE OFFICIALS

The conference of Masters and Lecturers of New York State Granges have been scheduled for the month of June as follows:

- June 25—at Syracuse, in the Court House, (County Court, Part II, 3rd Floor), for the Counties of Cayuga and Onondaga.
- June 26—at Pulaski, in the Grange Hall, for Oswego County.
- June 27—at Watertown, in the Grange Hall, for Jefferson County.
- June 28—at Lowville, in the Grange Hall, for Lewis County.
- June 29—at Canton, in the Grange Hall, for St. Lawrence County.
- June 30—at Malone, in the Pangborn Post Rooms, for Franklin County.

The Brown Mouse — By Herbert Quick

"THE grammar is good this morning. You're gradually mastering the art of stating a problem in arithmetic in English—and that's improvement."

The hands of Jim Irwin's dollar watch gradually approached the position indicating nine o'clock—at which time the schoolmaster rapped on his desk and the school came to order. Then, for a while, it became like other schools. A glance over the room enabled him to enter the names of the absentees, and those tardy. There was a song by the school, the recitation in concert of *Little Brown Hands*, some general remarks and directions by the teacher, and the primary pupils came forward for their reading exercises. A few classes began poring over their text-books, but most of the pupils had their work passed out to them in the form of hectograph copies of exercises prepared in the school itself.

As the little ones finished their recitations, they passed to the dishes of wheat, and began aiding Raymond's squad in the counting and classifying of the various seeds. They counted to five, and they counted the fives. They laughed in a subdued way, and whispered constantly, but nobody seemed disturbed.

"Do they help much, Calista?" asked the teacher, as the oldest Simms girl came to his desk for more wheat.

"No, seh, not much," replied Calista, beaming, "but they don't hold us back any—and maybe they do he'p a little."

"That's good," said Jim, "and they enjoy it, don't they?"

"Oh, yes, Mr. Jim," assented Calista, "and the way Buddy is learnin' to count is fine! They-all will soon know all the addition they is, and a lot of multiplication. Angie Talcott knows the kinds of seeds better'n what I do!"

CHAPTER VIII

AND THE OLD BOTTLES

THE day passed. Four o'clock came. In order that all might reach home for supper, there was no staying, except that Newt Bronson and Raymond Simms remained to sweep and dust the schoolroom, and prepare kindling for the next morning's fire—a work they had taken upon themselves, so as to enable the teacher to put on the blackboards such outlines for the morrow's class work as might be required. Jim was writing on the board a list of words constituting a spelling exercise. They were not from the text-book, but grew naturally out of the study of the seed wheat—"cockle," "morning-glory," "convolvulus," "viable," "viability," "sprouting," "iron-weed" and the like. A tap was heard at the door, and Raymond Simms opened it.

In filed three women—and Jim Irwin knew as he looked at them that he was greeting a deputation, and felt that it meant a struggle. For they were the wives of the members of the school board. He placed for them the three available chairs, and in the absence of any for himself remained standing before them, a gaunt shabby-looking revolutionist at the bar of settled usage and fixed public opinion.

Mrs. Haakon Peterson was a tall blonde woman who, when she spoke betrayed her Scandinavian origin by the northern burr to her "r's," and a slight difficulty with her "j's," her "y's" and long "a's." Jim felt an instinctive respect for her personality. Mrs. Bronson was a good motherly woman, noted for her housekeeping, and for her church activities. She looked oftener at her son and his friend Raymond than at the schoolmaster. Mrs. Bonner was the most voluble of the three, and was the only one who shook hands with Jim; but in spite of her rather offhand manner, Jim sensed in the little, black-eyed Irishwoman the real commander of the expedition against him—for such he knew it to be.

"You may think it strange of us coming after hours," said she, "but we wanted to speak to you, teacher, without the children here."

"I wish more of the parents would call," said Jim. "At any hour of the day."

"Or night either, I dare say," suggested Mrs. Bonner. "I hear you're the scholars here at all hours, Jim."

JIM smiled his slow patient smile. "We do break the union rules, I guess, Mrs. Bonner," said he; "there seems to be more to do than we can get done during school hours."

"What right have ye," struck in Mrs. Bonner, "to be burning the district's fuel, and wearing out the school's property out of hours like that—not that it's any of my business," she interposed, hastily, as if she had been diverted from her chosen point of attack. "I just thought of it, that's all. What we came for, Mr. Irwin, is to object to the way the teachin's being done—corn

and wheat, and hogs and the like, instead of the learnin' schools was made to teach."

"Schools were made to prepare children for life, weren't they, Mrs. Bonner?"

"To be sure," went on Mrs. Bonner, "I can see an' the whole district can see that it's easier for a man that's been a farm-hand to teach farm-hand knowledge, than the learnin' schools was set up to teach; but if so be he hasn't the book education to do the right thing, we think he should get out and give a real teacher a chance."

"What am I neglecting?" asked Jim mildly.

Mrs. Bonner seemed unprepared for the question, and sat for an instant mute. Mrs. Peterson interposed her attack while Mrs. Bonner might be recovering her wind.

"We people that have had a hard time," she said in a precise way which seemed to show that she knew exactly what she wanted, "want to give our boys and girls a chance to live easier lives than we lived. We don't want our children taught about nothing but work. We want higher things."

"Mrs. Peterson," said Jim earnestly, "we must have first things first. Making a living is the first thing—and the highest."

"HAAKON and I will look after making a living for our family," said she. "We want our children to learn nice things, and go to high school, and after a while to the Juniwersity."

"And I," declared Jim, "will send out from this school, if you will let me, pupils better prepared for higher schools than have ever gone from it—because they will be trained to think in terms of action. Aren't you're children happy in school, Mrs. Peterson?"

"I don't send them to school to be happy, Yim," replied Mrs. Peterson, calling him by the name most familiarly known to all of them; "I send them to learn to be higher people than their father and mother. That's what America means!"

"They'll be higher people—higher than their parents—higher than their teacher—they'll be efficient farmers, and efficient farmers' wives. They'll be happy, because they will know how to use more brains in farming than any lawyer or doctor or merchant can possibly use in his business."

"It's a fine thing," said Mrs. Bonner, coming to the aid of her fellow soldiers, "to work hard for a lifetime, an' raise nothing but a family of farmers! A fine thing!"

"They will be farmers anyhow," cried Jim, "in spite of your efforts—ninety out of every hundred of them! And of the other ten, nine will be wage-earners in the cities, and wish to God they were back on the farm; and the hundredth one will succeed in the city. Shall we educate the ninety-and-nine to fail, that the hundredth may steal them away to make the city stronger?"

The guns of Mrs. Bonner and Mrs. Peterson were silenced for a moment, and Mrs. Bronson, after gazing about at the typewriter, the hectograph, the exhibits of weed seeds, the Babcock milk tester, and the other unscholastic equipment, pointed to the list of words, and the arithmetic problems on the board.

"Do you get them words from the speller?" she asked.

"No," said he, "we got them from a lesson on seed wheat."

"Did them examples come out of

an arithmetic book?" cross-examined she.

"No," said Jim, "we used problems we made ourselves. We were figuring profits and losses on your cows, Mrs. Bronson!"

"Ezra Bronson," said Mrs. Bronson loftily, "don't need any help in telling what's a good cow. He was farming before you was born!"

"Like fun, he don't need help! He's going to dry old Cherry off and fatten her for beef; and he can make more money on the cream by beefing about three more of 'em. The Babcock test shows they're just boarding on us without paying their board!"

THE delegation of matrons ruffled like a group of startled hens at this interposition, which was Newton Bronson's effective seizing of the opportunity to issue a progress bulletin in the research work on the Bronson dairy herd.

"Newton!" said his mother, "don't interrupt me when I'm talking to the teacher!"

"Well, then," said Newton, "don't tell the teacher that pa knew which cows were good and which were poor. If anyone in this district wants to know about their cows they'll have to come to this shop. And I can tell you that it'll pay 'em to come too, if they're going to make anything selling cream. Wait until we get out our reports on the herds, ma!"

The women were rather stampeded by this onslaught of the irregular troops—especially Mrs. Bronson. She was placed in the position of a woman taking a man's wisdom from her ne'er-do-well son for the first time in her life. Like any other mother in this position, she felt a flutter of pride—but it was strongly mingled with a motherly desire to spank him. The deputation rose, with a unanimous feeling that they had been scored upon.

"Cows!" scoffed Mrs. Peterson. "If we leave you in this yob, Mr. Irwin, our children will know nothing but cows and hens and soils and grains—and where will the culture come in? How will our boys and girls appear when we get fixed so we can move to town? We won't have no culture at all, Yim!"

"Culture!" exclaimed Jim. "Why—why, after ten years of the sort of school I would give you if I were a better teacher, and could have my way, the people of the cities would be begging to have their children admitted so that they might obtain real culture—culture fitting them for life in the twentieth century—"

"Don't bother to get ready for the city children, Jim," said Mrs. Bonner sneeringly, "you won't be teaching the Woodruff school that long."

All this time, the dark-faced Cracker had been glooming from a corner, earnestly seeking to fathom the wrongness he sensed in the gathering. Now he came forward.

"I reckon I may be making a mistake to say anything," said he, "f'r we-all is strangers hyeh, an' we're pore; but I must speak out for Mr. Jim—I must! Don't turn him out, folks, f'r he's done mo' f'r us than eveh any-one done in the world!"

"What do you mean?" asked Mrs. Peterson.

"I mean," said Raymond, "that when Mr. Jim began talking school to us, we was a pore no-count lot without any learnin', with nothin' to talk about except our wrongs, an' our enemies, and the meanness of the Iowa folks. You see we didn't understand you-all. An' now, we done got hope from this school. We're goin' to make good in the world. We're getting education. We're all learnin' to use books. My little sister will be as good as anybody, if you'll just let Mr. Jim alone in this school—as good as anyone. An' I'll he'p pap get a farm, and we'll work, and think, an' be happy!"

CHAPTER IX

JENNIE ARRANGES A CHRISTMAS PARTY

THE great party magnates who made up the tickets from governor down to the lowest county office, doubtless regarded the little political plum shaken off into the apron of Miss Jennie Wood-

ruff of the Woodruff District, as the very smallest of all the plums on the tree; but there is something which tends to puff one up in the mere fact of having received the votes of the people for any office. Jennie was a sensible country girl. But she did feel some little sense of increased importance as she drove her father's little runabout over the smooth earth roads, in the crisp December weather.

The weather itself was stimulating, and she was making rapid progress in the management of the little car which her father had offered to lend her for use in visiting the one hundred or more rural schools soon to come under her supervision.

Mr. Haakon Peterson was phlegmatically conscious that she made rather an agreeable picture as she stopped her car alongside his top buggy to talk with him. She had bright blue eyes, fluffy brown hair, a complexion whipped pink by the breeze, and she smiled at him ingratiatingly.

"Don't you think father is lovely?" said she. "He is going to let me use the runabout when I visit the schools."

"That will be good," said Haakon. "It will save you lots of time. I hope you make the county pay for the gasoline."

"I haven't thought about that," said Jennie. "Everybody's been so nice to me—I want to give as well as receive."

"Why," said Haakon, "you will just begin to receive when your salary begins in January."

"Oh, no!" said Jennie. "I've received much more than that now! You don't know how proud I feel. So many nice men I never knew before, and all my old friends like you working for me, just as if I amounted to something."

"And you don't know how proud I feel," said Haakon, "to have in county office a little girl I used to hold on my lap."

IN early times, when Haakon was a flat-capped immigrant boy, he had earned the initial payment on his first eighty acres of prairie land as a hired man on Colonel Woodruff's farm. Now he was a rather richer man than the colonel, and not a little proud of his

WHAT HAS HAPPENED

JIM IRWIN'S school is going strong, but the community, which elected him teacher to break a deadlock, is scandalized by his "notions." The children, however, flock to help him judge seed corn, work out problems drawn from everyday farm life and argue about different breeds of dairy cattle. Firmest among his adherents are Newton Bronson, former village problem, and Raymond Simms, the misunderstood mountain boy. Against him are pitted the school board and public opinion, while Jennie Woodruff, his old sweetheart, has gone over to the enemy since Jim showed lukewarm enthusiasm on her election as county superintendent, an office she holds because of political favor.

ascend to affluence. He was a mild-spoken, soft-voiced Scandinavian, quite completely Americanized, and possessed of that aptitude for local politics which makes so good a citizen of the Norwegian and Swede. His influence was always worth fifty to sixty Scandinavian votes in any county election. He was a good party man and conscious of being entitled to his voice in party matters. This seemed to him an opportunity for exerting a bit of political influence.

"Yennie," said he, "this man Yim Irwin needs to be lined up."

"Lined up! What do you mean?"

"The way he is doing in the school," said Haakon, "is all wrong. If you can't line him up, he will make you trouble. We must look ahead. Everybody has friends, and Yim Irwin has his. If you have trouble with him, his friends will be against you when we

(Continued on page 528)

Putting the Sheppard-Towner Bill Into Action

State Health Department Plans—Another Embroidery Design—Better Homes on Less Money

ALTHOUGH the work of carrying out the provisions of the Sheppard-Towner Act may be slow in getting started, every farm mother should eventually benefit by it, according to Dr. Nichols of the State Department of Health. Dr. Nichols who addressed a "jubilee meeting" held recently at the Y. W. C. A. building in New York City by the United Women's Organizations which achieved the passage of the bill, said that women doctors and nurses were now being trained for this special service.

Some misunderstandings about the work to be done have arisen, and Dr. Nichols, in explaining the method to be followed, said that in no case would help be forced upon any woman who did not want it. Expert, personal service will be available to all prospective mothers who thus can safeguard their own health, as well as that of their babies. The importance of pre-natal care has been more and more realized, and the danger of loss of life to both mother and child is greatly lessened when proper care is observed during pregnancy.

Miss Lillian Wald, originator of the visiting nurse idea, who has now more than a hundred such nurses under her supervision in New York City, gave some interesting figures showing the immediate decrease in maternal and infant deaths when pre-natal nursing care is given. Miss Wald spoke of the fact that during the epidemic of influenza which proved particularly dangerous to pregnant women, there was not a single death from that cause in a group of five thousand persons under systematic nursing care. The death rate of babies under a year old in the crowded city districts which these nurses serve is now exactly one-half that of the rest of the city, and is far lower than the rate in the country.

Sixty Miles to a Doctor

"Not every one knows the origin of the Sheppard-Towner bill, which some time ago passed the Federal Government, providing funds for States which appropriated an equal amount," said Miss Wald. "Although the subject of better care for mothers in isolated districts had been much discussed, I think that it was first crystallized when I received a letter from a western woman, a real pioneer of fine old stock, who was expecting her first baby and who wrote to me in New York, for advice. The nearest help of any sort was 60 miles away and a good doctor was even further. A woman physician I knew was planning for her vacation and thought Wyoming as good a place to spend it as any other. So she went clear out there to bring that baby into the world. Her report of the conditions under which these splendid western women were bringing up their families stirred us all up to action."

New York State, though not so sparsely settled as portions of the West, is lamentably short of both doctors and nurses, according to Mrs. F. H. Vanderlip and Mrs. Mitchell, officers of the League of Women Voters, who worked valiantly for the bill. In making a State health survey in the interests of the bill, League members found that farm women constantly spoke of their need for pre-natal care.

A Fair Chance for Mothers and Babies

"Every so often, when we were asking for signatures to our list of those in favor of the bill, some one would say 'Do you want Aunt Ella to sign?' She's been bedridden since her baby was born," said Mrs. Mitchell. "We would answer that indeed, we did want Aunt Ella's signature. We wished that we could have indicated in some special way the names of the many women who suffered permanent ill health or whose children died or were not strong because the mother did not have a fair chance. It does not force a woman to have pre-natal care, but the woman who wants to bear her child under healthy, normal conditions, may have it for the asking."

Difficulty in obtaining skilled doctors and nurses was reported by Dr. Nichols as the main reason for the slow progress of the State Department in getting

the work under way. He said that the demonstrations given by a visiting nurse far outweigh printed instructions, and that such nurses had to be trained for their special sort of work. He reported that local doctors were eager to have the benefit of advice from and conference with specialists, and said that the department welcomed calls for cooperation and would answer them as quickly and as liberally as possible. The Federal fund is entirely in the hands of the State Department to administer.

WHEN DREAMS COME TRUE

Before I was married, I had planned on all new furniture for our home, but family finances altered the case. Husband's mother gave us part of our furniture and my grandmother contributed the rest. But since I've renovated everything in the house, I don't feel a bit ashamed now when my old school friends drop in to call.

When we first moved into our little home, the floors and the wood-work in each of the four rooms were painted a sickly yellow and the wall papers were of so many colored hues that they fairly shouted at you.

When we decided to renovate, I began with the kitchen. It is 9 x 12, and had only one outside door, facing the south, and one small window facing the west.

Windows Improve the Kitchen

I placed two medium sized windows on each side of the door on the south, and substituted two larger ones for the small west one. Husband balked at the idea of an all-white kitchen, but he gave in at last. The wood-work, shelves, table and cupboards are all enamelled in white. The walls are covered with a blue and white checked oilcloth paper that is easily kept clean.

I had an old linoleum rug that had once been blue and white and was still in fairly good condition. I gave it two coats of delft blue paint and had a nice looking rug.

All my life, I planned on a sink and hot and cold water in the kitchen. So I finally came to the conclusion that I'd dig down into the bank account and have my ideal kitchen. So we purchased a pneumatic hand power pump and had it placed in the smokehouse. It pumps all the water right into the house from the well and only cost us \$52.75.

The hot water boiler, that is heated by the kitchen range, cost \$24.75. The wash bowl and sink for the kitchen were all white enamel, and the sink has double drain boards.

The sink cost \$40.95 with all fittings and the wash bowl, \$12.45. Husband did all the carpenter and plumbing work himself, thereby saving 80 cents on the hour.

Paint Goes a Long Way

The living-dining room was painted all in white too, and I put a blue and white rag rug down on the floor. The walls were papered with a pretty subdued design in grey.

The table and chairs were all white (the table was a small kitchen table), and were stenciled with tiny borders of blue thistle and pink rose design. For the windows I used pretty cretonne.

The smaller of the two bedrooms is just large enough to hold a bed, dresser and a chair. The wood-work here was all in white, and the curtains were made of grey and pink cretonne. A small chiffonier, a four poster bed and a small rocker were finished in silver grey. I placed a small mirror over the chiffonier and a grey and pink cretonne cushion in the rocker. The wall paper was grey.

My own room was all blue, the furniture being painted a soft shade of blue. It was stenciled with a tiny pink rose design. A blue and pink rag rug is on the floor.

The walls were papered with a quiet paper. Where dresser and table scarfs, were necessary, I made them out of the cretonne.

The entire cost of our renovation was \$175. The hot and cold water supply outfit alone cost \$140.—A FARMER'S WIFE.

FOR NEXT WINTER'S MENUS

Now is the time to begin the planning of the vegetable course for next winter's meals. Why? Because now is the time to plan the garden, and while planning your garden allow an extra row of peas, wax beans, beets and tomatoes (if you do not have a large tomato patch) for home canning. I prefer the first lot of peas, wax beans and beets for this, for not only are they better flavored, but the ground can then be planted in sugar corn for early fall canning. Country Gentleman and Shoe Peg are both very good varieties of sugar corn for canning;

and Golden Bantam is excellent for canning on the cob.

The hardy greens are better for winter if you have a good place to keep them in, where they will not have to be disturbed to make room for something else; but it is nice to have a few jars of canned greens for emergency if it should be too stormy to get the other. And though dried lima beans are good soaked over night and boiled with a piece of meat, canned green beans are nicer.

I prefer the "Conservo Cooker" to other makes of canning apparatus, as not only—to me—is it easier and quicker, but the fruit and vegetables retain more of the natural flavors.

I now have on hand enough canned vegetables to last till the fresh vegetables come on, because my husband plants as many for canning purposes as he does for use during the season; we both gather the ones for canning and prepare them, and I do the canning. And because of our joint work we have from two, three or four vegetables on our dinner table every day throughout the year.—CATHERINE R. GROVES.

THE JARS ON YOUR SHELVES

How many cans of fruit and vegetables will the average family use? The Department of State Economics at the State College at Ithaca suggests the following quantities to last for one year: For a family of five, 80 quarts of tomatoes, 100 quarts of green vegetables, 50 quarts of starchy vegetables, 250 quarts of fruits and 40 quarts of preserves and jellies.

Because of the presence of certain necessary vitamins, tomatoes are provided in quantity, but the use of oranges at certain seasons of the year may somewhat decrease the amount of tomatoes used. The amount of vegetables stored may also affect the quantity of green vegetables in cans.

The Brown Mouse

(Continued from page 527)

want to nominate you for a second term. If we go to convention without your home delegation it would weaken you, and if we nominate you, every piece of trouble like this cuts down your vote. You ought to line him up and have him do right."

"But he is so funny," said Jennie. "He likes you," said Haakon. "You can line him up."

Jennie blushed. "But if I cannot line him up?" "I tank," said Haakon, "if you can't line him up, you will have a chance to rework his certificate when you take office."

So Jim Irwin was to be crushed like an insect. Jennie dimly sensed the tragedy of it, but very dimly. Mainly she thought of Mr. Peterson's suggestion as to "lining up" Jim Irwin as thoroughly sensible. She could not help feeling a little resentment at Jim for following his own fads and fancies so far. The idea that there could be anything fundamentally sane in his overturning of the old and tried school methods, under which both he and she had been educated, was absurd to Jennie. To be sure, everybody had always favored "more practical education," and Jim's farm arithmetic, farm physiology, farm reading and writing, cow-testing exercises, seed analysis, corn clubs and the tomato, poultry and pig clubs he proposed to have in operation the next summer, seemed highly practical; but to Jennie's mind, the fact that they introduced dissension in the neighborhood and promised to make her official life vexatious, seemed ample proof that Jim's work was visionary and impractical. Poor Jennie was not aware of the fact that new truth always comes bringing, not peace to mankind, but a sword.

"Father," said she that night, "let's have a little Christmas party."

"All right," said the colonel. "Whom shall we invite?"

"Don't laugh," said she. "I want to invite Jim Irwin and his mother, and nobody else."

(Continued next week)

DESIGN FOR A SCARF END OR SOFA PILLOW

HERE is an embroidery design which is equally effective for a sofa pillow or table scarf. It is simple to do, requiring only three easy stitches—the outline stitch, the "lazy daisy" and the french knot. Yet the design is so arranged that by combining your colors cleverly you can get a very artistic effect.

Tan linen, worked in dark brown heavy twist silk for all but the french knots which are worked in a golden yellow, is smart. So is black satin, using dark green and golden yellow.

A transfer pattern for this design, in size 12 by 16 inches will be sent upon receipt of 12c in stamps. Address your order to the Handicraft Department and ask for E 12.

"She Wrote the Pageant, You Know"

A Visit to Mrs. G. Thomas Powell—Ideas For the Home Dressmaker

By GABRIELLE ELLIOT

"MRS. POWELL of Glen Head, Long Island, who wrote the Farmers' Week Pageant, you know—"

Of course Mrs. Powell was a very popular and well-known woman in New York State farm affairs before the first performance of her work at Syracuse, but ever since then she has been known largely as "the author of the pageant" and anyone mentioning her name is sure to speak of that really noteworthy piece of writing.

The pageant, with its sound knowledge of farm life and problems and its strongly optimistic philosophy, was in itself an introduction to the woman who wrote it. But Mrs. Powell is the sort of person who is so vitally and genuinely interesting in everything and everybody else that it was perhaps just as well to have a little idea of her work before meeting her. Otherwise she might never have thought that subject important enough to get around to!

Mrs. Powell's greatest charm—and she has many—is perhaps her beamy smile. When the train pulled in to the little Glen Head station, down on Long Island, she stood smiling a welcome on the platform and when the city bound train pulled out some hours later, the last impression was of her cheerful wave and smile as she saw her guest safely on board and started to turn the little car around towards home again.

Mrs. G. Thomas Powell is a much beloved woman, not only in her own community of Glen Head, Long Island, but all through the State. She is an enthusiastic attendant upon the annual Farmers' week at Ithaca, and many who do not know her personally feel as though they did, because they have seen her and heard her speak at the conferences there

In between the welcome and the goodbye came a real old-time visit, during which we rocked and gossiped in the big front room, talking about everything under the sun. According to Mrs. Powell, who is not a native-born Long Islander, Nassau county is a pretty nice place to live, and the big comfortable house, the wide fields stretching out behind it and the tang of the sea-air which drifts in no matter how far inland a Long Island farm may be, all seemed to confirm her in her belief.

"The population of the Island is constantly shifting, however," said Mrs. Powell. "Recently something very amusing happened, which certainly made us feel like the oldest inhabitants."

"At the back of the house we have a loud but useful dinner bell with which I call Mr. Powell when meal time comes around. It isn't especially handsome—at least in our eyes—but it serves its purpose."

"A little while ago, a liveried chauffeur left at my door a note from one of the big estates which now lie all about us. The letter, written on crested stationery, in a very dashing handwriting, said that the lady of the estate had admired the quaint old bell which hung behind our house and that she hoped we would not be hurt by her request that we sell it to her. Understanding how we must cherish it, she said, she would be willing to pay almost anything for the privilege of owning this beautiful antique."

Mrs. Powell paused and chuckled reminiscently. Her sense of humor is very keen and she evidently got much enjoyment from the experience.

Origin of "The Quaint Old Dinner Bell"

"Well, we called a family council. My husband suggested that we ask her \$75 and that then, just as the bargain was to be concluded, our little golden haired daughter should run in, burst into tears and say, 'Oh you're not going to sell dear great-grandfather's dinner bell are

you?" That would boost the price to \$100.

"However, after amusing ourselves thus, truth conquered. I sat down and wrote the lady a prompt reply. I told her that we were not especially attached to the bell and would be glad to sell it at a fair figure. But, I added, it might save trouble if she simply got another like it, direct from Sears-Roebuck. That was where we had bought ours, about six months before, and the cost was \$3.67 plus freight. No, she never answered my letter—or came for the bell."

A different kind of neighbor, according to Mrs. Powell, but one in whom there are many possibilities for development, is the immigrant farmer who has recently settled in such large numbers on the Island. As we drove to the station, the road swarmed with youngsters just out of school, and all apparently, members of the suicide club and willing to meet their end at that moment. Mrs. Powell, however, managed to avoid them neatly, and even had time to beam in her motherly way upon the small impuders of traffic. She had an eye for the cunning ones and the pathetic ones alike, and pointed out an industrious Polish housewife valiantly painting her house. "She has the right idea," said Mrs. Powell approvingly.

Then the talk came back to the pageant, and it developed that this was by no means her maiden effort. Another pageant, written for "Old Home Week" at Port Byron had preceded it, and, indeed, she had always liked to write.

The Lifelong Desire to be a Writer

"It was my great dream as a girl," confessed Mrs. Powell, "but I never thought I should actually achieve even a small portion of fame. When the pageant went so well at Syracuse, and was repeated successfully at Ithaca, during Farmers' Week, I certainly felt amply repaid for any work it may have meant in writing and staging it—that was all a labor of love, anyhow. And it seemed to me that much of the credit should have gone to Jared Van Wagenen, Jr., and all the other participants, who prepared their roles so carefully and were so fine in them."

The Port Byron celebration, it came out, centered largely in the historical pageant which Mrs. Powell wrote and which enlisted the services of all ages in its many picturesque scenes. Last July was the 50th anniversary of the founding of the Port Byron Academy, of which Mrs. Powell was a graduate, and the school was made the center of all the celebration. The population of this historic village was swelled from 1,100 to 6,000 on the evening of the pageant, and the realistic Indian and pioneer scenes were especially popular with the descendants of the original settlers in both the cast and the audience.

At dinner—as bountiful and generous a meal as one would expect from such a hostess—Mr. Powell joined the group, and the talk turned to the two daughters, absent at school, the family music, which was suggested by the presence of a piano and violin stand, and the unsuspected state of housecleaning which, Mrs. Powell solemnly stated, had upset the house from top to bottom. Its effects were quite unnoticed in the airy, comfortable downstairs rooms however, and when the guest de-

parted it was with great admiration for the woman who could so cheerfully welcome company to a home in the throes of the spring seizure and who was so mistress of herself that she could sit down for a good, long, neighborly chat unconcerned by the goings-on of painters and plasterers over her head.

THE CORDED FINISH

There is nothing that gives a taffeta, satin or wool dress a more tailored effect than to finish it with cording. The neck, armholes (if the sleeves are set into an underwaist), waist line (if the waist is the long effect), the tunic or side panels—all can be finished nicely this way. If the method explained herein is carefully followed there should be no trouble in cording correctly.

First, cut bias pieces 1½ inches wide, sew together and press. Now hem one side flat, sew on where cording is desired just as you would sew on a facing. Turn seam back toward the dress and smooth down or press, put the cord next the seam and turn facing over the cord and draw facing tightly. Hold smoothly, for the cording cannot be pressed. With a double silk thread, back-stitch the cording, being careful to take the shorter stitches on top and the longer ones underneath, as the stitches on top shouldn't show.

I find this the easiest and best way of cording.—BILLIE HUGHES.

TWO PRETTY SUMMER DRESSES

HERE is the ideal every-day dress—comfortable, easily made and laundered and withal attractive looking. The touch of trimming relieves its simplicity. Notice how economical this is of material.

No. 1719 comes in sizes 16 years, 36, 40-inches bust measure; size 36 requires 3 yards of 36-inch material with ¾ yard of 36-inch contrasting material. Price, 12c.

Just the features for which the stout woman looks are contained in this style. The lengthening panels, long front lines and full sleeves all make it becoming to the heavy figure.

No. 1677 comes in sizes 36, 38, 40, 42, 44, 46 and 48-inches bust measure. 4¾ yards of 40-inch material with ¾ yard of 20-inch contrasting material will be required for size 36. Price, 12c.

To Order:

Write name, address, pattern numbers and sizes clearly; enclose correct amount; send to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City. Don't forget to add 10c for the summer catalogue. It is a mine of ideas, and tells you what clothes you need as well as how to make them.

Better spring tonic is found in plenty of eggs, milk and greens than ever came from a bottle.

The "Pride" A Modern Bathroom, \$60

Just one of our wonderful bargains. Set comprises a 4, 4½ or 5 foot iron enameled roll rim bath tub, 12 inch roll rim enameled flat-back lavatory, and a syphon action, wash-down water closet with porcelain tank and oak post hinge seat; all china, index faucets, nickel-plated traps, and all nickel-plated heavy fittings. J. M. SEIDENBERG CO., Inc. 254 W. 34 St. Bet. 7th and 8th Aves. N. Y. C.

Reviewing the Latest Eastern Markets and Prices

NEWS FROM WASHINGTON STREET

HERSCHEL H. JONES

IN the New York wholesale produce market section, the core of which is "Washington Street," or "the Street," as it is sometimes called to distinguish it from "the docks," conditions are always changing.

Cucumbers which had been quite scarce and bringing as high as \$6 to \$7 per bushel basket, suddenly fell to \$3.50 to \$4 for the top quality and as low as \$1 per basket for ordinary. On Tuesday morning there were 50 carloads in the market, mostly from South Carolina.

New-crop Southern potatoes were in the heaviest receipts of the season on June 14. South Carolina Cobblers No. 1 brought from \$5.50 to \$6 per cloth-top barrel. Old crop white potatoes found practically no market unless fancy. Not enough sales of State potatoes to establish a market.

New Jersey white cabbage began to arrive in the market. The first shipment brought \$1.75 to \$2 per hamper of about 40 lbs. Crates of about 100-lbs. brought \$3.25 to \$3.50. Virginia cabbage was plentiful and declined to \$1 to \$2.25 per crate.

Green corn from Louisiana made its first appearance and sold readily at \$6 to \$6.50 per barrel of 8 to 10 dozen ears.

A few small lots of cherries were received from Hudson River Valley. Demand only fair. The market is heavily supplied with California cherries. Prices, per quart, various red sweet varieties, 5 @ 20c; red sour, 14 @ 15c. Four-quart baskets of early sweet varieties varied in price during the week from 75c to \$1.25. New Jersey red sours in 12-qt. baskets sold at \$1.75 to \$2.25. It is reported that there is an unusually good crop of cherries this season in the Hudson River Valley.

STRAWBERRIES UNCERTAIN

Fancy strawberries continued to be in active demand, but the market for ordinary quality was irregular and dull most of last week. Hudson River Valley and Long Island supplies increasing, and bringing highest prices. A few sales were made wholesale last week at 30 to 35c qt. for fancy. On June 14, Delaware and Maryland sold at 10 to 20c and Jerseys 10 to 25c, mostly 15 to 20c. Carloads of strawberries were received during the week from Tennessee, Kentucky, Oklahoma and Missouri, and because of ordinary quality sold at much lower prices than those from nearby sections.

LETTUCE FINDS WEAK MARKET

Receipts of lettuce from Orange County, N. Y., increased, but much of it was of small size and not well headed. The demand was limited. Abundant supplies from Long Island and other sections caused a weak market. Orange County lettuce sold mostly at 75c to \$1 per crate, with a few sales of fancy at \$1.12½ to \$1.35 and poor as low as 50c.

Long Island lettuce, romaine and spinach were plentiful and the market for them was dull. Wholesale prices in the farmers' markets were: Lettuce, best, per crate (32 quarts), 75c @ \$1; romaine, per crate, 50 @ 75c; spinach, per crate, 50 @ 75c; fancy, \$1.

The first green peas of the season from Long Island sold at \$3.50 per bu. bag in the farmers' markets last week.

BUFFALO VEGETABLE MARKET

Homegrown vegetables in Buffalo market were limited to ASPARAGUS, which sold last week at \$1 to \$1.15 per doz. ½-lb. bunches; CUCUMBERS, 75c @ \$1.25 box; PARSLEY, 40 @ 50c per doz. small bunches; RADISHES, 20 @ 30c per doz. bunches; RHUBARB, 20 @ 30c per doz. bunches; SPINACH, 30 @ 50c per bu.

BUNCHED STUFF SELLS WELL

In the farmers' markets in New York nearby growers found a fairly active demand for bunched vegetables. Following prices represent wholesale sales of farmers to retailers and jobbers: BEETS—Per bunch, best, 7 @ 8c; small, 5 @ 6c. CARROTS—Per bunch, best, 5 @ 6c; fancy, large stock, 7c; small, 4c. KOHLRABIES—Per bunch,

3 @ 4c. LEEKS—Per bunch, new crop, 4 @ 5c; old crop, mostly 3c. ONIONS—Spring, per bunch, 2 @ 2½c; fancy, 3 @ 3½c. PARSLEY—Per bunch, curly, 2 @ 3c; small stock, best, 2½ @ 3c. RADISHES—Per bunch, red tip, best, 2½ @ 3c; ordinary, 2c; white tip, 2 @ 2½c; fancy, 3c; white radishes, 2 @ 3½c. RHUBARB—Per bunch, best, 2½ @ 3c; fancy large, 3½c; few sales, 4c; small, 2 @ 2½c.

EGG MARKET CONTINUES POOR

Only a small percentage of the nearby eggs received direct from producers were of extra fancy light yolk quality. A few of the best nearby whites sold as high as 34 to 35c, but the great bulk of them sold wholesale within a range of 28 to 33c, chiefly 28 to 31c per dozen. Poor quality still lower, with some even at prices of fresh gathered firsts.

Extra fancy Jersey hennerly whites graded to uniform high quality moved a little more actively toward the end of last week at top prices of 38 to 40c. Small lots of fancy brown eggs from nearby sections brought relatively high prices, with extra fancy Jersey hennerly browns quoted at 36 to 37c.

General receipts of eggs continue heavy for the season. Accumulations

ceipts of butter in the first three days of last week were about 11,000 tubs greater than in the same period in the week previous.

The active offering of foreign butter in the New York market is undoubtedly having considerable effect in holding down price levels. Over 20,000 casks of Danish butter are reported to have been purchased by New York merchants for shipment within a month. Holland has shipped 500 casks of unsalted butter so far and other shipments are in transit. We are beginning to get a little butter from Argentine. The Baltic countries are inquiring as to possible outlet for their surplus production of butter here this year.

CHEESE HOLDS STEADY

State whole milk flats, fresh, average run, 24½ @ 25c per lb., flats, held, average run, 28 @ 28½c.

SMALL BROILERS NOT WANTED

The market for broilers continues active. Large size colored stock and large leghorns are in good demand. The supply of white leghorn broilers is increasing, however, and the general run of leghorns sold at 40c lb. The

active on low grades of hay as Manhattan points.

The prospect for the hay crop this season continues rather unfavorable in the East. It is impossible, however, to be certain of a hay shortage because of conditions this early in the season.

CASH GRAIN QUOTATIONS

Cash grain quotations June 15 were as follows:

New York: Corn, No. 2 yellow, \$1.02; No. 2 mixed, \$1.01½; No. 2 white, \$1.02; oats, No. 2 white, 55c; No. 3 white, 53 @ 53½c; ordinary white clipped, 53 @ 54½c.

Chicago: Wheat, No. 2 hard, \$1.13½; corn, No. 2, white, 84 @ 84½c; No. 1 yellow, 84½c; No. 2 yellow, 84½ @ 84½c; No. 3, 84c; oats, No. 2 white, 44 @ 45½c; No. 3 white, 43 @ 45c; No. 4 white, 43c; rye, 73c; barley, 62 @ 64c.

WOOL MARKET UNCHANGED

There was no change in the wholesale prices on wool last week. The market was slow. New York State fleece wool, unwashed, sold per lb. at: fine, 50 @ 51c, ½ blood, 54 @ 55c, ¾ blood, 54 @ 55c, ¼ blood, 52 @ 53c; low, ¼ blood combings, 45 @ 47c; common and grade, 36 @ 38c. Farmer's lamb skins, 70c each; packer's lamb skins, \$1.19 each.

NO MARKET FOR BEANS

There was practically no trading in dry beans in the New York market last week, and quoted prices continued as follows: Domestic, Marrow, choice \$10.75 @ 11, fair, \$10.25 @ 10.50; pea, choice, \$7.75 @ 8; fair, \$7.25 @ 7.50; medium, \$8; small white, \$7.25 @ 7.50; red kidney choice, \$8.15 @ 8.25; fair, \$8; white kidney choice, \$9; fair, \$8.50 @ 8.75.

OSWEGO BERRY CROP LATE

The strawberry crop will be later in this county than in many years, according to several growers. Early berries are now coming into blossom, and with ordinary warm weather it is not expected that many berries will move to market before the third week in June. Blossoms were injured to some extent by frosts in the latter part of May. The fact that the plants were so backward saved many from more serious damage. Cherries suffered considerable with the frost. According to F. H. Bond, fruit specialist of the county, a count of Montmorency cherries showed that 65 per cent of the buds were dead. The amount ranged all the way from 20 per cent in some orchards up to 90 per cent in others. Thus far no damage is apparent in pear or apple orchards, although the heavy frost was experienced when they were in full bloom.

Quotations From Eastern Markets

The following are the prices at which farm products of special interest to eastern farmers sold on June 14:

Eggs, Nearbys (cents per dozen)	New York	Buffalo	Phila.
New Jersey hennerly whites uneanded, extras...	38 @ 40
Other hennerly whites, extras...	36 @ 37

Hogs, Yorkers...	7 @ 7½	6 @ 7½

of reserve stock are greater than at this time last year, and the market generally is pessimistic as to results. Speculative buyers are now interested only in prices much lower than previously. Total receipts in first three days last week were nearly 10,000 cases greater than in same period the week previous. It is reported, however, that the production is falling off in some sections due to hot weather.

As the weather gets hotter, especial care should be taken to get eggs promptly to market. Pending shipment eggs should be kept only in a cool, dry place.

DAIRY PRODUCTS FIRM

Wholesale prices on butter were only ¼c lower last week than the week previous. Buyers for cold storage have a tendency to hold off purchasing in anticipation of somewhat lower prices. The present prices, however, are lower than was expected a few weeks ago, and there has been a fairly steady movement into storage. Creamery extras, 92 score, sold chiefly at 38½ @ 38¾c, although the top quotation on June 14 declined to 38¼ to 38½c. Some buyers are paying 39½ and occasionally 39¾c per lb. for high-score butter. The amount of cold storage butter on hand in New York City on June 14 was 4,148,475 lbs., compared with 3,400,700 lbs. on the same date last year. The total quantity on hand in the four large markets of the country, however, was about 4,000,000 lbs. short of last year. Re-

very small broilers are not wanted, however, and bring only 25 @ 35c lb. Following were wholesale prices on other broilers, June 14: Colored, large, 50; colored, small, 45c; white leghorn, fancy, large, 42c.

Rabbits, live brought 25c lb.; old roosters, 12c lb.

DRESSED CALF SUPPLY LIGHT

Receipts of country dressed veal calves were light last week, but trading was slow and really choice calves were in very small proportion. Dressed calves of coarse quality but of good weight sold slowly at unsatisfactory prices with sales toward the last of the week chiefly at 14 to 15c per lb. Dressed lambs are still arriving in small quantity with light demand and sales mainly at \$3 to 8 per carcass.

Demand was fairly good for live calves and prices were steady. Prime veals were in greatest demand and sold at \$12.25 to 12.50 toward the end of the week. Some fairly good lots of live calves sold at \$11.50 to 12.

HAY MARKET SLIGHTLY BETTER

Because of light receipts of hay, market at New York advanced and held firm last week, although trade was not very active. Considerable hay is now coming in by Catskill boats, mostly of low grades and some sales of shipping or No. 4 were down to \$20 per ton. No. 1 timothy is very scarce and could be quite readily sold at \$28. No. 2 is also firm.

Brooklyn markets are not quite as

The Cooperative at Accord

How a Successful Local Plant was Established

THE village of Accord is the center of a successful poultry community in Ulster County, New York. It always was a progressive town. Two years ago they organized a cooperative feed house of their own. This year the association did a \$150,000 business. It showed them that they could put across something big.

During the last year or about a year ago, they were surprised to learn that only one other town in New York State surpassed them in the amount of eggs that were shipped out by rail. They then realized that they were a poultry community.

The local poultry club broadened out and its members came from both ends of the Rondout Valley to attend the meetings. Not only did it have lectures by visiting specialists, but it introduced a round table discussion of troubles that they were experiencing. At first they were typical of any movement of that sort. They were all ready to listen but no one was willing to admit that he never had any troubles. Finally a few of the most progressive men broke the ice and then they became relieved to find that they all had some problems to contend with.

Individual Selling Unsatisfactory

At a meeting of the local poultry club last July the question was brought up, asking how many members enjoyed a premium over the top market quotation. There was an awful silence and finally a few of the braver members admitted that they formerly did, but recently they had found it rather difficult to obtain. It soon became apparent that market conditions were similar to the status of the "old gray mare"—they ain't like they use to be! From the discussion that followed it seemed that no one was entirely satisfied with his returns. A few years back it was comparatively easy to take a train to New York and by visiting a few dealers to come back with an agreement that called for two or three cents over the top quotation. That time has passed, and the market that stands out as distinctly good is seldom held for any length of time. Either a competitor underbids your proposition or the steward is sugared. Then follows the usual run of letters to the effect that the quality of the eggs was poor, too many were being broken, and besides they were overstocked at the present, so would you kindly discontinue shipping until further notice? Yes, they had all had experience like that.

Perhaps every community has some one who is capable of leadership and willing to shoulder the responsibilities that come with it. Accord was extremely fortunate to have such a person in Mr. Walter Voight. He was responsible for the undertaking of the grain cooperative idea. He carried it through the critical period and turned it over a complete success. As president of the local poultry club, he saw the possibilities of a cooperative marketing of eggs. The question was brought up in August and the first pool of the newly formed Rondout Valley Poultry Association closed on the 16th of November.

None of the marketing authorities approved of the idea. They all thought that cooperation to be successful must be absolutely necessary, and that the producers were too close to that greatest of egg markets—New York. At any rate, a canvass of the attendance of one of the meetings showed that the majority were willing to sign contracts to send all their eggs to such an organization for one year. From that time on, things moved rapidly. A good sized building was erected, where the eggs were to be graded, candled and packed.

Had Everything But a Market

November 9 was a big day. The doors were officially opened to receive eggs. Mr. Voight with an assistant did all the work involved. Like many a local marketing plant they found that even though they had a brand new packing house, labels, and even eggs, they had no market for them.

By CRAIG SANFORD

In the contract that the members had signed it was stated that they were under obligation to tell of any private market that they had formerly shipped to or of any house that they had heard were responsible men. This rule was put into effect and the information was investigated with the result that several good small markets were secured. These helped to introduce the eggs in various quarters. In the meantime sample cases were shipped to different houses.

A Product Equal to the Best

It was not long before the dealers who handled the eggs from Accord learned that New York had light yolked eggs which were just as heavy and sound as the eggs from New Jersey. When they reached the retail market they were usually sold as Jersey eggs, since advertising has created a demand for the latter. The New York market will pay a premium for the light yolked eggs and many New York poultrymen are feeding white cornmeal in place of yellow, and observing other factors that influence pigmentation. Vineland first acquired the reputation of having light yolked eggs.

Gradually it became apparent that New York eggs had all the qualities that were hitherto thought only found in Jersey eggs. The dealers were unwilling to drop what had now grown into value and were selling all their good nearbys for Jersey eggs. They state that their eggs have light yolks, that they weigh up as heavy as any pack on the market and that the grading is surpassed by none. The real test of the situation is that the eggs are shipped as such with instructions to return if unsatisfactory. They have never had a case returned. The eggs talked for themselves.

In regard to the methods of assembling the eggs, all members who previously shipped from Accord bring their eggs directly to the cooperative. Collections are made by auto truck at points from which eggs would have been shipped if the cooperative had not existed. The new pool each week starts on Friday morning and closes the following Thursday night. Payment for the eggs shipped that week is due by Tuesday of the next week and checks for the members are mailed out the next day.

Working Under Pressure

At the present time, when the market is glutted and the spring surplus is rolling in, the cooperative is selling most of its eggs at a premium and none below the quotation for that grade of eggs. They have now a staff of six people in the packing house. The first pool had only 28 cases, the last 223.

The organization costs are only two cents a dozen. And as the organization is only five months old they will be putting through more efficient methods gained only by experience, and enable a surplus to be laid aside. Other costs, such as express and commission, bring the total costs to about 3 1/4 to 3 1/2 cents per dozen. The average shipper outside of the organization has been receiving several cents under the net price of the association. There seems to be no doubt around the section as to whether it pays. It is an organization which, as the opportunity presents itself, will enter into sidelines that are profitable.

BABY CHICKS

30,000 Chicks weekly for June, July and August

Hatched by experts with 13 years' experience in one of the largest, finest and best equipped hatcheries in the State. 80 per cent of our March, April and May orders were from old customers, and orders for thousands of chicks were refused owing to insufficient incubator capacity. Cut For Number "One"

Produce Better Hay By Harvesting at the Right Time

THE United States grades for timothy hay are numbers 1, 2, 3, 4 and sample. When we stop to consider the difference in market price for these various grades it would seem that farmers should get busy and produce better hay or get out of the business. All the large terminal market reports show that No. 1 hay brings at least two dollars more per ton than No. 2, and in many smaller markets the difference is as much as three to five dollars per ton. As we go down the scale from No. 1 to sample, the difference in price is relatively much greater, and in fact the lower grades are hardly salable at any price. No. 1 hay is the grade that is mostly in demand to-day and there is less of it produced for market than any other except possibly No. 4. This is shown by the "Market Reporter," which states that out of 387 cars of hay inspected during March; 3 per cent was No. 1, 33 per cent No. 2, 50 per cent No. 3, 1 per cent No. 4, and 13 per cent sample. Please notice that 64 per cent, or almost two-thirds were of the lower grades, Nos. 3, 4 and sample, which brought from seven to fifteen dollars per ton less than No. 1.

Only 6 per cent of the certificates issued under federal grades showed as much as 5 per cent of weeds and other foreign material. Of the hay made sample grade, less than 8 per cent was due to the presence of 25 per cent or more foreign material, the amount necessary to throw the hay into sample grade according to United States standards. Therefore, if, out of this very large amount of low grade hay, there was a relatively small percentage of weeds and foreign material, cutting at the wrong time and bad conditions such as objectionable odor, mold, must, moisture, or heating must have been largely responsible for the low grades.

The sample on the left shows timothy in bloom, the time to cut for No. 1 hay. On the right are mature timothy heads, shattering, which, cut at this stage make No. 4 hay

reached. Grades, time of cutting, and color percentages are shown in the accompanying table:

The table shows that in order to get No. 1 hay, timothy must be cut in full bloom. Farmers who have large acreages should begin to harvest the hay so that most of it will be cut at this stage rather than later, which is the usual custom and having most of it fall into grades 3 and 4. The writer saw thousands of acres of hay last season that was not cut until the seed was shattering from the head, and the leaves were all brown and falling off, thus producing a hay that to-day does not have a value that would warrant hauling to market. Therefore, it is standing in the barns where it will stay or be fed to cows.

There are thousands of tons of timothy hay stored at the present time in central New York, of such low quality that dealers will not buy it. Central New York is one of, if not the leading, timothy hay producing areas in the country, but dealers in that region state that No. 1 hay can hardly be found; indeed not enough to supply the demand. Therefore, they are combing Ohio and Michigan for the better grades. The extra freight rates from points in these States over central New York points to the eastern hay markets would mean in many cases the difference between profit and loss.

For Milk or Market

When presented with the facts above, many producers console themselves by saying they are not raising hay for market, but for home feeding, principally for milch cows. A very good excuse but no argument. The fact of the business is that thousands and thousands of tons of New York hay are put upon the market annually and at present at least, most of it is of the lower grades. But even though it is fed on

Timothy Maximum Clover 5%	Latest Time of Cutting	Maximum Percentage of		
		Brown Leaf Surface	Brown or Bleached Heads	Bleached or Off-Colored Stems
U. S. No. 1.....	In full bloom.....	40	2	5
U. S. No. 2.....	Half seed in dough.....	70	10	20
U. S. No. 3.....	2/3 seed mature.....	90	35	50
U. S. No. 4.....	More than 2/3 seed mature	100	100	100
U. S. Sample...	Hay of the class or sub-class not coming within the requirements of any of the numerical grades or which has been threshed or contains 25 per cent or more of foreign material or has any objectionable odor, or is heating, moldy or musty, or is otherwise of distinctly low quality.			

Although weeds, foreign material and kinds of plants in the mixture have something to do with the grades, it is and should be generally recognized that color is the pre-eminent factor that sells hay, and due to this the United States grades are based almost entirely upon this factor. By careful analysis of a very large number of samples of different grades, percentages of brown leaf surface were determined of hay cut at different times or stages. A direct correlation between brown leaf surface and stage of maturity was found. Cutting hay in the "first" or "second," "bloom" or "bloom," is like planting corn "in the moon"; there is nothing to it. Corn should be planted in the ground and hay should be cut when a certain stage of development is

the farm that produces it, experiments show that much greater feeding value and only slightly less yield are obtained when the hay is cut from in full bloom to beginning of dough stage. Besides, timothy is not, under any condition, a suitable roughage for milk production. Milk producers trying to grow their own roughage might better produce No. 1 timothy hay for market and buy clover or alfalfa from their neighbors if they can't raise these legumes.

Although there are some excuses, such as weather, shortage of labor, etc., for producing low grade hay; there are no sane arguments for it, especially when the demand is for the best and there are definite standards to go by to produce hay of the highest quality.

Thresh Your Own Grain with a New Racine Thresher

EVERY day you have to wait for the threshing crew after your grain is ready to thresh is likely to mean a big loss. Grain left in the shock is subject to shattering by wind and storm, will sprout if it is wet, the birds and insects destroy it, and the shocks are often blown down.

Very few, if any, of these losses are necessary. With your own small thresher you can thresh when your grain is ready—no delays, no losses from rain, wind, birds, and insects. You can thresh with your own help or exchange men with a near neighbor. With the grain threshed early you can sell it when the market is best and at the same time you have the added advantage of having your fields cleared early for pasture or plowing.

A New Racine 20 x 32 or 24 x 40 thresher is the machine you want. It can be operated with the average 20 to 30 h. p. farm tractor.

Talk to the McCormick-Deering dealer about New Racine Threshers!

LOOK AT THE EXPIRATION DATE ON YOUR ADDRESS LABEL

If your subscription has expired, you can show your appreciation of our courtesy in continuing to send you the American Agriculturist, by favoring us with your renewal at once. There is no question as to your needing every coming issue of American Agriculturist, because some of the future numbers will contain facts that you would not willingly miss for any amount. The worst kind of economy in the world is to save \$1 by not subscribing for American Agriculturist and thereby losing \$10 or \$100 or even \$1,000 by not having the information that will be given in the next 52 issues of American Agriculturist. If you were a doctor, you would find the best medical journal indispensable. If you are a real farmer who is out for 100% success and not merely a bare living, you owe it to yourself and family to read every coming issue of the American Agriculturist so that you can keep abreast of the times.

SPECIAL BARGAINS!

Fifty-two issues of American Agriculturist for only \$1 is a bargain, but we offer you even still greater value for your money if you accept one of the following special long-term bargains—

- 2 years for American Agriculturist only \$1.50
- 3 years for American Agriculturist only 2.00
- 5 years for American Agriculturist only 3.00

It has probably been merely an oversight if you are in arrears in your subscription. Before you forget it, mail your renewal for one of the above bargains and show your heart is still with us in our fight for your success and happiness.

MAIL THIS COUPON TODAY

AMERICAN AGRICULTURIST, 461 Fourth Ave., New York City. I appreciate your sending me American Agriculturist after my subscription expired. Here is my check (or money-order) for renewal for.....years more.

The Rural Health Problem—By Paul Luttinger, M.D.

The Aftermath of the War

A Summary of the Terrible Situation in Europe To-day—A Radio Message

DURING the early part of the Great War, we occupied seats in the galleries set apart for neutrals and were deeply interested in watching the various gladiators, in the guise of nations, enter the arena and fight each other with great vim, determination, and an inexorable hatred and barbaric vindictiveness. The outcome of the struggle was quite doubtful, and as the prospect of one or the other becoming victorious, constantly varied, the interest of the observers was sustained throughout the performance. In fact, no opera, drama, or moving picture ever had so many thrilling events to fasten the interest of the observer. A large part of our people led by such men as Col. Theodore Roosevelt, General Leonard Wood, and New York's Mayor, John Purroy Mitchel, were chafing from the very beginning to enter the lists and participate in the fight. While a large part of the American community thought that it was not our concern and that the European powers would have to settle this dispute amongst themselves, we felt that the unavoidable clash between the military establishments of Europe had come at last and that these countries were simply paying the penalty for believing that disputes must be settled by force instead of by arbitration or justice. It was hoped that the United States be allotted the grateful role of peace-maker, and as such enter the arena, stop the fighting, and adjust the differences between the contending parties, and establish a permanent peace which would prevent future wars.

It was only when Germany disputed our right to the free use of the sea, and also had the audacity to suggest our restricting ourselves to one ship per week, confine it to the one Germany would suggest, and finally proclaimed her right to a free and unrestricted use of the submarine as a method of warfare, that our patience became exhausted. We ceased being neutrals, threw off our indifference, stripped for action, and entered the contest with as great a vim and determination to win as any of the original participants. From indifferent onlookers we were suddenly converted into enthusiastic and vigorous combatants. Our entrance threw the balance of power on the side of the allies and assured the victory. President Wilson through his proclamations put the dispute on a higher plane and showed that it was not a mere struggle for commercial advantages, but that it was a fight for civilization, and that it should be made a war to end war, and to make the world safe for democracy.

The great contestants had dug each other into their trenches and were waiting for the slow process of attrition to determine the contest or reduce both of them to a state of exhaustion and create a stale-mate. The western line of battle extended from the Swiss boundary to the North Sea. The entire Balkans were aflame; Russia was still active, both on the offensive and on the defensive; the British were valiantly fighting in Palestine to retrieve their defeat at the Dardanelles. Such international commerce as remained was at the mercy of the German submarines.

By HENRY MORGENTHAU, SR.

Ex-Ambassador to Turkey

We fought with the allies a great and noble fight—our achievements amazed the world by their splendor and gigantic proportions—no short article such as this can even attempt to do justice to it.

The next act in the drama was that of the Armistice and the Peace Conference. Although we took but a minor part in the war itself (owing to our late entrance) we took a most important part in the arranging of peace. This was largely due to the fact that we wanted no part of the territory of any

and reduced to a population of six million, proved such a pathetic figure that all her former enemies became sympathetic and have combined to give her another chance, not as a great empire and world-power, but as a State equivalent in size, but not in importance to Illinois, without however, the advantages of free intercommunion with forty-seven other States.

Turkey, at first, totally demoralized and deprived of Arabia, Mesopotamia, Palestine, and Syria has now defied the decrees and treaties of the allies and is struggling desperately and defiantly for her existence.

Germany, which but five years ago defied all of the European powers is to-day prostrated—and her currency in a downhill race has passed Austria and Poland in its course, and like Russia is reaching the vanishing point, and is now under France's military heel. It is almost impossible to realize the tremendous contrast of the present positions of these countries with those they held six years ago. The fear of German world domination has been replaced by the fear of France's military supremacy on the European continent. The forty million Frenchmen, having at present the best equipped and best officered army in the world, are about convincing Germany and her former allies that she is determined, single-handed if necessary, to see that those provisions of the Versailles Treaty, which cover the payment of her damages and her security for the future will be carried out.

Neither Germany, Great Britain, Italy, nor the United States ever suspected that France would possess the tenacity that she has recently displayed. It has taken them all this time to realize that it was not a case of French bluff but quite the contrary, *idée fixe*—what we would call in English, grim determination to the bitter end. Unfortunately, most of the countries are absorbed in attending to their own affairs.

The United States Government publicly so acknowledges and has repeatedly asserted its belief in isolation and non-interference in European affairs. Our European

friends accuse us of having failed to complete the performance of our part in this great world drama and of having quitted before the completion of the last chapter which was not the Armistice, but the secure establishment of peace.

Great Britain is so completely engrossed in absorbing into her empire the territories that fell into her possession since the beginning of the war, and also in pacifying her discontented and unemployed laboring classes, that she, too, is abstaining from active participation in European continental disputes.

It is generally believed that the present Russian Government has to restrict the use of her military forces for defensive purposes and that any offensive campaigns even against Lithuania or Poland, and certainly any conjunction with Germany would cause its downfall, so that at present it looks as though France, with Belgium's approval and her friendly relations with the Little Entente, jointly controlling an active army of about two millions, is going to dominate the European situation and intends to exercise her

Great News!

WE are very glad to announce that American Agriculturist has made cooperative arrangements with the New York City office of the New York State Department of Farms and Markets and the American Telephone and Telegraph Company's broadcasting station WEAf, whereby we will furnish from the WEAf station a regular radio market service. Last minute prices direct from the New York City markets will be broadcast from WEAf station on our program, every day except Monday and Saturday at 10:50 A. M. standard time.

The State Department market experts study the market conditions and prices every day and every night. The ability of these experts insure absolute accuracy, and this arrangement will give every farmer, if he so desires, the very latest change in the market so that he can govern the shipments of his products accordingly. In every neighborhood there is now at least one radio. Make arrangements with your neighbor who has that radio to telephone you the information. If you can get these reports and act on the information, they will save you hundreds of dollars. The greatest problem of farmers is marketing; the greatest problem of marketing is to avoid gluts; accurate up-to-the-minute information will help to keep your stuff off the market when the market is over supplied.

Remember that the time is 10:50 A. M. Men folks will be in the field at this time, but the women can take down the information as it comes out of the air. Special blanks on which the reports may be copied as you listen in will be furnished by American Agriculturist and the State Department free of charge on application.

This arrangement is an outgrowth of the farm radio program which American Agriculturist has been conducting for months with WEAf. Farm speakers and experts, the best in the country, broadcast every Wednesday evening at 6:50 P. M. This service will also be continued.

Tune in at 6:50 Wednesday evening for the best farm speakers, and at 10:50 A. M. Tuesday, Wednesday, Thursday and Friday for the latest information and prices of the greatest market in the world. The wave length of WEAf is 492 meters. We believe this is a real opportunity for the broadcasting station, the Department of Farms and Markets and American Agriculturist to render extremely valuable service. Tune in and use it—and tell us how to make it better.—The Editors.

of the defeated countries. We had no axes to grind as to future arrangements and our disinterestedness was apparent to all. Unfortunately some of our most important requests were disregarded, and instead of arranging for reparations that could be met by Germany, a method was adopted which instead of creating peace has left the relations of many of the countries towards each other in a most inimical state, if not actually at war.

It is difficult for us Americans to understand the tremendous effect the dissolution of four empires has upon the general condition of the world, especially where the fate of each one differs so widely with that of the others.

Russia, although an ally of the victors of the war, was ruined through its experiment of Bolshevism, and is now suffering the consequences of her futile attempt to apply the iconoclastic methods of a desperate revolution instead of attempting by saner and legal methods to correct the evils under which she was suffering.

Austria, deprived of much of her territory

The Rural Health Problem

A Doctor Tells Why Country Physicians Are Growing Scarce

By PAUL LUTTINGER, M. D.

THE numerous letters in the American Agriculturist suggesting various remedies to the dwindling of country physicians, prove that the problem of medical service in rural communities has become a burning question and that its solution is becoming increasingly difficult.

During his first term, Governor Smith had realized the seriousness of the problem and had directed the State Department of Health to make a thorough survey of the situation. At the beginning of his present administration, realizing that there was a considerable difference of opinion regarding the matter, he invited some two hundred physicians, representing the medical societies and the medical colleges from all over the State, to a conference on several medical questions. The conference met on February 26, 1923; this being the first time in the history of the Empire State that the chief executive officially recognized the interest of doctors in proposed legislation that might affect them. The conference appointed a committee for the purpose of studying the rural health problem, among other questions, who made a report to the Governor within a short time.

This report, owing probably to the short time at the disposal of the committee, is somewhat disappointing. Basing themselves on the statistics collected by Dr. Hermann Biggs, the State commissioner of health, they reach different conclusions. The extent and urgency of the problem are minimized and the wisdom of passing legislative measures for the subsidy of rural health agencies is deprecated. As it often happens with officials of organizations, those representing the State medical society are inclined to be conservative and seem to be morbidly afraid of such catch-words as paternalism, State-socialism, etc., although there is little reason to be afraid of any change, no matter how radical, when one reflects that the average income of physicians in this State is about \$900 per year. Furthermore, from the farmer's point of view, if the Federal and State Governments may establish experimental stations for the improvement and sanitary care of his livestock and crops, there is no earthly reason why provision should not be made for the prevention of disease to himself and his family.

Governor Smith, therefore, acted with rare wisdom, when he recommended, in his message to the legislature, that steps be taken to remedy the rural health situation at the earliest possible moment, and that subsidies be granted whenever and wherever necessary.

Factors Involved in Rural Health Problems

A thorough study of this problem shows that it is not peculiar to New York State alone; nor to the rural districts of the United States, exclusively. Every State in the union is confronted with the same difficulties. Pennsylvania has taken legislative action in

the matter which unfortunately has degenerated, in many instances, into a source of political preferment. New Hampshire has just passed a law by which the various counties are to establish hospitals for which the residents are to be taxed. European countries, for a number of years, have had to contend with the rapidly diminishing number of country practitioners and a recent report in the British Medical Journal shows that the problem has entered an acute stage in England.

Hitherto, those who have tried to remedy the evil, have taken in consideration only some of the factors which keep physicians

poor and the middle class. Nowadays, the wealthy and even the middle class, thanks to the improved methods of transportation, go to the city and even to the metropolis for the cure of any ailment which seems to become more serious than an ordinary cold. Those depending on the rich, such as poor relatives and servants are also attended by the city physician or hospital.

The cost of living was formerly lower in the country; but this difference has disappeared: This is due to the fact that clothing, furniture and other household necessities have to be fetched from the city and that the cost of ordinary food is about the same. Any article of food to vary the monotony of the rural diet must be brought from the city,

The fees paid the country practitioner are lower than those paid to his urban colleague, besides, he is supposed to furnish his own drugs in the majority of cases. Furthermore, he loses valuable time doing the work that the nurse and orderly are delegated to do in the city. As an added drawback may be mentioned the fact that his bills are not paid promptly, while the city practice is a 90 per cent cash practice.

The average farmer is not prone to call the doctor frequently while the city physician has a lucrative practice from slight or even imaginary ills.

Years ago, the sanitary conditions in the country were better than in urban communities, or rather city conditions were worse than those prevailing in rural districts. The reverse is true now, as may be gathered from the statistics collected by the State department of health. While in former times the farmer boy was warned against contracting disease in the city, the vacationists are now vaccinated against typhoid fever before they go to the country. The water supply, the sewage disposal and the unsanitary conditions of many homes, are sources of constant danger to the country physician's family.

Hospital accommodations are almost non-existing in most of the rural communities and the physician knows that in case of serious illness or accident to his family or himself, he would have to be transported to the distant city, which means lessened chances of recovery due to exposure or shock.

Nurses are scarce in the country; consultants, specialists and diagnostic laboratories are found in the cities only. All this adds to the dread of sickness, not counting the extra expense that it may involve.

The schools in the country are of the grammar grade and the children must often go far to reach the "little house with the red roof." If he wants his children to receive a higher education, the doctor must send them to district high schools or still farther colleges. As an alternative he may employ expensive private tutors. In most instances

(Continued on page 542)

Keeping the Country Doctor

WE have had a number of discussions by our readers on the problems of medical service in the rural districts. These discussions were written by laymen. Here is an article from a doctor's standpoint. Do you agree with him?—The Editors.

from establishing themselves in the country. A thorough study shows that they are numerous; let us classify them:

Owing to the unfortunately shrinking population of the rural communities, the physician finds it increasingly difficult to gain a fair livelihood, without undue hardship. Why?

The doctor must spend a large amount of time visiting his widely scattered patients. This becomes especially burdensome in districts where the roads are bad and during the winter when the bad weather prevents communication altogether, or requires an expenditure of time entirely out of proportion to the compensation.

Only a Few Survive

It is true that there are still a few sublime souls, like the Dr. Brown, so lovingly described by Mrs. R. M. Roberts in a recent article in the American Agriculturist, who labor in the vineyard of the Lord without any thought of monetary considerations. But when ministers of the church themselves are insisting on getting a higher living, owing to the increasing demands made upon them by the exigencies of modern life, no one should expect the physician to be the only self-sacrificing individual in the community. It would be an injustice to himself and to those depending upon him. Even a young physician, just out of college, could not do it if he would, as he is usually heavily in debt for his college course; the expenses of a modern college course amounting to from \$5,000 to \$8,000.

A generation ago, the country physician not only had a larger population to draw from, but treated all classes—the rich, the

A Fourth of July Excursion

THE cultivating and the hoeing were pretty well caught up. The haying had not begun. To-morrow was the Fourth of July, and the boys were going on an excursion trip to faraway Penn Yan. Oh, boy, what a grand and glorious feeling it is after working for a year through the dull monotony of farm work without going anywhere or seeing anything, to go on an excursion farther away from home than you have ever been before!

The next morning the cows were hustled into the barn and milked. The chores were finished early, and by five o'clock breakfast was over and the boys ready to start. One of the farm plugs was hitched to the old buggy and down the valley they went ten miles to the nearest railroad station where they would catch the excursion train.

Can you remember when it was fun to ride on the steam cars? If so, you will appreciate the joy of the boys who had never been on the cars more than three or four times in their lives, as they climbed on the excursion train and rushed for fifty miles or more through the fine river valley. If you have lived all of your life, never having seen a body of water bigger than a mill pond, you will appreciate also the joy and wonder and anticipation of the youngsters when they boarded the excursion boat, ready to make the trip down one of New York's beautiful Finger Lakes.

If you were once a green, lonesome, country boy, you may perhaps be able to understand the feeling of awe and the little twinges of homesickness which they felt as they looked from their boat, off towards the east, and knew that between them and their home there lay many beautiful, but strange valleys bordered by an unknown number of ranges of hills. What a fearful feeling just to think what would happen if they should lose their excursion tickets and the few cents of extra change which they had in their pockets, and have to walk all the long and unknown distance home! Rapid transportation has come so fast with the automobiles, that few of us realize how long the country miles once were, or how small the radius within which

country people were confined even a few years ago.

If when you were young, you did not hear a band or an orchestra more than once a year, and were so starved for music that even an old mouth-organ sounded mighty good, you will know how fine the orchestra on the boat seemed to the boys when it began to play the songs and the tunes that were popular twenty years ago. Why is it that nowhere is music so sweet as on the water; or is it the holiday spirit which makes us like it so well?

So short is the life of most popular music, that out of the long list of songs and tunes which the boys heard the orchestra play that day, and which were being played, sung and whistled all over the land, hardly one is left to-day. One of these in particular had a lilt and a swing that ought to have given it longer life. How many of you can still whistle the tune the words of which went something like this:

The good old summertime, the good old summertime,
I'll hold her hand and she'll hold mine in the good old summertime.

So accompanied by the lilt of the music, the rhythm of the boat's propeller, and boyhood's happy dreams, they sailed away to Penn Yan, and back again to their train and so came at eventide to the livery stable, where the old horse had been patiently waiting all day to carry them home. How good the familiar scenes looked to them, for while they were gone only a day, it seemed a very long time indeed, for within that day had they not traveled far, and had there not been "strange lands and sights for to see." So ended a holiday and a Fourth of July always to be pleasantly remembered.

In these modern days when the automobile, the movies and the radio have brought the whole world to the farmer's front door, our boys take trips and see sights beyond the wildest imagination of boys of a generation ago; but we sometimes wonder if the very abundance of travel and entertainment does not lessen enjoyment and appreciation so that a modern youngster can never know the real fun of an old-fashioned once-a-year holiday excursion.

Farm Prices Slowly Rising

NOT before in years have farmers paid so much attention to the trend of prices of farm products. These prices are improving somewhat and the question in everybody's mind is whether or not this improvement is going to continue.

On this point, G. F. Warren, the farm economist of the New York State College of Agriculture, said in a recent statement: "Of the five most important agricultural products—butter, cotton, hogs, beef and wheat—the first two are now as high as the general price level. Hogs, beef and wheat are still far below the general price level. There is an excessive production of hogs. Therefore, it is to be expected that hogs will be low in price for some time. The grain products usually rise in price about two years after prices of industrial stocks rise. The reaction from low grain prices and the high demand for grain to feed animals will probably make high priced grain next year, unless weather is unusually favorable this summer."

This information will be interesting to dairymen who purchase large supplies of cattle feed. Since Dr. Warren issued this statement, the government crop reports show that, with the exception of oats and barley, the principal grain crops of the country will be smaller this year than last. The reduction in wheat is estimated to be about five or six per cent smaller than last year.

Dr. Warren further points out that the most striking change in New York farm prices is in the price of milk. The pool price

of milk is now 59 per cent above the pre-war average. A year ago it was only 9 per cent above the pre-war average. Of twenty-four farm products in New York, six are as high as the general price level. These are beans, butter, chickens, lambs, wool and cabbage.

"The purchasing power of New York farm products is now 88; last month it was 82; last October it was only 78. This shows that farm prices are gradually being adjusted to the general price level."

Eastern Apples to the Front

IN looking over an exhibit from the New York City Department of Markets recently, we were very agreeably surprised to note that New York State furnishes more than 45 per cent of the apples consumed in the big city. The State of Washington is next in line with about 25 per cent; Oregon sends 8 per cent; California, 3 per cent; Virginia, about 3½ per cent; British Columbia, 3½ per cent; and all other sources about 12 per cent.

It is practically impossible to buy eastern grown apples on the fruit stands in New York City. For this reason, one easily comes to the conclusion that nearly all of the apples consumed in the city come from the West. But even though New York and other eastern States are the deciding factors in the New York market, there are still too many western apples sold here to the exclusion of our first class eastern fruit.

It is for this reason that we are heartily in sympathy with the plans for the Eastern Apple Exposition and Fruit Show to be held in the Grand Central Palace, New York City, November 3 to 10. City consumers are going to have an opportunity through this exposition, as never before, to get acquainted with the beautiful and high quality eastern fruit; and the show, together with the publicity it will receive, will, without question, do much to increase the consumption of eastern grown apples.

For a Standard Rivet

THREE mowing machines, all of different manufacture, were recently being put in order on our farm to cut a large acreage of alfalfa. When we came to the cutter bars, we found that a different rivet was necessary for the knives of each machine. This lack of standardization of even the simplest and commonest parts of farm machines is absurd, expensive and annoying. Farmers will bless the day when the manufacturers simplify and standardize the parts of different makes of farm machinery.

Buy Your Coal Now

FARMERS are large consumers of coal. Last year because of the coal famine, many farmers burned wood again for the first time in years, and unfortunately a good deal of it was green wood. This is just a hint to put in your winter supply of coal the very first time you get a let-up in the farm work this summer. There is no prospect of its being any cheaper; it may even go higher, and the authorities tell us that it will be mighty scarce again this coming winter.

Quotations Worth While

"Music is the common language of all nations and tribes. The man who knows how to play, knows how to reach the heart of anybody in any country, climate or condition."—BURLEY AYRES.

League Reports Big Year's Work

Delegates Optimistic as They Transact Business at Large Annual Meeting

THE annual meeting of the Dairymen's League Cooperative Association, held in Utica, N. Y., on June 21, maintained the record which the League has had for years of holding the largest and most enthusiastic meeting of farmers in eastern United States. More than 1,800 men were present, nearly a thousand of whom were delegates coming from every community in New York and five adjoining States where the League is organized.

The meeting was called to order at 10 A. M. standard time, by President George W. Slocum, of Milton, Pa. After the usual preliminaries, the reports of the president, secretary and treasurer were read.

In the president's report, he called attention to the immense amount of business which the association had transacted during the year. These figures are given in another place on this page. He explained to the delegates how the work of the association is assigned to ten principal departments, over which is a trained man responsible for the success of his particular specialty. These departments are production, sales and advertising, secretary's department, banking, accounting, engineering, traffic, legal, purchasing and general office management.

In speaking of the chief aims upon which the association was concentrating its effort, Mr. Slocum said: "We have selected these two lines of production in which your association has a distinct competitive advantage. Fluid milk first and evaporated milk second. This does not mean that future changes in marketing conditions may not lead us into other endeavors. For this coming year, however, our whole effort is being thrown into selling these two leading products. A year ago we had only 400 cans of direct fluid trade, while to-day we have over 8,000, and of this only 2,000 were obtained by purchase."

The president then proceeded to outline in some detail the work of each of the different departments. He called attention to the new trade mark "Dairy-lea," which the association has established and to the large advertising campaign which was being conducted. He said that the association recognized its responsibility as a service organization to the general public, especially to the consuming public.

"Our purpose," he said, "is not to fix the price of commodities which we have to sell, but so to work out the problems of distribution and marketing that the farmer will get a fair price for his milk and the consumer will get all the benefit of universal quality and service which orderly marketing can provide."

The president's reference to the New York problem is significant as an indication of what the association may have in mind as to its future activities in New York City. As to the future, he said, "this problem remains to be solved and we believe the League must become a larger factor in the direct-to-consumer business before it will have a sufficiently great influence on the metropolitan market to increase the farmer's net return. Your officers and directors believe this is the big problem which faces the

League and should be solved during the next twelve months."

In conclusion, President Slocum said, "In the history of mankind, are certain milestones that denote the time and the place where humanity as a whole took forward steps towards better living conditions, sometimes toward better understanding of spiritual matters and sometimes toward better economic conditions that vitally affect us. Such a forward step towards better economic conditions is now being taken throughout the land in the cooperative movement."

League Officers For 1923-1924

THE new Board of Directors of the Dairymen's League Cooperative Association met on Friday, June 22, for organization and election of the Executive Committee and officers for the coming year.

The officers are the same as last year, namely: President, George W. Slocum, Milton, Pa.; Vice President, John D. Miller, Susquehanna, Pa.; Secretary, Albert Manning, Otisville, N. Y.; Treasurer, B. M. Kilpatrick, Utica, N. Y.

The members of the Executive Committee are: George W. Slocum, ex officio; Paul Smith, Newark Valley, N. Y.; W. U. Rixford, Wellsville, N. Y.; F. H. Sexauer, Auburn, N. Y.; J. A. Coulter, Woodville, N. Y., Mr. Coulter is the only new member of the Board, who takes the place of John S. Petteys of Greenwich, N. Y.

Secretary Albert Manning of Otisville, N. Y., gave in his report the membership status of the organization. These figures are given elsewhere on this page. Mr. Manning also outlined the methods by which the cooperative association keeps in contact and works with its farmer membership.

B. M. Kilpatrick, the treasurer, reported that on March 31, 1923, at the end of the fiscal year, the association owned land, buildings and equipment to the value of \$5,950,767.99; mortgages standing against this amount were \$1,023,347.07; current assets of the association were on March 31, 1923, \$12,000,000, with liabilities of \$6,500,000. Mr. Kilpatrick said that the thirteenth check will give the members about \$633,000.

Farmers in Big Business

REPORTS of the officers at the annual meeting of the Dairymen's League Cooperative Association at Utica, N. Y., on June 21, show the following startling figures as to the vast amount of business which the Association did during the fiscal year ending March 31, 1923:

1. Total value of gross sales of fluid milk sold the dealers..... \$59,702,495.81
2. Total value of milk handled by the association's own plants..... 22,428,406.36
3. Total value of all milk sold by association... 82,130,902.17

This sum is more than \$20,000,000 greater than the total amount of business which the association did during the preceding year.

4. The total pooled milk handled by the association either in its own plants or sold to dealers amounts to..... 3,359,273.358 lbs.
Of this amount, the association handled in its own plants..... 793,040,638 lbs.

The association has doubled the amount of milk handled in its own plants.

5. The average net returns to producers was at the rate of \$1.83 per hundred pounds of 3 per cent milk at the 201-210 mile freight zone. This includes \$0.1376 per hundred pounds in Certificates of Indebtedness.

The total expenses of the association, including depreciation and advertising, amounts to an average of \$0.0695 per hundred pounds.

6. The Secretary's report showed that on March 31, 1923, there were 64,251 signers of the cooperative contract in 950 local associations. Of this number, slightly less than 45,000 were actually in the pool.

A business of this size conducted by farmers would have been beyond the wildest dreams of any farmer even ten years ago, but it is an indication that farmers are learning, as other business learned long before them, that both organization and concentration in large units are necessary for modern business success.—The Editors.

Two speakers kept the audience in a high state of enthusiasm during the afternoon session. Mr. John D. Miller, vice president of the association and president of the National Milk Producers' Federation, told the details of the activities of the nationally organized dairymen.

Speaking of the tariff on dairy products, Mr. Miller said: "Without going into the merits or de-merits of protective tariff, all will agree that as long as it is the established principle of the American people to have a high protective tariff, farmers should receive a protection which bears a fair relation to the protection of other industries. It violates every principle of justice for a farmer to buy his necessities in a highly protected market and sell his products in an un-protected market."

Referring to the statements of some milk dealers that "It is unethical for the Dairymen's League to market the milk of its members in the city," Mr. Miller demanded to know when, where, and by whom was the right of farmers to market their products surrendered.

The last speaker was John M. Kelley, of Wisconsin, vice president of the National Holstein-Friesian Association, and general counsel of Ringling Brothers Circus.

Mr. Kelley called attention to the fact, that farming does not pay and he placed the responsibility for this upon the farmer himself.

He said: "Not one farmer in a hundred realizes or understands the economic conditions of the country or of the world, and the fact that they are affecting intensely his welfare and his business. Farming has not paid because the farmer has failed to take into account the economic adjustment that make up profit and loss in every industry."

Mr. Kelley showed how the oleomargarine industry is supplanting the dairy cow. "In 1913, there were only a few thousand pounds of oleomargarine manufactured; in thirteen months, the manufacture had increased to ten million pounds."

The power and value of advertising in the dairy industry were stressed particularly by Mr. Kelley. He said that dairymen had entirely neglected the tremendous possibilities for the sale of their products on a health basis, while every other business was selling its products on terms which belonged to dairy products.

In a brief report upon the activities of the G. L. F. Exchange, H. E. Babcock, general manager, asked the voluntary business of the dairymen. "Volume voluntarily contributed saves," he declared. The convention later adopted a resolution recommending that dairymen buy their feed of the G. L. F.

Near the close of the meeting a resolutions committee of twenty-four, consisting of a representative from each of the twenty-four league districts made their report, all of which was adopted by the convention. This report follows:

Report of the Resolutions Committee

Every resolution presented to the committee was acted upon by the committee. The committee felt that...

Hay, Pastures, and the Condition of Cows

Also Some Pointers on Advertising and Selling Pure-Bred Cattle

By H. E. BABCOCK

DURING the past week my work has taken me by automobile from southern St. Lawrence County through Syracuse, Ithaca, Elmira, Harrisburg, Pa., and on down to Baltimore. As I drove I tried to observe as accurately as possible the condition of pastures and meadows.

It does not seem to me that I re-

seems to us, are now milking way beyond their normal capacity; some of them, which are so thin they weigh only about 800 pounds are milking 40 pounds a day on two milkings. It will be interesting to see whether we can maintain satisfactory milk flow with these cows and at the same time grow them into the size and condition which our experience has proven essential to good results.

If the editor will permit me, I am going to print a snapshot soon of one of these animals, showing her in her present condition and then from time to time I will relate the results we obtain.

We ourselves are divided as to whether the herd, thin and stunted as it now is, can ever be developed into a really profitable bunch of cows, despite the very evident signs of production which most of the cows have. Personally I think we can make some real cows out of them, but I believe it will take two years to do it, and I doubt if they will any more than pay their way after this first flush of production is over.

Selling Pure Breds

For the first time we are in a position to offer pure-bred Guernsey bull calves from cows with official records.

The Dam—See "Selling Pure Breds"

member ever having seen either in as poor condition as they are north of Harrisburg. Below Harrisburg and on down into Baltimore it was harder for me to judge because it was my first trip over the territory. In the North Country, however—referring to the great dairy section lying north of Syracuse and along the St. Lawrence River—pastures were very short and meadows seemed to have suffered from being continually frozen back. On the whole it seems to me that conditions in this great dairy section are such that milk production is bound to be lower than usual. I should think this would affect the price of milk, so that late summer and fall prices would be pretty good. Please understand that the above observation is simply my own unskilled analysis of what I saw.

I should say that at least 80 per cent of the cows I saw were in poor flesh. Normally with lush pasture, these cows would fatten up; on poor pasture they will gain only slightly and dry up rapidly. It has been my experience that cows that go out to grass thin particularly where they have poor pasture, are very unprofitable animals.

The only remedy for the combination of thin cows and poor pasture seems to be liberal grain feeding. From what I saw I should say that summer feeding of grain will pay, grain of good quality, not the cheap by-product feeds which so many dairymen use—if they use anything—during the summer months.

Practical Experience With a Thin Herd

On our own farms we are now getting some first-hand experience with thin, undernourished animals. We have just brought on one of the farms thirty pure-bred Guernseys, which are about the thinnest animals I have ever seen. In fact they were so thin that the boys refused to drive them through town until after dark. They have been turned into pasture in which the white clover and bluegrass is up to their knees. How such feed must surprise them!

The first reaction has been a marked increase in milk flow. These cows, it

pedigree of the calf and the official records of the cows in the pedigree is just what we would like to receive from an advertiser if we were inquiring about a bull. Whether it will prove what is wanted by the men who inquire of us, and will result in sales, is yet to be proven. We pass the suggestion on for what it is worth.

M. C. BURRITT AND DR. CHANDLER TO LEAVE NEW YORK STATE COLLEGE

At their meeting on June 18, the Trustees of Cornell University received the resignations of Dr. W. H. Chandler, Professor of Pomology and Vice-Director of Research in the New York State College of Agriculture, who leaves on June 30, to accept appointment as Research Professor of Pomology at the University of California; and of M. C. Burritt, Vice-Director of Extension, whose resignation will be effective December 31. Director Burritt leaves to take up the management of his excellent fruit farm at Hilton, Monroe County.

Dr. Chandler came to the New York State College of Agriculture from the University of Missouri in 1913, as a Research Professor of Pomology. He was advanced to the head of the Department of Pomology in 1915, when C. S. Wilson, the former head, became State Commissioner of Agriculture. When the Legislature created the position of Vice-Director of Research in 1920, Dr. Chandler was elected to this position.

Vice-Director Burritt was graduated from Cornell in 1908. He was elected to the staff of the College in 1914, giving up the editorship of the "New York Tribune Farmer" for the College position. He was State Leader of County Agricultural Agents from 1914 to 1916. He has held his present position since 1917, being the first person to hold a vice-directorship at the College.

In announcing their resignations to-day, Dean A. R. Mann stated "The resignations of Vice-Directors Chandler and Burritt take from the State College two men of great ability and merit, who are held in high esteem and confidence by their associates."

"Dr. Chandler is recognized as one of the leading pomologists in America, and his scientific contributions have been not only highly beneficial to the fruit-growing industry of New York, but also of great value to scientists working elsewhere in this field. He leaves Cornell because of the superior

The Sire—See "Selling Pure Breds"

This brings us face to face with the advertising problem, and with the further task of answering inquiries resulting from advertisements.

After studying the advertisements which reach us and the answers to letters of inquiry which we have received, we have decided as a trial to rely very largely on pictures, pedigrees, and production records, both in our advertising and our answers to inquiries.

We have photographed the sire of our calves, the dams, and the calves themselves. These pictures we have grouped so as to show the sire, the dam, and the resultant calf. The illustrations on this page show the grouping. Such a group of pictures, showing the entire family, together with the

Buckwheat The Stand-by

A Crop That Will Help Out When Others Fail to Catch

"Buckwheat cakes and Injun batter
Make you fat and a little fatter"—

IT has been said of buckwheat that it has had a large part in helping to ruin the poor hill lands of the East because it is easy to get a fair crop of this grain on acid soil, with comparatively little labor. Buckwheat has been accused of being the shiftless farmers' chief crop, and because of such farmers' dependence upon this crop, they have often been called "buckwheaters".

Notwithstanding this, most good farmers in the Northern and Eastern States have a sneaking liking for buckwheat. It is an old stand-by. Since the earliest times when the cut worms and the crows got the corn, it was still possible to save the day by plowing it up and sowing buckwheat. If the potatoes failed to come up or if the rush of work or bad weather made it impossible to get in the early spring crop, there was still a chance of getting something from the land by falling back on buckwheat.

The name buckwheat seems to be a corruption of the German *buch weizen* meaning beech wheat, which was given to the plant because the shape of the seeds is similar to that of the beechnut, while their food constituents are similar to those of wheat grains. Botanically buckwheat is not a cereal, but, since its seeds serve the same purposes as the cereal grains, it is usually classed in market reports among the cereals. The family to which buckwheat belongs includes several well-known troublesome weeds, such as sorrel, dock, smartweed, knotweed, and bindweed.

Buckwheat does run down the land if planted too frequently without any rotation and little fertilizer, but the crop is not to blame for its misuse by man; and farmers know that it is often a life-saver because it can bring in a little much needed cash, becoming a real "mortgage-lifter" at times, if there is any such animal. It is valuable also as a soil renovator, a weed destroyer, a green manure crop and as a source of honey for bees. The straw also has a little feed and fertilizer value.

About the time chestnuts bloom in the North and in the East is the time to sow buckwheat. This is usually the last few days of June and during the first week of July. Many a farm boy has had a perfectly good holiday spoiled on the Fourth by having to drag land for buckwheat.

It requires a shorter season than any other grain crop but is mighty particular as to its weather during that season. A moist and cool climate is necessary and yet it is very sensitive to cold, being easily killed by frost. The seed will germinate in a dry seed bed and it will stand plenty of heat until it begins to bloom. Then the hot sun, and hot, dry winds, particularly from the East, will blast the flowers.

A Typical Filler Crop

The crop does best on light, well drained soil, but it will thrive on a wide variety of soils, being more particular as to weather conditions than to soil. If the ground is too rich or if barnyard manure is applied too heavily, the crop will lodge.

However, buckwheat needs some fertilization and most farmers find that it pays to apply a little commercial fertilizer, particularly acid phosphate. Of late, the high cost of fertilizer has discouraged its use some with buckwheat, but if the returns from the crop will not justify at least a small application of fertilizer, then it is doubtful if it is

worth while to waste time and money on raising the crop at all.

There are three varieties of buckwheat grown in America—Common Gray, Silver Hull and Japanese. One of the Cornell reading courses says: "Seed of Silver Hull is slightly smaller and the color is lighter than that of Common Gray. It also has a glossy silver appearance. The Japanese is larger and somewhat darker than the Gray. The Japanese variety is somewhat thrifter than the others. The fresh stem has a green color and the flower seems not to be so subject to blasting from hot sunshine as the others. On this account, it is recommended in some localities to sow the Silver Hull and Japanese varieties mixed, it being said that the later and hardier will shade and protect the other from hot sunshine".

New York and Pennsylvania produce more than one-half of the total crop raised in the United States. This

country is the third largest buckwheat producing country in the world, being surpassed by Russia with over fifty-five million bushels and by France with twenty-one million bushels. The United States produces approximately sixteen and a half million bushels. These are pre-war figures. The average yield of buckwheat per acre in the United States is about 18 bushels per acre.

Compared with other grains, buckwheat is not a large factor in this country. A bulletin published by the United States Department of Agriculture says that for each bushel of buckwheat there are produced about two hundred bushels of corn, fifty bushels of wheat, eighty bushels of oats, twelve bushels of barley and four bushels of rye. Nevertheless, buckwheat has an important place in American agriculture.

Until comparatively recently, a considerable part of the buckwheat crop was used as a grain feed for animals. It is a most excellent feed for poultry, and buckwheat middlings, on account of its large percentage of protein and fats, is in great demand as a feed for dairy cows.

Goes into "Flapjacks"

In years past only a small amount of buckwheat was manufactured into flour, and most of this was consumed in the form of pancakes by farm folks. Lately, however, city people have learned to like buckwheat cakes with the result that the larger part of the crop is now ground for flour to meet the increasing demand in the cities.

The grain is harvested with an old-fashioned hand-cradle, a drop reaper, or with a self-binder. Due perhaps to the fact that buckwheat is often grown on poor and hilly land and by farmers who are unable to afford better equipment, there is still a surprisingly large acreage cut by the hand-cradle. The good cradles and the good cradlers, however, passed with the older generation, so that cutting and binding buckwheat on many farms to-day by hand is a much dreaded job.

However, if it is cut in September just before the first hard frost and set up in stooks, buckwheat makes a beautiful crop, particularly significant of the harvest time in the North and East. The highly colored straw and buckwheat stubble, dotting the fields of the hills and valleys as far as you can see in the early autumn, gives one a comfortable feeling that there will be plenty of good buckwheat pancakes with maple syrup and sausage to eat later, when those same fields are covered with snow.

An appetizing breakfast from two great farm products—

News From Among New York Farmers

Apple Growers Organize For Fruit Show — May Pool Price Announced

REPRESENTATIVES of fruit growers' associations and horticultural societies of the Eastern States, met in New York yesterday and completed a permanent organization for the big Apple Exposition and Fruit Show to be held in Grand Central Palace, New York City, next fall. New York State, Massachusetts, Connecticut, Vermont, New Hampshire, Maryland, North Carolina and Pennsylvania have already arranged to participate in a huge campaign to advertise Eastern apples and other fruit. Governor Smith just recently signed a bill passed by the last Legislature appropriating \$10,000 to assist the New York fruit growers in the educational features of the proposed Exposition.

The reports of the committees of representatives of agricultural departments, colleges of agriculture and fruit growers from other States were that in all the States mentioned, the growers were enthusiastic over the plan for bringing all the Eastern apple-growing States together in one big commercial exposition. It will not be a fancy fruit show of prize plates of apples, but a practical exhibit of commercial packages, which will show the city consumer and the city buyer what Eastern orchards have to offer.

The direction of the Exposition was placed by the delegates in the hands of a committee with the following permanent officers: Thomas E. Cross, Lagrangeville, N. Y., Chairman; A. W. Lombard, Massachusetts State Department of Agriculture, Vice Chairman; H. C. C. Miles, Connecticut Pomological Society, Secretary; H. A. Albyn, Bennington, Vt., Treasurer. In addition to these there are chairmen for each of the following States: New Hampshire, C. H. Barker; Vermont, C. L. Witherell; Massachusetts, Leslie R. Smith; Connecticut, C. L. Gold; New York, Charles G. Porter; Maryland, I. S. Rossell; North Carolina, C. O. Matthews.

Representatives of the following organizations, in addition to those already mentioned, were at the meeting: Western New York Fruit Growers' Co-operative Packing Association, Hudson Valley Fruit Growers' Co-operative Association, Clintondale, New York; Fruit Growers' Association, New York State Horticultural Society, the New York State Department of Farms and Markets, The New York Agricultural Experiment Station, Berks County Fruit Association of Reading, Pa.; and The New Jersey Horticultural Society.

The headquarters of the Fruit Show have been established at Room 1102, Grand Central Palace, New York.—H. H. JONES.

MAY POOL PRICE 52 CENTS BETTER THAN IN 1922

According to an announcement made by the Dairymen's League Co-operative Association to-day, the net pool price which its members will receive for May milk is \$1.82. This is the base pool price for one hundred pounds of milk testing 3 per cent butter fat at the 201-210 mile zone. The price which individual poolers will receive in each case will vary according to the butter fat and freight differentials.

This price is fifty-two cents higher than the pool price for May a year ago. One of the principal reasons for this, according to officials of the association, is the fact, that during recent months a larger proportion of the milk of the association has been marketed in the three higher classifications, that is, as fluid milk, sweet cream, condensed and evaporated milk and ice cream. The league is now receiving the full market prices for its manufactured products as a result of the extensive advertising and sales campaign carried on for the past three months.

During May, 90 per cent of the milk which went through the league plants was sold in Classes 1, 2 and 3. It is interesting to compare the figures for May a year ago when the league plants marketed in these higher classifications only 57 per cent of the total quantity which they handled during the month. The association announced the total

gross sales for the month of April \$6,385,769.10 of which it received for fluid milk sold to dealers \$4,666,680.97. The sales from plants operated by the association amounted to \$1,719,088.13.

BOARD OF CONTROL OF GENEVA STATION HOLDS LAST MEETING

ALVAH H. PULVER

The final meeting of the board of control of the New York State Experiment Station, before the transference of the management to the State College of Agriculture at Ithaca, was held at Geneva on June 12. The board took favorable action on appointments to several new positions created by the last Legislature, filling the vacancies on the staff. An appropriation was made by the Legislature for special investigations with fruit in the Hudson River Valley and three new positions were created to make possible the carrying on of this work.

E. V. Shear, Cornell graduate, has been appointed associate in research in plant pathology and will begin work on disease problems in the Hudson River territory at an early date. Dr. F. H. Lathrop, formerly connected with the station, but more recently engaged in research work on the insecticidal properties of sulphur for the Crop Protection Institute, has been appointed associate in research in entomology and will soon undertake investigations of insect problems peculiar to the Hudson River Valley.

COUNTY NOTES FROM AMONG NEW YORK FARMERS

Steuben Co.—Dogs still present a menace to sheep growers through this section. Early this month Griff Jack of Canisteo, lost 23 head which was the third disastrous raid made by dogs within a very short time. In addition to the animals destroyed, Mr. Jack has several animals on his hands that are seriously injured. The loss to the county will amount approximately to \$1,500, although that sum does not cover Mr. Jack's loss, for practically the entire herd was destroyed.

In Western New York

Wyoming Co.—The officers and directors of the Wyoming County Agricultural Society are planning to give tickets for the first day of the fair to each teacher and child of school age in the county. This day will be known as school day. The association has made especial effort to interest boys and girls in junior project work in making the exhibit this year one of the best ever held. At the Perry Fair, which is also in Wyoming County, all children of 12 years of age will be admitted free of charge. The annual cattle show and field day of the Pavilion and Wyoming Better Cattle Club, will be held on Quinlan Field at Pavilion, on Saturday, July 14. A judging contest will be held for the boys of the different school districts. Crops are doing well though they were a little late in getting started. Fruit seems to have set fairly well. Late cherries and apples are best, but there will not be probably, as large a crop as last year.—MRS. L. F. FENNER.

Chautauqua Co.—This section has been suffering from a serious drouth. We have only had one good rain since May 8. The nights have been very cool and low places have suffered from frost. Corn looks worse this season than it has in years. All crops are suffering from want of rain. If we get a wet spell soon we will have a fair hay crop, otherwise it will be a failure. This season the condensery is paying better prices than cheese factories. The non-poolers are a little in the lead. Farmers are not feeding cattle grain but soon will be forced to as pastures are getting short.—A. J. NORMAN.

Genesee Co.—The weather during the middle of June was a great deal better than during the first week when it was so rainy that it was impossible for farmers to work in the fields.

Farmers are particularly hard hit this year with the scarcity of help and the general backward season. Wheat is selling for \$1.30 a bushel, potatoes 80 cents, beans \$6, hay \$9 a ton, live poultry 25 cents a pound, dressed 30 cents, live calves 9 cents, dressed 12 cents, dairy butter 36 cents, creamery butter 48 cents. Eggs are 26 cents. Several farms are lying idle this summer in this section. No one wants to work them for men can get larger wages in the factories.—J. C.

In the Northern Country

St. Lawrence Co.—The weather has been cold and wet. We have had frosts on several different nights. Considerable land is under water. The outlook is quite poor for any kind of crops in this section. Hay only looks fair. Milk is bringing a fair price. Eggs are terribly low, only 27 cents.—H. S. H.

Essex Co.—Old potatoes become very scarce this spring and command as high as \$2 per bushel in this section. This spring is a late one but the weather has been favorable for getting in the crops. Meadows are looking fairly good. A good rain on June 7 and 8 helped all the crops. Veal 9 cents, eggs 20 to 25 cents. Not much call for cows. Hired help very scarce.—M. E. BURDICK.

In the Hudson Valley

Saratoga Co.—Crops are about all in. The season is late and notwithstanding recent rains, the ground seems quite dry. The fruit outlook is fairly good. Worms have done much damage to the apple trees, especially in the younger orchards. Orchardists are hard at work repairing the damage done to young fruit trees last winter by the mites. About 50 per cent of the young trees were girdled. Farmers have planted only about 50 per cent average crop, putting in only what they can care for without additional help. Cows are doing well. Butter brings 45 cents a pound wholesale, spring pigs \$5 a pair, veal 9 to 10 cents. Eggs 28 cents.—E. S. ROGERS.

Sullivan Co.—The season in this section is about three weeks behind last year. It has been unusually cold. Tent caterpillars are very numerous. Many farmers are not satisfied with the milk situation. Some have sold their cows. It is impossible to get help. No building being done. This is a great section for summer boarders, but very few cottages have been rented for the season to date. Dairy butter 50 cents, eggs 25 cents. Old potatoes \$1.50 per bushel.—MRS. C. P. MILK.

M. C. Burritt and Dr. Chandler Leave College

(Continued from page 538)

natural advantages which the soil and climate of California afford for the prosecution of his researches. He expects to devote his entire time to pomological research.

"To Vice-Director Burritt must go much of the credit for the rapid development and sound organization of the agricultural extension service as we now have it. He came to the College when the idea of the farm bureau as a resident educational service for farmers was just beginning to take shape, and his influence has been predominant in the development of this movement to its present high efficiency, including now the three-fold organization of county agricultural, home demonstration, and boys' and girls' club agents. Since 1917 he has been primarily responsible for the direction of all phases of the extension service, which has become one of the largest and most immediately useful functions of the College. For many years Professor Burritt has desired to return to the home farm, the ownership of which he has retained. After more than a decade of excellent public service his anticipations are now to be fulfilled. A man of vigor and decision, actively and intensely devoted to every sound movement which looks toward the improvement of the status of farmers, he will inevitably continue to be largely useful in many of the farmers' organizations."

Jersey Fruit Growers Open Newark Office

Pennsylvania Farm News—Long News in Short Paragraphs

TO quicken the delivery of peaches and so reduce losses to consumers in northern New Jersey this summer, the Jersey Fruit Growers' Cooperative Association, representing the organized growers of the central and southwestern New Jersey peach belt, will open an office on July 1 in Newark, N. J., in charge of Kenneth Hankinson, on leave of absence from the New Jersey State Bureau of Markets. Negotiations are under way for the establishment of offices at other large consuming points in northern New Jersey, eastern Pennsylvania and the metropolitan area of New York City as the season advances. The move is in line with the special policy of cooperating growers in eliminating waste in the marketing of this highly perishable crop, by direct grower representation which can prevent delays at important eastern cities.

A fleet of high-powered motor trucks as well as special express freight service will be employed by the association for delivery of its peaches within 100 miles of orchard packing houses, according to a separate marketing policy on nearby and distant shipments. Buyers within the motor truck or short haul will receive the peaches in a fresher and better shape than is possible under former routing methods, without representation on destination markets to quicken deliveries. The Jersey Fruit Growers have discontinued the "Blue Jay" brand name, which it used last year in distributing its peaches to the trade. At a recent Executive Committee meeting of the association, "Jersey Jerry" was officially accepted by that body as a brand name for its products this year. The Fancy and No. 1 N. J. U. S. standard peach grades will bear labels to that effect, while the No. 2 grade will be known as "domestic."

New Jersey County Notes

Dry weather of late May and early June caused serious delays in maturity of pastures, grain and berry crops in the northern part of the State, although relieved somewhat by light rains in mid-June. In Morris County the lack of rain affected grass and grain more than usual due to the cold spring, which delayed development of the crops during the early stages of their growth. The condition of oats, wheat and rye on higher fields suffered more than crops on lower levels.

Reports from Warren County indicate that a similar condition exists and that upland crops suffered more than those in the valleys. Market gardeners report delayed maturity of strawberries and early vegetables, while smaller gardeners have been benefited somewhat by the slow maturity, in that they were able to pack and market the majority of their crops despite the general lack of help.

The situation in Sussex County was not reported as serious although rain was badly needed in many sections.

Columbus Grange of Burlington County, N. J., recently voted to hold a fair again this season. This is one of the active Granges in the State, with fraternal and social events held regularly throughout the year, including the initiation of classes for granges even outside of the State. William R. Shinn was elected Lecturer of the Grange and Edward Engle was made Director.

PENNSYLVANIA DAIRYMEN FEEL MORE OPTIMISTIC

The Interstate Milk Producers' Association with 20,000 members along the Philadelphia milk shed, considered the advisability of cooperatively buying dairy feeds for its members at its recent annual meeting. No action was taken in this regard, however, it being felt that the association should make use of farmers' cooperative purchasing agencies already in existence and operating successfully in the State.

Reports from country shipping points indicate that the recent increase of three-fourths of a cent per quart in the price of milk as secured by the association for the late spring and early summer months, has increased the general optimism of members concerning the

association's activities. The organization has also increased the number of its testers to speed up the testing service and to provide for the steady growth of the organization, which has brought in many new members in recent months.

Pennsylvania Fruit Notes

The Berks County Fruit Growers' Association recently represented at the conference in New York City for an eastern apple show, have voted to take space in the Eastern Apple Exposition and Fruit Show to be held in New York City early next November. The Pennsylvania Horticultural Society decided not to take part in the show officially, although it is reported that some of the larger grower members may exhibit as individuals.

Early June estimates on the Pennsylvania apple crop place the production this year at 11,645,797 bushels. The estimated yield of peaches will be 1,699,337 bushels, and of pears 634,351. The condition of apples, peaches and pears was reported at 94 per cent of normal yield; plums and cherries indicate 94 per cent of a normal crop.

Other Keystone Farm Notes

Cooperative buying so that individual farmers may make a saving incident to purchasing in a large way, has been developed within the year at various places, notably in Lancaster County, which, through its Farm Bureau, has considerably extended the cooperative purchasing program adopted several years ago. Fertilizer, potatoes and spray materials constitute the chief products cooperatively ordered this year. Twelve cars of certified seed were secured for farmers of the county, from Maine, Vermont and Michigan chiefly. Over 7,400 pounds of arsenate of lead, 3,600 pounds of copper sulphate, 1,500 pounds of bordeaux and 100 pounds of nicotine sulphate were purchased for spray materials. Largest purchases were of fertilizer, consisting of 46 cars of various materials to meet county needs. Estimates placed the cooperative purchases at a total value of \$100,000.

The loss from forest fires in the State has been enormous this season and the dry weather of late May and very early June extended the period of fire danger later than in normal seasons. The Pennsylvania Forestry Department from date recently compiled reports over 82,000 acres burned to date. The cost of controlling 1,280 forest fires reported was \$31,240. Carelessness is given as one of the chief causes of forest fire. Pennsylvania officials urge full legal action against those to whom the responsibility can be traced.

The Bedford Jersey Bull Association was organized in Bedford County, Pa., with six bulls, now ordered, to start the new organization at an early date. Bedford County, which is one of the foremost Jersey sections of the State also has an organization known as the Everett Jersey Bull Association, now owing five animals and shortly to complete arrangements for the purchase of others.

Dauphin Grange Growing

On Saturday, June 16 a delegation from Success Grange of Dauphin, Pa., headed by Master H. L. Bicker, attended the annual picnic of the Juniata Pomona Grange held on the fair grounds at Port Royal, Pa. Success Grange started with twenty members only a few years ago. It now has well over 100 members. Among the most recent additions is Robert P. Bliss of the Pennsylvania Free Library Commission, which is doing excellent work in placing good books in the hands of the rural population.—C. H. FOREST.

LONG NEWS IN SHORT PARAGRAPHS

Contrary to the usual belief, exports of the leading farm crops have been much greater since the war than before, and larger even than they were during the war. The exports of the eight principal food crops, corn, wheat, oats, barley, rye, buckwheat, rice and potatoes, measured in bushels, were greater

by 18 per cent for 1920-1922, inclusive, than they were during the war years, 1915-1919, inclusive. Exports of canned milk, however, are less than they were during the war. Farmers' market troubles are evidently not in the export situation, but rather in the larger production. In the case of the eight crops named, the average annual production in bushels was 16 per cent greater during the years 1920-22, inclusive, than during the pre-war years, and 2 per cent greater than during the war years.

* * *

Mount Etna, arising nearly eleven thousand feet above the sea, on the eastern coast of Sicily, the largest active volcano in Europe, has broken forth in the most terrible volcanic eruptions in a generation. Great seas of molten lava miles wide flow slowly but irresistibly down the mountainside and into fertile farm lands, destroying the green fields, orange groves and vineyards and wiping out old villages. The air in every direction for miles is filled with dust and sulphurous gases, darkening the sun. Flames from the eruptions can be seen for more than eighty miles.

The roads are gorged with pathetic refugees who have left their homes and their beautiful little farms to escape the great scourge.

* * *

Connecticut has a law against daylight savings with teeth in it. "No person, firm or corporation, organization or association, shall wilfully display in or on any public building or on any street, avenue or public highway any time measuring instrument or device which is calculated or intended to furnish time to the general public so as to intentionally indicate any other than standard time. Any person or organization violating any part of this act shall be fined no more than one hundred dollars." A similar law exists in New Hampshire with a five hundred dollar fine for violation. Evidently those who fool with the time in these States will get fooled.

* * *

My skin was wan and buttery, my ears were full of buzz, my heart was weak and muttery, my tongue was full of fuzz. Depression weighed upon me, but now I'm feeling fine. My blessings, then, upon thee, oh herds of lowing kine, which give the food sustaining that keeps me thisaway. I'm through with all complaining. I drink a quart a day!—SHORTS AND MIDLINGS.

* * *

Germany now has 4,652,125 farmers who are members of cooperative organizations. There has been a steady growth among German farmers of the cooperative idea since 1895.

* * *

Danish farmers have, temporarily at least, lost their British butter market. Large importations in England of New Zealand butter caused a sudden sharp drop of butter prices in the British Isles.

* * *

The production of maple products is falling off rapidly, chiefly because of the destruction of maple trees by the insect known as the maple case-bearer. Dr. Glenn W. Herrick of Cornell says that there is a reasonable possibility of controlling this insect by thoroughly dusting the infested grove with arsenate of lead, by means of an aeroplane. If you own a maple grove, you may be interested in reading the bulletin which you can get by sending a postal card to the State College of Agriculture, at Ithaca asking for Bulletin 417.

* * *

Charles W. Pugsley, Assistant Secretary of the United States Department of Agriculture, has resigned effective October 1, to become president of the South Dakota College of Agriculture.

* * *

The forty-eighth annual meeting of the Ayrshire Breeders' Association was held at Saratoga Springs, New York June 13 with the largest attendance in the history of the association. Consignment sale on the preceding day of forty-four red and whites brought \$12,565.

If it is farm news, you will see it in the American Agriculturist.

Opportunity Calls from CANADA

Visit Canada this summer—see for yourself the opportunities which Canada offers to both labor and capital—rich, fertile, virgin prairie land, near railroads and towns, at \$15 to \$20 an acre—long terms if desired. Wheat crops last year the biggest in history; dairying and hogs pay well; mixed farming rapidly increasing.

Homeseekers' Rates on Canadian Railroads

If you wish to look over the country with a view to taking up land get an order from the nearest Canadian Government Agent for special rates on Canadian railroads. Make this your summer outing—Canada welcomes tourists—no passports required—have a great trip and see with your own eyes the opportunities that await you.

FOR SALE—Registered Hampshire pigs; \$10 each. W. E. BARTHOLOMEW, Savona, N. Y.

TURKEYS

TURKEY EGGS—mammoth bronze, bourbon red, Narragansett, white holland. 15 reasons why we have the greatest bargain for you. Write WALTER BROS., Powhatan Point, Ohio.

The Rural Health Problem

(Continued from page 535)

it means deprivation of the company of his children, great expense and anxiety. Lectures for adults, concerts, theatrical and operatic presentations are rare, while the city physician may pick among many to suit his taste or that of his family. It is true that the movies, and recently the radio, have brought some relief, but it is still pitifully inadequate.

Social intercourse is limited and the opportunities of improving or polishing manners and poise are few. Besides, social relations are apt to be cramped, intolerant and gossipy, when everybody knows everybody else's business and can "listen in" on the phone. Many a country physician has had to throw up his practice owing to idle gossip.

No Opportunity to Continue Studies

Owing to the expenditure of practically all his time attending to a few patients, the country doctor has not enough leisure left to keep abreast of medical progress. Not only has he no time for general literature; but even the essential articles in the professional journals remain unread. He rapidly becomes a "back number."

The peculiarities of country practice, prevent him taking any post-graduate courses and he sinks in the depressing rut of daily routine. Many rural physicians do not practice modern medicine, but that of thirty or forty years ago. As there are no chances of professional advancement or specialization, his worth as a scientific medical man decreases, instead of increasing with the years. Neither are there chances for him of getting those positions of honor or emoluments which fall to the lot of his city colleague.

While the urban physician has regular office hours and may leave his practice in charge of a colleague during vacation, the man who practices in the country must always be on duty. As his patients often come from great distances to see him, he must be ready to attend them at any time. We must all "let up" occasionally from the daily grind and the failure to do so exacts a heavy toll from our nervous energy.

The country physician suffers from a sense of inferiority, which has its effect upon his morale, although he may not show it or even cheerfully deny or disguise it. The lack of diagnostic facilities such as the X-ray and other laboratory tests, discourages him from making any definite diagnoses and he falls into the pernicious habit of leaving the cure to nature with results that are often disastrous.

All the reasons enumerated above which deter physicians from settling

in rural districts may be simplified to one common denominator, namely: the lack of financial returns. Or, as the editor of the American Agriculturist so aptly and tersely puts it: "It goes back to a question of dollars and cents." If the farmers could get better returns for their crops, they would be able to build better roads, maintain small rural hospitals and laboratories, employ a nurse and technician, make sanitary improvements and even guarantee the doctor a certain yearly income, sufficient for his wants and those of his family.

However, as matters stand now and until the farmers have learned to work cooperatively, no immediate solution of the rural health problem could be expected without outright or at least partial aid from the State. Legislation is urgently needed to remedy a state of affairs which is fast becoming dangerous to the health and life of the rural population. Every year there are thousands of lives lost and hundreds of thousands of disabilities which could have been prevented by a more adequate system of rural health organization.

At the next session of the legislature, it is imperative that a bill be passed that every district in the State receive a subsidy covering partly or entirely, as the case may be, the erection of a small hospital and laboratory, a nurse, a laboratory technician and a physician. The nurse could do the necessary home visiting and the physician could be appointed school inspector and health officer. The certification of the districts and the details of administration could be left to the State department of health, acting in conjunction with the local authorities and the bill should contain sufficient safeguards to prevent its provisions from becoming a "pork barrel."

It is, therefore, incumbent upon every farmer to write to his assemblyman and senator asking them to support any bill subsidizing health centers in the rural districts. We are fortunate in having a governor whose interest in the matter will go far towards solving the rural health problem in the State of New York.

The Aftermath of the War

(Continued from page 534)

controlling power to attain that satisfaction both as to reparation and security that was assured her by all the powers that made the Treaty of Versailles, even if it takes another war to accomplish it. It is now, while their army is intact and directed by the greatest existing General Staff, that France will insist upon a conclusion. They will not delay it for years, during which they would have to bear the tremendous expense of maintaining their army, while Germany, free from that incubus, would be restoring her mercantile marine and re-establishing her manufacturing interests and international commerce.

We, here, might as well realize that our failure to ratify the Treaty of Versailles or to enter into a separate treaty with France securing her against future aggressive attacks by Germany, has prevented the establishment of Peace, and that Europe is again in a practical state of war, which at any moment may lead to further bloodshed and all the horrible incidents of war.

A. A. TO BROADCAST MARKET REPORTS

American Agriculturist is cooperating with the New York State Department of Farms and Markets and with the broadcasting station WEAJ to broadcast the latest information on farm prices and conditions every Tuesday, Wednesday, Thursday and Friday, at 10:50 A.M., standard time. If you use this service it may save you a lot of money. If you do not have a radio, ask your neighbor who does have one to give you the service over the telephone.

Of the many papers I read, I like yours the best.—Lott Hall, Gouverneur, N. Y.

HELP WANTED

WANTED AT ONCE—Men (single, or married men with small families) to work in modern cow barn. Wages \$60 to \$70 per month and board. Good chance for advancement. Large herd of registered Holsteins. WINTER-THUR FARMS, Winterthur, Delaware.

WANTED—Single man to work on dairy farm through July and August; \$60 per month and board. Milking machine used. Give good references. HARRY E. O'CONNOR, Pleasant View Farm, New Kingston, Delaware Co., N. Y.

ALL men, women, boys, girls, 17 to 60, willing to accept Government positions, \$117-\$190, traveling or stationary, write MR. OZMENT, 258 St. Louis, Mo., immediately.

SITUATION WANTED

COMPETENT FARM OR ESTATE Manager desires change. Refined, well educated, reliable, married. Highest references. BOX 50, Ticonderoga, N. Y.

TWENTY TONS HARDWOOD ASHES delivered your railway station, \$400. GEORGE STEVENS, Peterborough, Ontario.

FOXES WANTED—Young or old ones. ROSS BROWN, McFall, Ala.

The Brown Mouse — By Herbert Quick

"ALL right," reiterated the colonel. "But why?"

"Oh," said Jennie, "I want to see whether I can talk Jim out of some of his foolishness."

"You want to line him up, do you?" said the colonel. "Well, that's good politics, and incidentally, you may get some good ideas out of Jim."

"Rather unlikely," said Jennie.

"I don't know about that," said the colonel, smiling. "I begin to think that Jim's a Brown Mouse. I've told you about the Brown Mouse, haven't I?"

"Yes," said Jennie. "You've told me. But Professor Darbishire's brown mice were simply wild and incorrigible creatures."

"Justin Morgan was a Brown Mouse," said the colonel. "And he founded the greatest breed of horses in the world."

"You say that," said Jennie, "because you're a lover of the Morgan horse."

"Napoleon Bonaparte was a Brown Mouse," said the colonel. "So was George Washington, and so was Peter the Great. Whenever a Brown Mouse appears he changes things in a little way or a big way."

"For the better, always?" asked Jennie.

"No," said the colonel. "The Brown Mouse may throw back to slant-headed savagery. But Jim . . . sometimes I think Jim is the kind of Mendelian segregation out of which we get Franklins and Edisons and their sort. You may get some good ideas out of Jim. Let us have them here for Christmas, by all means."

In due time Jennie's invitation reached Jim and his mother, like an explosive shell fired from a distance into their humble dwelling. Mrs. Irwin had long since regarded herself as quite outside society. To be sure, for something like half of this period, she had been of society if not in it. She had done the family washings, scrubbing and cleanings, had made the family clothes and been a woman of all work, passing from household to household, in an orbit determined by the exigencies of threshing, harvesting, illness and child-bearing. And when Jim, having absorbed everything which the Woodruff school could give him in the way of education, found his first job at "making a hand," Mrs. Irwin, at her son's urgent request, ceased going out to work for a while, until she could get back her strength. This she had never succeeded in doing, and for a dozen years or more had never entered one of the houses in which she had formerly served.

"I can't go, James," said she; "I can't possibly go."

"Oh, yes, you can! Why not?" said Jim. "Why not?"

"You know I don't go anywhere," urged Mrs. Irwin.

"That's no reason," said her son.

"I haven't a thing to wear," said Mrs. Irwin.

"Nothing to wear!"

I WONDER if any ordinary person can understand the shock with which Jim Irwin heard those words from his mother's lips. He was approaching thirty, and the association of the ideas of Mother and Costume was foreign to his mind. Other women had surfaces different from hers, to be sure—but his mother was not as other women. She was just Mother, always at work in the house or in the garden, always clothed in the grays, gray-blues, neutral stripes and checks which were cheap and common and easily made. Clothes! Jim had never given the thing a thought further than to wear out his Sunday best in the schoolroom, to wonder where the next suit of Sunday best was to come from, and to buy for his mother the cheap and common fabrics which she fashioned into garments.

"Why, mother," said he, "I think it would be pretty hard to explain to the Woodruffs that you stayed away because of clothes. They have seen you in the clothes you wear pretty often for the last thirty years!"

Was a woman ever quite without a costume?

Mrs. Irwin gazed at vacancy for a while, and went to the old bureau. From the bottom drawer she took an old, old black alpaca dress—a dress which Jim had never seen. She spread it out on her bed in the alcove off the combined kitchen, parlor and dining-room in which they lived, and smoothed out the wrinkles. It was almost whole, save for the places where her body, once so much fuller than now, had drawn the threads apart—under the arms, and at some of the seams—and she handled it as one deals with something very precious.

"I never thought I'd wear it again," said she, "but once. I've been saving it for my last dress. But I guess it won't hurt to wear it once for the benefit of the living."

Jim kissed his mother—a rare thing,

save as the caress was called for by the established custom between them.

"Don't think of that, mother," said he, "for years and years yet!"

CHAPTER X

HOW JIM WAS LINED UP

THERE is no doubt that Jennie Woodruff was justified in thinking that they were a queer couple. To be sure, Jim's clothes were not especially noteworthy, being just shiny, and frayed at cuff and instep, and short of sleeve and leg, and ill-fitting and cheap. They betrayed poverty, and the inability of a New York sweatshop to anticipate the prodigality of Nature in the matter of length of leg and arm, and wealth of bones and joints which she had lavished upon Jim Irwin. But the Woodruff table had often enjoyed Jim's presence, and the standards prevailing there as to clothes were only those of plain people who eat with their hired men, buy their clothes at a county seat town, and live simply and sensibly on the fat of the land. Jim's queerness lay not so much in his clothes as in his personality.

On the other hand, Jennie could not help thinking that Mrs. Irwin's queerness was to be found almost solely in her clothes. The black alpaca looked undeniably respectable, especially when it was helped out by a curious old brooch. Jennie guessed it must have a story—a story in which the stooped, rusty, old lady looked like a character of the period just after the war. For the black alpaca dress looked more like a costume for a masquerade than a present-day garment, and Mrs. Irwin was so oppressed with knowledge that her dress didn't fit, and with the difficulty of behaving naturally—like a convict just discharged from prison after a ten years' term—that she took on a stiffness of deportment quite in keeping with the idea that she was a female Rip Van Winkle not yet quite awake. But Jennie had the keenness to see that if Mrs. Irwin could have had an up-to-date costume she would have become a rather ordinary and not bad-looking old lady. What Jennie failed to divine was that if Jim could have invested a hundred dollars in the services of tailors, haberdashers, barbers and other specialists in personal appearance, and could have blotted out his record as her father's field-hand, he would have seemed to her a distinguished-looking young man. Not handsome, of course, but the sort people look after—and follow.

"COME to dinner," said Mrs. Woodruff, who at this juncture had a hired girl, but was yoked to the oar nevertheless when it came to turkey and the other fixings of a Christmas dinner. "It's good enough, what there is of it, and there's enough of it such as it is—but the dressing in the turkey would be better for a little more sage!"

The bountiful meal piled mountain high for guest and hired help and family melted away. The colonel, in stiff starched shirt, black tie and frock coat, carved with much empressement, and Jim felt almost for the first time a sense of the value of manner.

"I had bigger turkeys," said Mrs. Woodruff to Mrs. Irwin, "but I thought it would be better to cook two turkey-hens instead of one great big gobbler

with meat as tough as tripe and stuffed full of fat."

"One of the hens would 'a' been plenty," replied Mrs. Irwin. "How much did they weigh?"

"About fifteen pounds apiece," was the answer. "The gobbler would 'a' weighed thirty, I guess. He's pure Mammoth Bronze."

"I wish," said Jim, "that we could get a few breeding birds of the wild bronze turkeys from Mexico."

"Why?" asked the colonel.

"They're the original blood of the domestic bronze turkeys," said Jim, "and they're bigger and handsomer than the pure-bred bronzes, even. They're a better stock than the northern wild turkeys from which our common birds originated."

"Where do you learn all these things, Jim?" asked Mrs. Woodruff. "I declare, I often tell Woodruff that it's as good as a lecture to have Jim Irwin at table."

There came into Jim's eyes the gleam of the man devoted to a Cause—and the dinner tended to develop into a lecture. Jennie saw a little more plainly where in his queerness lay.

"There's an education in any meal, if we would just use the things on the table as materials for study, and follow their trails back to their starting-points. This turkey takes us back to the chaparral of Mexico—"

"WHAT'S chaparral?" asked Jennie, as a diversion. "It's one of the words I have seen so often—but after all it's just a word, and nothing more."

"Ain't that the trouble with our education, Jim?" queried the colonel, cleverly steering Jim back into the track of his discourse.

"They are not even living words," answered Jim, "unless we have clothed them in flesh and blood. 'Chaparral' to Jennie is just the ghost of a word. Our civilization is full of inefficiency because we are satisfied to give our children these ghosts and shucks and husks of words, instead of the things themselves, that can be seen and hefted and handled and tested and heard."

Jennie looked Jim over carefully. His queerness was taking on a new phase—and she felt a sense of surprise such as one experiences when the conjurer causes a rose to grow into a tree before your very eyes. Jim's development was not so rapid, but Jennie's perception of it was.

"I think we lose so much time in school," Jim went on, "while the children are eating their dinners."

"Well, Jim," said Mrs. Woodruff, "everyone but you is down on the human level. The poor kids have to eat!"

"But think how much good education there is wrapped up in the school dinner—if we could only get it out."

Jennie grew grave. Here was this Brown Mouse actually introducing the subject of the school—and he ought to suspect that she was planning to line him up on this very thing—if he wasn't a perfect donkey as well as a dreamer. And he was calmly wading into the subject as if she were the ex-farm-hand country teacher, and he was the county superintendent-elect!

"Eating a dinner like this, mother," said the colonel gallantly, "is an education in itself; but just how 'larnin' is wrapped up in the school lunch is a new one on me, Jim."

"Well," said Jim, "in the first place the children ought to cook their meals as a part of the school work. Prior to that they ought to buy the materials. And prior to that they ought to keep the accounts of the school kitchen. They'd like to do these things, and it would help prepare them for life on an intelligent plane, while they prepared the meals."

"Isn't that looking rather far ahead?" asked the county superintendent-elect.

"It's like a lot of other things we think far ahead," urged Jim. "The only reason why they're far off is because we think them so. It's a thought—and a thought is as near the moment we think it as it will ever be."

"I guess that's so—to a wild-eyed reformer," said the colonel. "But go on. Have some more dressing."

"Thanks, I believe I will," said Jim.

"And a little more of the cranberry sauce. No more turkey, please."

"I'd like to see the school class that could prepare this dinner," said Mrs. Woodruff.

"Why," said Jim, "you'd be there showing them how! They'd get credits in their domestic-economy course for getting the school dinner—and they'd bring their mothers into it to help them stand at the head of their classes. And one detail of girls would cook one week, and another serve. The setting of the table would come in as a study—flowers, linen and all that. And when we get a civilized teacher, table manners!"

"I'd take on that class," said the hired man, winking at Selma Carlson, the maid, from somewhere below the salt. "The way I make my knife feed my face would be a great help to the children."

"And when the food came on the table," Jim went on, with a smile at his former fellow-laborer, "just think of the things we could study while eating it. The discussion of a meal under proper guidance is much more educative than a lecture. This breast-bone, now," said he, referring to the remains on his plate. "That's physiology. The cranberry-sauce—that's botany, and

JIM IRWIN—"THE BROWN MOUSE"

THOUGH he smiles so cheerfully, things are looking badly for Jim Irwin, former farm hand and now school teacher. Jennie Woodruff, in order to "line him up"—that is, force him to give up his plans for a school based on practical life—has invited Jim and his mother to Christmas dinner. Her father, however, has a growing respect for Jim's theories and his ability to practice them.

commerce, and soil management—do you know, Colonel, that the cranberry must have an acid soil—which would kill alfalfa or clover?"

"Read something of it," said the colonel, "but it didn't interest me much."

"And the difference between the types of fowl on the table—that's breeding. And the nutmeg, pepper and coconut—that's geography. And everything on the table runs back to geography, and comes to us linked to our lives by dollars and cents—and they're mathematics."

"We must have something more than dollars and cents in life," said Jennie. "We must have culture."

(Continued on page 544)

Summertime Is Salad Time, So Visit Your Garden

Mrs. E. B. Terbush Gives Recipes For All Sorts of Combinations and Dressings as Well

IT is no longer fashionable to have Ispring fever and take the old time remedy of molasses and sulphur. It is far better to get our sulphur and other minerals from lettuce, spinach, apples, carrots, celery, cabbage and other such foods. Just now, our system especially needs this diet of fresh foods to help cut down the protein diet which in this country is apt to be too high.

Salads are not a strictly modern dish as many may suppose. The first salad recorded is that made of hyssop of biblical fame. The broad leaves of the hyssop plant with their acid juice, not unlike our plantain, were bruised by stones and then served with an oil. Our salads of to-day follow this same principle although they are more complicated.

Every salad is composed of three parts—a garnish, which may be lettuce, watercress, celery tops, cucumbers, parsley, radishes—a body of meat, fish, vegetables, (alone or in combination), and dressing.

The Essentials of Salad Making

Fruits and vegetables for salads should always be in good condition, well cleaned and crisp. Place the vegetables in cold water till crisp, then drain on a towel and keep in a cool place till served. It is best to marinate all canned or cold vegetables before serving, which means to let them stand in French dressing in a cold place for an hour before making into a salad. Meats should be carefully cleaned of gristle, cut into cubes, and marinated like the vegetables. Onions may be cut very fine by chopping across each way many times and then slicing very thin.

Probably the two most popular dressings used are the French dressing and the mayonnaise, and these are the basis for many others. The French dressing is most commonly used for green salads and marinating, and the mayonnaise is popular on fruits and vegetables.

French Dressing

One-half teaspoon salt; ¼ teaspoon pepper; 2 tablespoons vinegar; 4 tablespoons oil. Shake well before using. A Parisian French dressing may be made by adding chopped onion, parsley, red and green peppers.

Uncooked Mayonnaise

Few grains paprika; ½ teaspoon salt; 1 teaspoon sugar; ½ teaspoon mustard; 2 egg yolks or 1 egg; 1 pint oil; 2 tablespoons lemon juice; 2 tablespoons vinegar. Mix seasonings and add yolks. Beat well, adding acid gradually and beating. Turn in oil slowly, beating constantly.

An extender will increase the amount and make less noticeable the taste of oil. For the extender, use ¼ cup vinegar; ¾ cup water; 1 teaspoon mustard; 1 tablespoon sugar; 2 tablespoons cornstarch; paprika. Add dry ingredients to liquid and cook till thick. Stir in dressing and chill.

For those who prefer a dressing without oil a simple boiled dressing may be made.

Olive oil, Wesson oil, or Mazola give very satisfactory results and the last two are generally popular because of their mild flavor and comparatively low cost. It has also been found that temperatures of intense heat or cold have no undesirable effect upon the thickening power of the oil. If the first lot does not seem to thicken, start over again with the egg, vinegar and oil, and when that begins to thicken add the other mixture and beat. If ordinary care is taken and the oil is in good condition, there should be very little "going back" of the dressing in the making. I have found that the use of the whole egg in the place of two yolks gives satisfactory results by increasing the amount of oil.

Following are a few appetizing salads including meat, vegetables and fruit. Unless otherwise given the recipe serves four persons.

Water Lily Salad

Cut the white of a hard-cooked egg from top down almost to the bottom, leaving in the shape of lily leaves. Re-

move yolk, put through sieve, mix with mayonnaise and place in center of white. Serve with mayonnaise at side. (Individual serving.)

Swiss Salad

One cup cold chicken diced; 1 cucumber diced; 1 cup peas; 1 cup chopped nut meats.

Marinate with French dressing and serve with mayonnaise.

Tomato Sandwich

Cut small ripe peeled tomato through; place slice of cream cheese between sections, cut down through center, place rounded sides together on lettuce leaf, top with a ball of cream cheese, and serve with mayonnaise. (Individual serving.)

Carrot Salad

One cup diced cooked carrots; ½ cup peas; 1 hard-cooked egg; diced onion. Marinate carrots and serve with mayonnaise dressing.

Cheese and Prune Salad

Slowly cook large prunes. Remove pits, fill with cream cheese, chill well, and serve with mayonnaise.

Peanut and Raisin Salad

Marinate 2-cups seedless raisins. Add ½ cup chopped peanuts, mix, serve on lettuce with mayonnaise.

Apple and Cabbage Salad

One and one-half cups-diced apples; 2 cups diced dates; 3 cups shredded cabbage; nutmeats. Mix with mayonnaise and serve.

These are only a very few suggestions. Meats may be combined with vegetables in many ways. Cream cheese, with nutmeats, or onions, or fruits make an excellent combination.

Salads are apt to be the result of a careful survey of your larder. They are not difficult to prepare, and when properly seasoned and crisped are fit food for the gods. Canned vegetables may be used in winter, and fresh food

in the summer, so that every season may be salad season.

RESPECT THE FLAG

"One Flag, one land, one heart, one hand, one nation ever more."

The national anniversaries on which the flag should be displayed are Washington's birthday, February 22; Lincoln's birthday, February 12; Memorial Day, May 30; Flag Day, June 14; and Independence Day, July 4. When displayed the flag should always be flown from a staff or mast if possible, and not be raised before sunrise, or left up after sunset. When used as a banner the blue field should float at the right, and if laid on a bier the blue field should be at the head.

When used for decoration, if hung vertically, the blue is at the right; when hung horizontally, the field should be at the left, and the flag should always be above the people when sitting. It should never be used as the whole or part of a costume or to drape a box or table. Bunting in red, white and blue answers this purpose. When carried, the flag should always be upright, and never allowed to touch the ground.

Every man, woman and child should know what to do when the flag passes. If standing or walking we should halt and stand at attention and a man should bare his head. If sitting we should rise and give this simple tribute to "Old Glory."—MRS. GEORGE GRAY.

THE COOK CAN GO TO CHURCH

Shown how at demonstrations in 27 counties, 784 Ohio housewives last year went home and made fireless cookers. Then, through their local bureau organizations, they passed the lesson on to countless other farm women, and in certain Ohio counties fireless cookers are now considered an indispensable piece of kitchen equipment.

Since the cookers can be used to keep

cold things cold, as well as to keep hot dishes cooking, their spread is expected to continue throughout the summer. A tinner in Auglaize County tells the agricultural agent there, that he lined 35 outer-containers of home-made cookers there last month.

A farm family in Putnam County has kept account of the amount of kerosene saved on their oil stove. Formerly they used 5 gallons of coal-oil a week. Now, using the cooker for cereals and for Sunday dinner, 5 gallons of oil last two weeks. This housewife has built a cooker which holds two pans. She starts Sunday dinner early and leaves the meat and vegetables in the bottom container, and a pudding or dried fruit in the top container, so that all is ready when the family comes back from church.

Another housewife in this county uses a second compartment in her cooker for the bread-mixer. This retains the bread at the right temperature, and raises it without the bother of shutting windows to keep the room warm enough, or of wrapping the mixer in a blanket.

When anything boils over on the stove, cover it at once with salt; the odor will be killed, and the spilled food can be cleaned up easily.

The Brown Mouse

(Continued from page 543)

"Culture," cried Jim, "is the ability to think in terms of life—isn't it?"

"Like Jesse James," suggested the hired man, who was a careful student of the life of that eminent bandit.

There was a storm of laughter at this sally amidst which Jennie wished she had thought of something like that. Jim joined in the laughter at his own expense, but was clearly suffering from argumentative shock.

"That's the best answer I've had on that point, Pete," he said, after the disturbance had subsided. "But if the James boys and the Youngers had had the sort of culture I'm for, they would have been successful stock men and farmers, instead of train-robbers. Take Raymond Simms, for instance. He had all the qualifications of a member of the James gang when he came here. All he needed was a few exasperated associates of his own sort, and a convenient railway with undefended trains running over it. But after a few weeks of real 'culture' under a mighty poor teacher, he's developing into the most enthusiastic farmer I know. That's real culture."

"It's snowing like everything," said Jennie, who faced the window.

"Don't cut your dinner short," said the colonel to Pete, "but I think you'll find the cattle ready to come in out of the storm when you get good and through."

"I think I'll let 'em in now," said Pete, by way of excusing himself. "I expect to put in most of the day from now on getting ready to quit eating. Save some of everything for me, Selma, —I'll be right back!"

"All right, Pete," said Selma.

CHAPTER XI

THE MOUSE ESCAPES

JENNIE played the piano and sang. They all joined in some simple Christmas songs. Mrs. Woodruff and Jim's mother went into other parts of the house on research work connected with their converse on domestic economy. The colonel withdrew for an inspection of the live stock on the eve of the threatened blizzard. And Jim was left alone with Jennie in the front parlor. After the buzz of conversation, they seemed to have nothing to say. Jennie played softly, and looked at nothing, but scrutinized Jim by means of the eyes which women have concealed in their back hair. There was something new in the man—she sensed that. He was more confident, more persuasive, more dynamic. She was used to him only as a static force.

(Continued next week)

THREE ONE-PIECE DRESSES OF UNUSUAL STYLE

RATHER more dressy perhaps but still in simple style is No. 1702, which like many modern dresses is suitable for either the young girl or mature woman. This model has the advantage, too, of being equally good for the slim or stout figure.

No. 1702 comes in sizes 16 years, 36, 38, 40, 42 and 44 inches bust measure. Size 36 requires 3¾ yards of 36-inch material with ¾ yard contrasting material. Price 12c.

A PRETTY, two-material house dress is No. 1656, with touches of trimming which make it suitable to wear outside the house, too. It's a slip-over, like most of the dresses today and in the loose, long waisted style.

No. 1656 comes in sizes 34, 36, 38, 40, 42 and 44 inches bust measure. The 36-inch size takes 2 yards of 36-inch material with 1¾ yards of 36-inch contrasting material. Price 12c.

THEY call this a cape-sleeve dress, because of the odd way in which the material is draped. The diagram shows how the gown is cut from one straight piece of material. It is trimmed with binding and can be so easily made that a beginner need have no fear in trying it.

No. 1721 cuts in sizes 16 years, 36, 38, and 40 inches bust measure. Size 36 requires 2¾ yards of 36-inch material with ¾ yards of binding. Price 12c.

To Order: Write your name and address plainly, enclose 12 cents in stamps for each pattern ordered and send your order to Fashion Department. Our patterns are seam-allowing and guaranteed to fit perfectly.

Our Summer Fashion Magazine contains over 300 styles, embroidery designs, dressmaking lessons and a special article, "What to Pack Away in Your Vacation Trunk," which advises you what is needed for the mountains, the seashore, automobiling, etc. Order your copy to-day. Price 10c.

Aunt Janet Writes About Getting In a Rut

Making Our Homes Better Places to Live In, by Taking Thought of Ourselves and Our Work

WHO was it said that a rut is only a longer and shallower grave?

In any case, it has the faculty of digging itself deeper all the time. The unfortunate woman who, years ago, fell into a comfortable groove, not so deep but that she could easily see over the edges—and of course could turn out if she wanted to—suddenly finds that all she can now see is the high wall of the rut which has completely shut her off from the great world around her.

A man said to me with a sigh the other day (and he is the sort who would loyally defend his wife's every act) "Jennie's an awfully good cook—and of course I know it's hard to plan new things—and then too, she gives me the things she knows I like—"

"What's the matter?" I interrupted. "Meals getting a little monotonous? Same desserts coming around pretty often?"

He looked at me as though I were a mind reader.

"Well—how did you guess it?" he asked. "But since you have, I'll admit I can't look chocolate pudding with whipped cream in the face any more—and it used to be my favorite and there are other things too. But Jennie's a wonderful cook—I didn't mean—"

Learn to Take a Hint

Of course he didn't mean anything else. But I knew that Jennie needed to turn out of that rut, to turn sharply before the sides get any higher. It may be that he'll drop a wistful little hint, or being a "mere man" make it not quite so gentle a one as she might like, and then Jennie's impulse will be to flare up and declare she wishes he had to plan the meals, he'd see then how hard it was. And he used to like her chocolate pudding, and anyhow, she'd only had it two or three times,—not more than three times—all this winter. Beware, Jennie! That hint ought to be very useful to you—it's a little like the flick of a whip, perhaps, but if it makes you break into a trot and turn sharply out, your little spurt of energy won't do you a bit of harm, now will it? (No, that metaphor doesn't mean that your husband rides behind and cracks the whip, though it may sound that way. He's your teammate, going right along beside you and if you sprint up a bit, he'll have to break into a trot too. So it will be good for you both. And goodness knows, he has his pet rut too, and next time you'll give the fillup that makes him see how high the sides are getting.)

There is only one way to get a wagon or automobile out of a rut in the road. Get up a good speed and make it by a sharp, quick turn that brings the wheels out at right angles. It's not always easy to manage but anything half-way is worse than useless—it may upset the whole rig.

The man who figures that he can take the rut very gradually, easing the wheels over, finds that the sides just crumble in and his wheels keep slipping back into the deep cut in the road. He'll never get out at that rate. And neither will the woman who plans to make her break to-morrow or the next week or a little at a time.

Does Your System Run You?

It may not be your menus; it may be the entire system with which you run your house. It was a good system once; it enabled you to get your work done more easily, more quickly, and gave you more free time. How did you once use that free time? To read the latest book, to chat comfortably with your neighbor, to take a walk or a trip to town just for a rest and a change. Do you use it now just to cram in more work? Do you feverishly think ahead to the extra things you can accomplish in the once cherished hour or so that had no especially piece of work assigned to it? Then your system is now running you, and all you see is the wall of your rut.

As a matter of fact, a slight rut is not such a bad thing. It helps one to drive steadily and that means greater comfort and speed. No one admires the driver who wobbles all over the

road or the scatterbrained woman who dashes from one thing to another and never finishes anything.

But there's a dangerous time, in life ruts especially, when the groove gets a little deeper each day, when each variation from the routine is a little more annoying and when one first finds it difficult to plan for variety in the program of the day and finally resents any interruptions.

Don't Glorify Your Rut

A housewife—and she was a marvellous housekeeper, there's no doubt of that—was once quite displeased with me because I suggested that she drop everything, hop into her little car and drive over to the nearby town, where a really worth while sale was in progress.

"You need the things, the drive will do you good and you can clean the silver or whatever you planned for the day some other time."

She drew herself up proudly.

"I believe that housekeeping is a business and should be run in just as systematic a way as any man's office," she said. "If I did that it would throw out my entire routine for the week and I consider that most unbusiness-like. I have an afternoon a week for shopping and this is not it."

There was no use telling her that no office in the world is so inflexible that it cannot change its system or disregard it if there comes a sudden opportunity to profit by doing so. This woman's husband lost money by her much-vaunted system, because she bought the things later and paid almost twice as much for them. But the sacred rut was undisturbed and that was really what mattered.

Do you try a new dish at least once a week? Have you the moral courage to leave the dishes or the beds because you have a chance to ride into town with a neighbor whom you don't often see? Can you lay the mending by to read the magazine article which your husband and son are discussing with such heat and then to join in the conversation by giving your own opinion in the matter? If you don't want your rut to close in on you, you must first admit that you are in one—which sometimes is more difficult for the "model housekeeper" than to get out of it after the fact is appreciated—and there you must make that sharp turn which will bring you up on a level again with life's broad highway.

Aunt Janet

"WHAT WOULD YOU DO IF?"

"ON which side of the plate should the knife go?" and "Should the hostess be served first?" are but two of many bothersome little questions. Specialists at the state college at Ithaca, say that whether a meal is elaborate or simple, its success often depends on the care with which it is served. The dining room should be swept, dusted, and aired before setting the table.

The table should be covered with a silence cloth, which may consist of table padding, a thin white blanket, or heavy cotton flannel. The center of the table cloth should be placed exactly in the center of the table, the edges falling from nine to twelve inches below the table.

The handles of the knife and the fork are placed with ends one inch from edge of table, knife at the right with sharp edge toward the plate, fork at left, tines turned up. The other pieces to be used first farthest from the plate. The knives and spoons are at right and the forks at the left.

Serve the Hostess, Then the Guests

Place the glass at the tip of the knife. The butter plate is placed at the tip of the fork and a little to the left. The napkin should be placed at the left of the forks with the folds at the upper and left hand sides.

The hostess should be served first. Dishes should be served at the left so the right hand may be used. Everything relating to a course should be

removed at its conclusion. Glasses should be filled three-fourths just before the meal is announced. Butter, relishes, etc., may be on the table when the guests are seated.

The knife should never be used to carry food to the mouth. It should be handled with the right hand and held only by the handle. A large portion of food should not be cut off at one time.

The fork is used for carrying all dry foods and many semi-solid foods (salads, vegetables, cheese dishes, etc.) to the mouth. It should be held between the thumb and first finger. Only one kind of food should be taken up on the fork at one time. The knife and fork should not be held in an upright position on the table. When not in use the fork and knife should be placed parallel across the right side of the plate and should be left in this position at the end of the meal. Never lean the point on the plate with the handle resting on the table.

The spoon is used only for food too soft to be easily handled with the fork. It should never be left standing in the cup. After stirring or sipping a beverage, the spoon should be removed and placed on the saucer or, if no saucer is used on the side of the plate. The spoon should be dipped away from one, and food should be sipped from the side.

THE PICTURES ON OUR WALLS

WE hear much about good reading and good music in our homes; but rarely anything about good pictures; yet they are a great factor in home influence. I remember reading of the woman who went to her pastor saying that her oldest son had gone to sea and now the second son wished to

we rearrange our houses, let us inspect our pictures carefully. We need not be artists to discriminate between the trashy and the good. Let the first question be: "is it natural, does it look like real things in life and nature?" and again, "does it harmonize with its surroundings?"

Choose for Simplicity and Beauty

Too many pictures spoil a good effect. Two or three really good pictures are much better than many that are inferior. As I write, I look at the walls of my living room and see a copy of Mona Lisa, one of the Madonna and Child and a pastoral scene in a plain chestnut frame. They are not over crowded and each stands out for our inspection. Special care should be taken in the selection of our frames. We should remember they are simply to contain the picture that we may be able to look at it, so they should be plain and neat, harmonizing with the colors in the picture. The chestnut frames are excellent for many pictures and plain gilt and white frames are adapted for bright water colors for the living room.

We do not need great wealth to procure good pictures. Copies of the masterpieces are obtainable at reasonable prices. If I were to suggest some for the living room I would include The Last Supper and Mona Lisa by Leonardo Da Vinci. The Sistine Madonna by Raphael seems to cast a spell on all who behold it. Pharaoh's Horses, The Angelus, Hanging Of The Crane, and all landscape and pastoral scenes which are true to nature are appropriate.—MRS. GEORGE GRAY.

"DID YOU EVER TRY?"

ONE of the greatest helps for the busy housewife is the use of an old-fashioned piano or organ stool in the kitchen for work that can be accomplished while sitting as well as standing. It is invaluable when ironing since it can be raised or lowered to any desired height. One can turn to the table or stove more readily than when standing.

* * *

If varnish is spilled on white goods moisten the stain with ammonia, then put on a few drops of turpentine and roll up. In fifteen minutes it can be washed out with warm, soapy water, leaving no stain.

* * *

When there is considerable strain on a button, sew a small button on the under side, pulling the thread through the holes in the smaller button the same time it is pulled through the holes in the larger one. This takes the strain from the cloth.

* * *

Here is a good way to clean wall paper: Take equal parts salt, flour, and vinegar. Stir while cooking until thick enough to work like putty. When cool take a piece in the hand and work as you would dough and rub on wall. It cleans coal smoke and other dirt very well.

* * *

An old shirt makes a good cover for garments that are to be hung in a closet. Cut the shirt off under the arms and sew up to slip over garment. Enough opening is left to slip hanger top through.

* * *

Old wool garments that are to be remodeled should be ripped open and cleaned before storage. The chance for moths to destroy them is not so great.—MRS. W. E. FARVER.

Mother keeps discarded safety razor blades in the sewing basket and uses them for ripping and cutting threads.

POTATO GROWERS TOUR LONG ISLAND

HERSCHEL H. JONES

SWELTERING heat did not check the enthusiasm of some two hundred people who assembled at Nassau County Court House on the morning of June 20th, for the sixth annual Long Island Potato Tour. Anyone who came to this tour expecting it to be an affair of chiefly local interest, must have been surprised to find it almost international. There were men from Canada, Maine, Vermont, Wisconsin, Washington, D. C., New Jersey, Connecticut, up-State New York and I don't know how many other places outside Long Island.

Even the layman who has not acquired a speaking acquaintance with the 57 varieties of bugs and diseases that do their best to make life difficult for the potato, could get a lot out of this tour. The personal contact and exchange of information between growers, scientists, seed stock producers, dealers and educators was the outstanding accomplishment. It was a satisfaction to see the extent to which New Jersey and New York were cooperating all through the program. New Jersey's potato tour was held the first two days in the week and many of the men came on over from New Jersey to the Island for the following three days.

Attention was centered on control of insects and diseases and improvement. The first day's trip covered farms chiefly in Nassau County, where potato seed demonstrations were being conducted. After examination of the plots there were talks by various experts, with S. H. Weeks, presiding.

The Thursday tour started at Riverhead and went over to the Southside in vicinity of Southampton, Bridgehampton and Watermill, visiting the farms of L. E. Downs, H. Morgan Topping, J. C. Corwith and others. Potato marketing was discussed in the evening. Friday's trip started at Riverhead, and covered other Suffolk County farms including those of H. R. Talmadge of Riverhead, H. J. Reeve, Mattituck, Rufus W. Tuthill, Orient and T. C. Fox, Southold.

The potato fields began to show the need of rain seriously last week. The Clobber crop in Nassau County looked fine but another ten days of drought would do great damage.

SMALL FRUITS MORE PLENTIFUL

Increased receipts of strawberries tended to keep prices down last week. More than half the total supply came from New Jersey, with Delaware second, and New York fourth. The demand was comparatively light and the market continued dull and weak. Hudson Valley berries sold June 20th, best at 18¢ @ 25¢.

Cherries from Hudson Valley sections were considerably more plentiful, but mostly of ordinary quality. Following were wholesale prices, per quart, June 20: red sweet, 16¢ @ 20¢; white sweet, best, 17¢ @ 18¢; ordinary, 12½¢ @ 15¢; black sweet, 20¢ @ 22¢; red sour, best, 16¢ @ 20¢.

Heavier receipts of gooseberries with a light demand caused a weak market for them last week. Four quart baskets, sold June 20, at 75¢ to 85¢ for large; 65¢ @ 70¢ medium; 50¢ @ 60¢ for small.

LONG ISLAND CABBAGE IN

Long Island Cabbage made its first appearance for the season in the New York farmers markets last week and sold at from 8¢ to 12¢ per head. Crates of New Jersey cabbage of about 100-lbs., sold at \$3.25 to \$3.50 per crate.

Supplies of green peas from nearby sections increased. Fancy green peas sold readily at firm prices reaching as high as \$3.50 @ \$4 per bu. bag for best toward the end of the week and some fancy at \$4.25 to \$4.50.

Fancy, well headed lettuce advanced with some sales at \$2 per 32 qt. crate. Orange County lettuce sold June 21 at \$1.50 to \$2.75 per crate of 2 doz. heads. Following are wholesale prices of other nearby vegetables as sold in the farmers markets: ASPARAGUS—per doz. bunches, white and green, prime, best \$2.50 @ \$3, fancy \$3.25 @ \$3.50, culls \$1 @ \$1.25; BEETS—per bunch 5 @ 6¢; CAULIFLOWER—per slat bbl, best \$2.75 @ \$3, fancy \$3.25 @ \$3.50, fair

\$2.50, No. 2's \$1.25 @ \$1.50; CARROTS—per bunch 4 @ 5¢; ONIONS—spring per bunch 4 @ 5¢; RADISHES—per bunch, red tip 3 @ 3½¢, white tip 2½ @ 3¢, white radishes 3 @ 4¢, black radishes 4 @ 6¢; RHUBARB—per bunch 2 @ 3¢; SPINACH—per crate (32 qt.) best \$1.25 @ \$1.50, ordinary \$1.

Out of 911 carloads of potatoes received at New York in the week ending June 16, 738 came from North and South Carolina, and only four from New York State, with 49 from Maine.

EGG RECEIPTS FALL OFF

Receipts of nearby eggs in the New York market fell off slightly last week and the average quality was very much poorer. There is still a surplus of ordi-

little of which is arriving. The following were wholesale prices on broilers June 21—colored, large, 48¢ @ 50¢; colored, small, 42¢ @ 43¢; white leghorn, fancy, large, 40¢; small, 30¢ @ 35¢.

The extreme warm weather had a decided effect on the consumption of fowls, and trading in the wholesale market was dull. Fancy fowls brought from 23¢ to 24¢ per lb.

BUTTER MARKET ACTIVE

After holding off for weeks in expectation of a decline in wholesale butter prices, buyers finally began to buy in earnest last week for storage purposes. They have little time left in which to get their supplies in under the June cold storage mark, June butter

plants. There was a good deal of competition among buyers to get their supplies and premiums were offered at ¾¢ to as high as 1¼¢, or more, above the current quotation in New York City for average run flats. The result is that all these supplies that would ordinarily come into the market at this time of year have been cut off. The buyers who are not covered by a contract have to buy in the market and tend to boost the market up. This, of course, means that the contract men have to pay just that much more and so on, the prices are piled or pyramided up until the point is reached where there can be no possible speculative profit.

This happens to be a case where the farmer and the dairyman gains by an inflation of prices. The leaders in the cheese market are thinking pretty hard about how they are going to escape getting squeezed by their own economic forces. There is talk of trying to get the old up-State cheese boards revived, also of diverting trade to Wisconsin cheese.

HAY PRICES FLUCTUATE

The old story of see-sawing hay prices describes the situation in the wholesale hay market last week. Heavier receipts brought prices down. Then under the permit system, shipments will be cut off until the market cleans up accumulations. There was an oversupply of lower grades, especially the type of hay received by barge. Dark clover is hard to sell at any price. The crop seems generally to be poor. Producers of hay for market are reminded that under the new Federal grading system, greenness of color is recognized as the primary index of quality, and that early cutting has more than anything else to do with getting a grade of hay with the highest market and feed value.

DRESSED CALF MARKET DULL

Although fresh receipts of country dressed calves were rather light last week, the trade is slow and the market is not clearing. There are very few good little veals available, as usual at this time of year, and there is some call for them. Sales on June 21 were 17¢ for best quality, 16¢ for choice and poorer grades ranged down to about 10¢ and even lower.

Offerings of live calves were so light that prices were fairly steady and unchanged, with best veals bringing \$12 @ \$12.50.

League Reports Big Year's Work

(Continued from page 537)

of the resolutions were either local in character or pertained to matters which should come before the Board of Directors, or before some of the departments of the association, and were referred to them.

The following resolutions were adopted by the Resolutions Committee:

Endorse the Pool

Resolved, That at the end of two years' operation of the Dairymen's League Cooperative Association, Inc., we, the delegates in annual meeting assembled, do again affirm our unalterable belief in the soundness of the pooling plan.

Whereas, The Dairymen's League has been influential in assisting and forming the G. L. F. Exchange, we wish to call the attention of our members to the benefits and savings it has enabled the dairy farmers to effect in lowering their costs of production.

Be it resolved, That we recommend that our members give their hearty purchasing support to the efforts of the G. L. F. Exchange.

Whereas, Experience has shown that subdistrict meetings are an important link in connecting the individual producer with his parent association; and,

Whereas, It has been found that the subdistrict organization at present is underfinanced,

Be it therefore resolved, That there be a deduction of .001 in addition to the present .002 deduction for the financing of the subdistricts, and that this .001 be paid direct to the subdistrict organization.

Whereas, The Canadian Parliament has recently passed a law prohibiting the manufacture, sale, and importation of oleomargarine and other substitutes for butter in the Dominion of Canada, in the interest of the public health, agriculture, and general welfare,

Resolved, That we congratulate our cousins on the north on their wisdom and foresight, and send greetings, and,

Urge National Legislation

Resolved, That we memorialize Congress in behalf of similar legislation in this country, believing it to be in the interest of the public health, agriculture, and general welfare, upon which depend the happiness and prosperity of all nations; and,

Resolved, That we urge the prohibition of the manufacture, sale, and importation of oleomargarine and kindred products in the United States of America.

The Dairymen's League Cooperative Association, Inc., is one of the largest cooperative associations in the world. It came into being and has operated through two years of the greatest economic depression this country has ever known. It has weathered every storm and is to-day sounder in every way than it has been before. It took men of absolute honesty, of the highest integrity, and of great ability to accomplish this result.

Be it therefore resolved, That we, the representatives of 70,000 producers, take this opportunity of commending the present administration and of expressing our utmost confidence in them and in the many accomplishments they have made in the past, especially of the advertising and of the marketing of our League products, and in wishing them Godspeed and in giving them our heartiest active helpful support for the coming year.

RAILROADS AND FARMERS' CO-OPERATIVES MEET TO SOLVE MUTUAL PROBLEMS

E. C. WEATHERBY

Representing the purchasing power of approximately 25,000 cars of farm supplies per year, the managers of eight farm cooperative societies from the Northern States, east of the Mississippi, met on June 16 in Cleveland, with ten railroads, whose lines extend through the territory where these co-operatives function. The meeting was held to work out plans that would mean greater dispatch for carload shipments of farm supplies from point of manufacture to the point of consumption. There were present, representing

farmers, managers of cooperative associations who buy farm supplies co-operatively in Pennsylvania, Maryland, West Virginia, Ohio, Michigan, Indiana, New York and the New England States. H. E. Babcock, general manager of the Grange League Federation Exchange, represented New York, and Howard W. Selby, manager of the Eastern States Farmers' Exchange, represented that organization. The railroads were represented by their traffic managers or executives in charge of freight.

Among the roads present were the Boston and Maine, Boston and Albany, Baltimore and Ohio, New York Central, Grand Trunk, the Big Four, the Nickel-plate, Canadian Pacific, the Pennsylvania, the Cleveland-Cincinnati and the Chicago and St. Lawrence.

Second Big Step

This conference at Cleveland marks the second big step in effecting savings for Eastern dairymen. The first step was the conference of feeding experts from the State colleges of the East at Springfield about a year ago when standardized formulas for milk and feeding rations were suggested to the cooperative by the college authorities. The Cleveland meeting brought out that it was possible to move solid trainloads of feed with considerably greater dispatch than has been the case in past. There is nothing new in the process, for the big packing houses of Chicago have been following this procedure for some time.

In commenting on the conference, one of the railroad officials said: "This conference has given us railroad men a better understanding of the farmer's problem as it relates to the cooperative purchase of feeds and other farm supplies. It will be possible for us to serve it better through the cooperative associations that are represented here. It is, of course, the desire of railroads to have as many of its freight cars moving as is possible. The car on the siding is not earning money for us or for the shipper. The greatest mileage per day per car is the desire of every railroad.

The idea of solid trainload shipments will probably be followed in the Eastern States where a big feed pool is now being conducted.

After transportation problems were disposed of, the cooperative association met as a committee relative to holding an exhibit in the World's Dairy Congress and the National Dairy Show.

COOLEY APPOINTED NEW JERSEY FARM BUREAU SECRETARY

L. A. Cooley, Farm Demonstrator of Gloucester County, N. J., becomes Secretary of the New Jersey State Federation of County Boards of Agriculture, which is the New Jersey unit of the American Farm Bureau Federation, on July 1. He follows Dr. Frank App as General Secretary, and will promote the activities of the New Jersey Farm Bureau and further develop co-operative organization and marketing among business farmers in the State along farm bureau lines.

Pressure of other interests has necessitated release of the duties as General Secretary, which Dr. App has held, for the last two and one-half years. However, Dr. App will retain his connection as treasurer, an office to which he was elected this last January.

What was the secret of his power over men?

It is a power that YOU, too, can cultivate. Send for the free book in which Dr. Eliot tells what even 15 minutes a day will do for you

WHEREVER he went he held men spellbound. His name was known, his thoughts discussed on two continents.

Yet he was only the frail son of a New Hampshire frontiersman. It cost many a family sacrifice to send him to the crude schools of his period; *your* early educational advantages were far superior to his.

What was it that made him *the* marked man in any company? His vigorous mind and unceasing work? These are a large part of the secret of course: without them no man can progress. But there was something else. He read and *knew* good books. Not all sorts of books; not merely miscellaneous reading. There were only a few books in the home of Daniel Webster—"so few that to read them once or twice was nothing," he said, "we thought they were all to be got by heart."

But those few great books, which have lived through the centuries, Daniel Webster *knew*. And they were the foundation of all that came to him afterwards.

Four million volumes have been printed. If a man were to read from dawn to dark for a lifetime he would die before he had read even a tiny fraction of them. Among such a mass of literature how is a man to choose?

Out of these millions of volumes what few great works of travel, science, biography, history, poetry and drama are enduringly worth while?

Dr. Eliot's Five-Foot Shelf of Books

That question has been answered for you in the free book offered below. It will bring you one of the most valuable suggestions of your business life. It tells how the odd moments of your days can be made to count definitely for broader information and clearer thinking; how "the essentials of a liberal education" may be had by even the busiest man or woman in "fifteen minutes a day." It gives, in a word, the whole plan

and scope and purpose of Dr. Eliot's Five-Foot Shelf of Books.

Before you spend another penny for books; before another day of aimless reading goes by, send for the guide-book and find out

What Few Great Books Are Really Important

The free book explains how Dr. Eliot from his lifetime of reading and study, forty years of it as President of Harvard University, has selected a *wasteless* library for busy men and women. How he has put into his Five-Foot Shelf the "essentials of a liberal education," and so arranged it with notes and reading courses that even fifteen minutes a day are enough. How, in a word, any thoughtful man or woman can now get, through pleasant reading, the knowledge, the culture, the broad viewpoint which every university strives to give.

"For me," wrote one man who had sent in the coupon, "your little free book meant a big step forward; and it showed me besides the way to a vast new world of pleasure."

Every reader of this page is invited to have a copy of this handsome and entertaining little book. It is free, will be sent by mail, and involves no obligation of any sort. Merely clip the coupon and mail it to-day.
